A Few Words of Explanation	xi
Introduction	xiii
Terminology about: Association, Attachment, Extension	xxix
1 Some Examples of Peacocks	1
1.1 Introduction	1
1.1.1 Processes Increasing in the Convex Order and 1-Martingales ..	1
1.1.2 How to Prove the Peacock Property	14
1.2 Examples of Peacocks	18
1.2.1 Composition of Some Peacocks by a Function	18
1.2.2 Peacocks with Respect to Maturity	26
1.2.3 Peacocks with Respect to Volatility	39
1.3 Peacocks in a Gaussian Setting	46
1.3.1 A Weak Itô Formula	46
1.3.2 Examples	49
1.3.2.1 Time Changed Brownian Motion	50
1.3.2.2 Ornstein-Uhlenbeck Process	50
1.3.2.3 Brownian Bridge	51
1.3.2.4 Fractional Brownian Motion	52
1.3.3 An Application of the Weak Itô Formula	53
1.3.4 A Variant of the Weak Itô Formula	55
1.3.5 Notation	56
1.3.6 Integrals of Log-normal Processes	57
1.3.7 Examples	59
1.3.7.1 Processes $(t G_\lambda)$	59
1.3.7.2 Processes $(G_{\lambda t})$	60
1.3.7.3 Brownian Sheet	61
1.3.7.4 Stochastic Integrals	62

1.4	Peacocks in a Markovian Set-up	63
1.4.1	Conditionally Monotone Peacocks	63
1.4.2	Conditionally Monotone Processes with Independent Increments	66
1.4.2.1	The Gamma Subordinator is Conditionally Monotone	66
1.4.2.2	The Simple Random Walk is Conditionally Monotone	68
1.4.2.3	The Processes with Independent Log-concave Increments are Conditionally Monotone	69
1.4.2.4	The Poisson Process is Conditionally Monotone	71
1.4.2.5	The Random Walk with Geometric Increments is Conditionally Monotone	72
1.4.3	“Well-Reversible” Diffusions at Fixed Times	76
1.4.3.1	The Diffusion $(X_\lambda, \lambda \geq 0; \mathbb{P}_x, x \in \mathbb{R})$	76
1.4.3.2	Time-reversal at a Fixed Time	77
1.4.3.3	Our Hypotheses and the Main Result	78
1.4.3.4	A Few Examples of Diffusions which are “Well-Reversible” at Fixed Times	80
1.4.4	Another Class of Markovian Peacocks	81
	Notes and Comments	86
2	The Sheet Method	87
2.1	General Framework	87
2.2	The Brownian Sheet Method	90
2.2.1	Introduction	90
2.2.2	Some Properties of the Brownian Sheet	92
2.2.3	Main Result	93
2.3	Space-Time Harmonic Functions for the Brownian Sheet (STHBS) and Peacocks	96
2.3.1	Space-Time Harmonic Functions for the Brownian Sheet	96
2.3.2	Characterization of Space-Time Harmonic Functions for the Brownian Sheet	99
2.3.2.1	Definition of the Semi-Group $(\Pi_t, t \geq 0)$	99
2.3.2.2	Bijection between $L^1(\mathbb{P})$ and \mathcal{H}	100
2.3.3	The Processes $\Phi^{(\mathbf{M})}$ and $\Phi^{(\mathbf{P})}$	101
2.3.4	Examples	104
2.3.5	Some Natural Questions	107
2.4	The Lévy Sheet Method	114
2.4.1	Introduction	114
2.4.2	Lévy Sheet $W^{(L)}$ Extending a Lévy Process L	115
2.4.2.1	The Lévy-Khintchine Representation of L	115

2.4.2.2	The Skorokhod Space	115
2.4.2.3	The X -integral of a Rectangle R	115
2.4.2.4	Defining the Lévy Sheet $W^{(L)}$	116
2.4.2.5	A Family of Peacocks and Associated Martingales ..	117
2.4.2.6	The Semi-Group Associated to $(W_{\cdot,t}^{(L)}, t \geq 0)$	117
2.5	Space-Time Harmonic Functions for $W^{(L)}$ and Peacocks	123
2.5.1	Space-Time Harmonic Functions for L	123
2.5.2	Space-Time Harmonic Functions for $W^{(L)}$	124
2.5.3	Definitions of the Processes $\Phi^{(\mathbf{M})}(W^{(L)})$ and $\Phi^{(\mathbf{P})}(L)$	127
2.6	Peacocks and Gaussian Sheets	132
2.6.1	Gaussian Sheets	132
2.6.2	Application to Peacocks	136
	Notes and Comments	136
3	The Time Reversal Method	137
3.1	Martingales Associated to a \mathbf{F}_2 -type Peacock in a Discrete Setting ...	137
3.2	Martingales Associated to a \mathbf{F}_2 -type Peacock in a Brownian Setting .	139
3.2.1	The One-Dimensional Case	139
3.2.2	Hermite Polynomials and Peacocks	140
3.2.3	The n -Dimensional Case, $n \geq 1$	145
3.3	Harmonic Functions in $\mathbb{R}^n \setminus \{0\}$ and Peacocks	146
3.3.1	$n = 2$	148
3.3.2	$n = 3$	151
3.4	Martingales Associated to a \mathbf{F}_2 -type Peacock in a Lévy Process Framework	152
3.5	Peacocks and Martingales Indexed by Some Predictable Processes ..	154
3.5.1	Notation and Definition	154
3.5.2	Main Result	155
3.6	The Time Reversal Method in a More General Set-up	159
	Notes and Comments	162
4	The Time Inversion Method	163
4.1	Martingale Constructed from an Integrable Lévy Process by Time Inversion	163
4.2	Feller's Process and \mathbf{F}_1 -type Peacocks	165
4.2.1	Feller's Process and Second Ray-Knight Theorem	165
4.2.2	A Martingale Associated to Some Integrals of Feller's Process	165
4.2.3	Explicit Computations of Bernstein Functions	166

4.3	Continuous Space Branching Processes (CSBP) and \mathbf{F}_1 -type Peacocks	170
4.3.1	Stable CSBP with Index γ and Ray-Knight Theorems	170
4.3.2	A Martingale Associated to Some Integrals of a Stable Continuous Space Branching Process	172
4.4	A Scaling Property Extension of the Previous Results	175
4.4.1	Hypothesis and Notation	175
4.4.2	The Time Inversion Method in a More General Set-up	176
	Notes and Comments	179
5	The Sato Process Method	181
5.1	Introduction	181
5.2	Self-Decomposability and Sato Processes	182
5.3	Sato Processes and Peacocks	190
5.4	Quadratic Functionals of Bessel Processes $(R_N(t), t \geq 0)$	193
5.4.1	The Process $(R_N^2(t), t \geq 0)$	193
5.4.1.1	Self-Decomposability of $R_N^2(1)$	194
5.4.1.2	Expression of (U_t^N) from a Compound Poisson Process	194
5.4.1.3	Expression of (U_t^N) from the Local Time of a Perturbed Bessel Process	196
5.4.2	The Process $(\int_0^t R_N^2(s)ds, t \geq 0)$	197
5.4.2.1	A Class of Sato Processes	197
5.4.2.2	A Particular Case	199
5.4.2.3	Representation of $A^{(N)}$ as a Process of Hitting Times	200
5.4.3	The Process $(K^{-2} \int_0^t s^{\frac{2(1-K)}{K}} R_N^2(s)ds, t \geq 0)$	202
5.4.3.1	Perturbed Bessel Processes	202
5.4.3.2	Identification of the Sato Process Attached to $Y_{N,K}$	203
5.4.4	The Quadratic Random Variables $\int R_N^2(s)d\mu(s)$	204
5.4.4.1	Spectral Study of an Operator	204
5.4.4.2	$\mu = \sum_{j=1}^n a_j \delta_{t_j}$	207
5.4.4.3	$\mu = Ct^p 1_{[0,1]}(t)dt$	208
5.4.4.4	Representation of $\int B_s^2 d\mu(s)$	209
5.4.4.5	Representation of $\int R_N^2(s)d\mu(s)$	210
5.4.4.6	Sato Process Attached to $Y_N^{(\mu)}$	212
5.5	The Sato Sheet Method	215
5.5.1	The Sato Sheet Attached to a Self-Decomposable Random Variable	215
5.5.2	The Sato Sheet Method	216
	Notes and Comments	221

6	The Stochastic Differential Equation Method	223
6.1	M. Pierre's Uniqueness Theorem for a Fokker-Planck Equation	223
6.2	The Fokker-Planck Equation Method	229
6.3	Martingales Associated to $(\varphi(B_t), t \geq 0)$	234
6.4	Martingales Associated to Solutions of Some SDE's	237
6.5	A Variant of the Fokker-Planck Equation Method	246
6.6	Martingales Associated to the Processes $(\sqrt{t}X, t \geq 0)$	253
6.6.1	Hypotheses and Notation	253
6.6.2	Examples	256
6.6.3	Main Result	259
6.7	Peacocks and the Porous Media Equation	261
	Notes and Comments	264
7	The Skorokhod Embedding (SE) Method	265
7.1	Introduction	265
7.1.1	Skorokhod Embeddings	265
7.1.2	Skorokhod Embedding and 1-Martingales	266
7.1.3	Organization of this Chapter	266
7.2	Construction of Randomized SE's	267
7.2.1	Randomized SE's	268
7.2.1.1	Notation	268
7.2.1.2	Existence of a Randomized Stopping Time	269
7.2.1.3	Some Examples	275
7.2.2	Uniform Integrability	277
7.2.3	Construction of a Self-Similar Martingale Associated to the Process $(\sqrt{t}X, t \geq 0)$	280
7.3	Hall's Method for SE	281
7.4	The Azéma-Yor Algorithm for SE	286
7.4.1	Description of this Algorithm	287
7.4.2	Use of this Algorithm	288
7.4.3	The $(M \cdot Y)$ Condition	290
7.4.4	The $(M \cdot Y)$ Condition under a Support Hypothesis	291
7.4.4.1	Notation	291
7.4.5	Some Sufficient Conditions for $(M \cdot Y)$	297
7.4.6	Study when the Support of μ is \mathbb{R}_+	304
7.5	Bass' Method	311
7.5.1	Bass' Method for SE	311
7.5.1.1	Notation	311
7.5.1.2	The Bass Method	313
7.5.2	A Martingale Associated to $(\varphi(B_t), t \geq 0)$ for φ Odd and Increasing	314
7.5.3	Martingale Associated to $(\sqrt{t}X, t \geq 0)$	318
7.5.4	The Peacock $(\sinh(\lambda B_t), t \geq 0)$ and Bougerol's Identity	322

7.6	The Ocone Martingale Method	325
7.6.1	Description of the Method	325
7.6.2	Illustration	326
7.7	Student's Peacocks	330
	Notes and Comments	336
8	Comparison of Multidimensional Marginals	337
8.1	Introduction	337
8.1.1	Motivation	337
8.1.2	The Upper Orthant Order	338
8.2	A General Comparison Theorem for the Upper Orthant Order	339
8.2.1	Notation	339
8.2.2	The General Comparison Theorem	340
8.3	A General Comparison Theorem for the Lower Orthant Order	344
8.4	Comparison of Multidimensional Marginals in a Brownian Setting ..	346
8.4.1	Comparison of Multidimensional Marginals	346
8.4.2	Comparison of Variations	349
8.5	The Stochastic and Convex Orders	352
	Notes and Comments	357
	Open Problems	359
	List of Symbols	363
	List of Exercises	367
	References	373
	Index	383
