1	Introduction: the Euler–Gauss Hypergeometric Function	1
1.1	Γ -Function	2
1.1.1	Infinite-Product Representation Due to Euler	2
1.1.2	Γ -Function as Meromorphic Function	3
1.1.3	Connection Formula	4
1.2	Power Series and Higher Logarithmic Expansion	4
1.2.1	Hypergeometric Series	4
1.2.2	Gauss’ Differential Equation	5
1.2.3	First-Order Fuchsian Equation	6
1.2.4	Logarithmic Connection	6
1.2.5	Higher Logarithmic Expansion	7
1.2.6	\mathcal{D} -Module	10
1.3	Integral Representation Due to Euler and Riemann	11
1.3.1	Kummer’s Method	11
1.4	Gauss’ Contiguous Relations and Continued Fraction Expansion	12
1.4.1	Gauss’ Contiguous Relation	12
1.4.2	Continued Fraction Expansion	13
1.4.3	Convergence	15
1.5	The Mellin–Barnes Integral	16
1.5.1	Summation over a Lattice	16
1.5.2	Barnes’ Integral Representation	16
1.5.3	Mellin’s Differential Equation	18
1.6	Plan from Chapter 2	19
2	Representation of Complex Integrals and Twisted de Rham Cohomologies	21
2.1	Formulation of the Problem and Intuitive Explanation of the Twisted de Rham Theory	21
2.1.1	Concept of Twist	21
2.1.2	Intuitive Explanation	22

2.1.3	One-Dimensional Case	23
2.1.4	Two-Dimensional Case	24
2.1.5	Higher-Dimensional Generalization	25
2.1.6	Twisted Homology Group	26
2.1.7	Locally Finite Twisted Homology Group	28
2.2	Review of the de Rham Theory and the Twisted de Rham Theory	29
2.2.1	Preliminary from Homological Algebra	29
2.2.2	Current	31
2.2.3	Current with Compact Support	33
2.2.4	Sheaf Cohomology	33
2.2.5	The Case of Compact Support	35
2.2.6	De Rham's Theorem	35
2.2.7	Duality	36
2.2.8	Integration over a Simplex	36
2.2.9	Twisted Chain	38
2.2.10	Twisted Version of § 2.2.4	39
2.2.11	Poincaré Duality	40
2.2.12	Reformulation	41
2.2.13	Comparison of Cohomologies	42
2.2.14	Computation of the Euler Characteristic	44
2.3	Construction of Twisted Cycles (1): One-Dimensional Case . .	48
2.3.1	Twisted Cycle Around One Point	48
2.3.2	Construction of Twisted Cycles	50
2.3.3	Intersection Number (i)	52
2.4	Comparison Theorem	54
2.4.1	Algebraic de Rham Complex	54
2.4.2	Čech Cohomology	55
2.4.3	Hypercohomology	56
2.4.4	Spectral Sequence	57
2.4.5	Algebraic de Rham Cohomology	58
2.4.6	Analytic de Rham Cohomology	58
2.4.7	Comparison Theorem	59
2.4.8	Reformulation	60
2.5	de Rham-Saito Lemma and Representation of Logarithmic Differential Forms	60
2.5.1	Logarithmic Differential Forms	60
2.5.2	de Rham-Saito Lemma	63
2.5.3	Representation of Logarithmic Differential Forms (i) . .	69
2.6	Vanishing of Twisted Cohomology for Homogeneous Case . . .	74
2.6.1	Basic Operators	74
2.6.2	Homotopy Formula	76
2.6.3	Eigenspace Decomposition	77
2.6.4	Vanishing Theorem (i)	78
2.7	Filtration of Logarithmic Complex	79

2.7.1	Filtration	79
2.7.2	Comparison with Homogeneous Case	80
2.7.3	Isomorphism	81
2.8	Vanishing Theorem of the Twisted Rational de Rham Cohomology	82
2.8.1	Vanishing of Logarithmic de Rham Cohomology	83
2.8.2	Vanishing of Algebraic de Rham Cohomology	83
2.8.3	Two-Dimensional Case	85
2.8.4	Example	86
2.9	Arrangement of Hyperplanes in General Position	88
2.9.1	Vanishing Theorem (ii)	88
2.9.2	Representation of Logarithmic Differential Forms (ii) ..	89
2.9.3	Reduction of Poles	93
2.9.4	Comparison Theorem	96
2.9.5	Filtration	96
2.9.6	Basis of Cohomology	98

3 Arrangement of Hyperplanes and Hypergeometric

	Functions over Grassmannians	103
3.1	Classical Hypergeometric Series and Their Generalizations, in Particular, Hypergeometric Series of Type $(n + 1, m + 1)$..	103
3.1.1	Definition	103
3.1.2	Simple Examples	104
3.1.3	Hypergeometric Series of Type $(n + 1, m + 1)$	105
3.1.4	Appell–Lauricella Hypergeometric Functions (i)	106
3.1.5	Appell–Lauricella Hypergeometric Functions (ii)	106
3.1.6	Restriction to a Sublattice	106
3.1.7	Examples	107
3.1.8	Appell–Lauricella Hypergeometric Functions (iii)	107
3.1.9	Horn’s Hypergeometric Functions	108
3.2	Construction of Twisted Cycles (2): For an Arrangement of Hyperplanes in General Position	108
3.2.1	Twisted Homology Group	108
3.2.2	Bounded Chambers	109
3.2.3	Basis of Locally Finite Homology	109
3.2.4	Construction of Twisted Cycles	112
3.2.5	Regularization of Integrals	115
3.3	Kummer’s Method for Integral Representations and Its Modernization via the Twisted de Rham Theory: Integral Representations of Hypergeometric Series of Type $(n + 1, m + 1)$	117
3.3.1	Kummer’s Method	117
3.3.2	One-Dimensional Case	117
3.3.3	Higher-Dimensional Case	118
3.3.4	Elementary Integral Representations	119

3.3.5	Hypergeometric Function of Type $(3, 6)$	121
3.3.6	Hypergeometric Functions of Type $(n + 1, m + 1)$	123
3.3.7	Horn's Cases	124
3.4	System of Hypergeometric Differential Equations	
	$E(n + 1, m + 1; \alpha)$	126
3.4.1	Hypergeometric Integral of Type $(n + 1, m + 1; \alpha)$	126
3.4.2	Differential Equation $E(n + 1, m + 1; \alpha)$	128
3.4.3	Equivalent System	133
3.5	Integral Solutions of $E(n + 1, m + 1; \alpha)$ and Wronskian	135
3.5.1	Hypergeometric Integrals as a Basis	135
3.5.2	Gauss' Equation $E'(2, 4; \alpha')$	137
3.5.3	Appell–Lauricella Hypergeometric Differential Equation $E'(2, m + 1; \alpha')$	138
3.5.4	Equation $E'(3, 6; \alpha')$	139
3.5.5	Equation $E'(4, 8; \alpha')$	140
3.5.6	General Cases	142
3.5.7	Wronskian	144
3.5.8	Varchenko's Formula	145
3.5.9	Intersection Number (ii)	147
3.5.10	Twisted Riemann's Period Relations and Quadratic Relations of Hypergeometric Functions	150
3.6	Determination of the Rank of $E(n + 1, m + 1; \alpha)$	153
3.6.1	Equation $E'(n + 1, m + 1; \alpha')$	153
3.6.2	Equation $E'(2, 4; \alpha')$	154
3.6.3	Equation $E'(2, m + 1; \alpha')$	155
3.6.4	Equation $E'(3, 6; \alpha')$	157
3.6.5	Equation $E'(n + 1, m + 1; \alpha')$	160
3.7	Duality of $E(n + 1, m + 1; \alpha)$	165
3.7.1	Duality of Equations	165
3.7.2	Duality of Grassmannians	167
3.7.3	Duality of Hypergeometric Functions	169
3.7.4	Duality of Integral Representations	169
3.7.5	Example	170
3.8	Logarithmic Gauss–Manin Connection Associated to an Arrangement of Hyperplanes in General Position	171
3.8.1	Review of Notation	171
3.8.2	Variational Formula	173
3.8.3	Partial Fraction Expansion	174
3.8.4	Reformulation	174
3.8.5	Example	177
3.8.6	Logarithmic Gauss–Manin Connection	178

4	Holonomic Difference Equations and Asymptotic Expansion	183
4.1	Existence Theorem Due to G.D. Birkhoff and Infinite-Product Representation of Matrices	184
4.1.1	Normal Form of Matrix-Valued Function	184
4.1.2	Asymptotic Form of Solutions	187
4.1.3	Existence Theorem (i)	188
4.1.4	Infinite-Product Representation of Matrices	189
4.1.5	Gauss' Decomposition	190
4.1.6	Regularization of the Product	192
4.1.7	Convergence of the First Column	194
4.1.8	Asymptotic Estimate of Infinite Product	194
4.1.9	Convergence of Lower Triangular Matrices	196
4.1.10	Asymptotic Estimate of Lower Triangular Matrices	197
4.1.11	Difference Equation Satisfied by Upper Triangular Matrices	199
4.1.12	Resolution of Difference Equations	200
4.1.13	Completion of the Proof	202
4.2	Holonomic Difference Equations in Several Variables and Asymptotic Expansion	204
4.2.1	Holonomic Difference Equations of First Order	204
4.2.2	Formal Asymptotic Expansion	205
4.2.3	Normal Form of Asymptotic Expansion	207
4.2.4	Existence Theorem (ii)	209
4.2.5	Connection Problem	210
4.2.6	Example	211
4.2.7	Remark on 1-Cocycles	213
4.2.8	Gauss' Contiguous Relations	213
4.2.9	Convergence	215
4.2.10	Continued Fraction Expansion	216
4.2.11	Saddle Point Method and Asymptotic Expansion	216
4.3	Contracting (Expanding) Twisted Cycles and Asymptotic Expansion	221
4.3.1	Twisted Cohomology	221
4.3.2	Saddle Point Method for Multi-Dimensional Case	223
4.3.3	Complete Kähler Metric	224
4.3.4	Gradient Vector Field	226
4.3.5	Critical Points	228
4.3.6	Vanishing Theorem (iii)	228
4.3.7	Application of the Morse Theory	231
4.3.8	n -Dimensional Lagrangian Cycles	232
4.3.9	n -Dimensional Twisted Cycles	239
4.3.10	Geometric Meaning of Asymptotic Expansion	240
4.4	Difference Equations Satisfied by the Hypergeometric Functions of Type $(n + 1, m + 1; \alpha)$	243
4.4.1	Bounded Chambers	243

4.4.2	Derivation of Difference Equations	245
4.4.3	Asymptotic Expansion with a Fixed Direction	250
4.4.4	Example	251
4.4.5	Non-Degeneracy of Period Matrix	251
4.5	Connection Problem of System of Difference Equations	254
4.5.1	Formulation	254
4.5.2	The Case of Appell–Lauricella Hypergeometric Functions	256
A	Mellin’s Generalized Hypergeometric Functions	261
A.1	Definition	261
A.2	Kummer’s Method	262
A.3	Toric Multinomial Theorem	264
A.4	Elementary Integral Representations	266
A.5	Differential Equations of Mellin Type	268
A.6	b -Functions	269
A.7	Action of Algebraic Torus	271
A.8	Vector Fields of Torus Action	272
A.9	Lattice Defined by the Characters	272
A.10	G-G-Z Equation	274
A.11	Convergence	276
B	The Selberg Integral and Hypergeometric Function of BC Type	279
B.1	Selberg’s Integral	279
B.2	Generalization to Correlation Functions	280
C	Monodromy Representation of Hypergeometric Functions of Type $(2, m + 1; \alpha)$	283
C.1	Isotopic Deformation and Monodromy	283
D	KZ Equation (Toshitake Kohno)	287
D.1	Knizhnik–Zamolodchikov Equation	288
D.2	Review of Conformal Field Theory	289
D.3	Connection Matrices of KZ Equation	294
D.4	Iwahori–Hecke Algebra and Quasi-Hopf Algebras	296
D.5	Kontsevich Integral and Its Application	299
D.6	Integral Representation of Solutions of the KZ Equation	303
	References	307
