1	Deforestation and Its Consequences in the Asia-Pacific Region	1
	Introduction.....	1
	Forests of the Asia-Pacific Region.....	2
	Deforestation Rates.....	7
	The New Landscapes	10
	General Assessment of Degraded Lands	10
	Undisturbed or Human-Dominated Lands.....	12
	Mosaic Lands	12
	Frontier Forests	13
	Grasslands	14
	Estimates of the Area of 'Degraded' Land Potentially Available for Reforestation	16
	Assessing the Extent of Biodiversity Losses	17
	Predicting Future Extinctions	17
	Monitoring Actual Species Losses Following Deforestation	19
	Consequences of Deforestation and Biodiversity Loss.....	22
	Deforestation and Greenhouse Gases	23
	Deforestation and Watersheds.....	24
	Is the Present Protected Area Network Able to Protect Regional Biodiversity?.....	27
	Threats to Asian Protected Areas.....	28
	Protected Areas in the Pacific	30
	Conclusions.....	33
	References.....	34
2	Forest and Land Degradation in the Asia-Pacific Region	41
	Introduction.....	41
	Natural Disturbances.....	42
	Human Uses of Forests	44
	Hunting and Gathering.....	44
	Shifting Cultivation.....	45
	Sedentary Agriculture	48
	Logging	51

Environmental Determinants of Deforestation	54
The Socio-Economic Context – a Short History of Deforestation in China and Japan	55
China	55
Japan	59
Deforestation and Degradation in the Asia-Pacific Region	61
The Rise in Abandoned Former Agricultural Lands.....	62
Populations and Deforestation	62
Causes of Deforestation	64
Seven Forest and Land Degradation Case Studies.....	64
Case Study 1 – Intensive logging, Sarawak, Malaysia	65
Case Study 2 – Unregulated logging, Philippines.	66
Case Study 3 – Spontaneous settlement in Uthai Thani Province, Thailand	69
Case Study 4 – Planned agricultural settlements on the Atherton Tableland, Australia	72
Case Study 5 – The mega rice project, Central Kalimantan, Indonesia	73
Case Study 6 – Pulpwood logging in the Gogol Valley, Papua New Guinea.....	75
Case Study 7 – Changed land systems, Western Samoa.....	77
Lessons Emerging from These Case Studies	
About the Causes of Forest and Land Degradation	78
Thresholds and Forest Transitions	81
Conclusions	84
References.....	85
3 Reforestation, Conservation and Livelihoods	93
Introduction.....	93
Defining and Assessing Rural Poverty	95
Natural Forests and Livelihoods	96
Biodiversity Conservation or Livelihood Improvements?	100
Reforestation to Enhance Livelihoods and to Foster Biodiversity Conservation.....	103
Types of Reforestation	106
Some Qualifications.....	111
The Role of Land Tenure	115
Land Tenure and Reforestation.....	117
Community Forestry	120
Community Forestry Within Existing Natural Forests	120
Community Forestry on Cleared or Degraded Lands	123
Community or Private Reforestation?.....	127
Conclusions.....	128
References.....	129

4	Different Types of Reforestation.....	135
	Introduction.....	135
	A Conceptual Model of Degradation and Forest Restoration.....	136
	Choosing Between Ecological Restoration, Plantation Monocultures and Rehabilitation.....	138
	Advantages and Disadvantages of Ecological Restoration.....	139
	Advantages and Disadvantages of Plantation Monocultures.....	143
	Advantages and Disadvantages of Rehabilitation Plantings.....	144
	Degradation and Resilience.....	145
	Resilience in Social-Ecological Systems.....	147
	Building Resilience During Reforestation.....	149
	Some Problems for Those Seeking to Design Resilient Forms of Reforestation.....	150
	Conclusion.....	153
	References.....	153
5	Natural Regeneration and Secondary Forests.....	157
	Introduction.....	157
	Defining Secondary Forests.....	158
	Natural Forest Regeneration at Disturbed Sites.....	160
	Sources of Plant Colonists.....	161
	The Landscape Context and Its Influence on Seed Dispersal.....	164
	The Fate of New Seedlings Colonizing After a Disturbance.....	166
	Types of Secondary Forest Successions.....	168
	Ecosystem Services Provided by Secondary Forests.....	174
	Secondary Forests as Habitats for Old-Growth Forest Species.....	174
	Watershed Protection and Hydrological Flows.....	176
	Carbon Sequestration.....	177
	Using Natural Succession to Overcome Degradation.....	178
	Protecting the Site from Further Disturbances.....	178
	Removing Weeds and Pests.....	184
	Soil Constraints.....	185
	Source of Colonists Nearby.....	185
	Accelerating Successional Development.....	185
	Managing Established Secondary Forests.....	188
	Increasing Timber Productivity in Existing Forests.....	188
	Modifying the Composition of Secondary Forests.....	189
	Using Secondary Forests to Create Agroforests.....	196
	Types of Agroforests.....	196
	Conditions Favouring the Development of Agroforests.....	198
	The Uncertain Future of Agroforests.....	200
	Conclusions.....	202
	References.....	203

6 Monocultural Plantings	211
Introduction	211
Reasons for Establishing Plantations	212
Private Industrial Growers	212
State Forestry Agencies	213
Smallholders and Community Forestry Groups	213
Special Purpose Groups	214
Implementing Reforestation on Degraded Lands	214
The Particular Case of Mine Site Rehabilitation	221
The Standard Plantation Model	224
Limitations of This Standard Model	228
The Hazards of Monocultures	230
Species Choices	233
Fast Growing or Slow Growing Species?	234
Sources of Information on Species Choices	236
Biogeographic Distribution and Knowledge of Silvicultural Attributes	236
Traditional Knowledge and Farmer Preferences	237
Evidence from Experimental Field Trials	238
Evidence from Markets	240
Problems Needing Resolution Before Using a Wider Range of Species in Reforestation Programs	242
How to Get Seeds and High Quality Seedlings?	242
Do Some Species Need Early Shade?	244
What Are the Preferred Sites of Different Species?	245
What Are Appropriate Pruning and Thinning Schedules?	245
What Are the Growth Rates?	248
What Are Appropriate Rotation Lengths?	250
How Should Natural Regeneration Beneath the Plantation Canopy be Managed?	251
Monoculture Plantations, Biodiversity and Ecosystem Services	253
Biodiversity	253
Watershed Protection	254
Water Flows	255
Carbon Sequestration and Storage	258
Conclusions	261
References	262
 7 Mixed-Species Plantings	 269
Introduction	269
Some Potential Advantages of Mixed Species Plantations	270
Enhanced Production in Multi-Species Plantations	271
Improved Nutrition	277
Reduced Damage from Pests and Diseases	279

Financial Benefits	280
Ameliorating Site Conditions at Cleared or Degraded Sites	281
Species Functional Types.....	282
Designs for Mixed-Species Plantations	284
Cash Crop Grown Beneath a Timber Plantation.....	284
Case Study 1: Shade coffee.....	287
Uneven Aged Plantations Involving Only Trees.....	287
Case Study 2: Improving conditions at a degraded site – Vietnam	288
Case Study 3: Improving conditions at a degraded site – Malaysia	290
Case Study 4: Reducing insect damage	292
Even-Aged Plantation Using Species Grown Together on Short and Long Rotations	293
Case Study 5: Early cashflow from trees grown on short rotation – Vietnam.....	294
Case Study 6: Use of a nitrogen fixer to improve tree nutrition on infertile soils.....	296
Even-Aged Plantation with All Species Grown Together in a Single Long Rotation	297
Case Study 7: Mixtures involving Sandalwood and a host species.....	299
Case Study 8: Mixtures involving pairs of commercially attractive tree species	300
Case Study 9: Multi-species plantings involving four species; Costa Rica	301
Case Study 10: Multi-species planting involving 16 species.....	302
Case Study 11: Planting mixtures of non-commercial species to create stable and self-sustaining new forests	304
Identifying Ecologically Complementary Species.....	305
Some Management Issues.....	309
The Number and Type of Species to Use.....	309
Thinning.....	310
Rotation Length	312
Mixtures at a Landscape Scale – a Mosaic of Monocultures.....	313
Providing Ecosystem Services.....	314
Biodiversity.....	315
Soil Protection and Hydrological Flows	317
Carbon Sequestration	317
Conclusions.....	318
References.....	319
8 Ecological Restoration	325
Introduction.....	325
Re-Assembling Forest Ecosystems.....	326
Filters	327

Interactions Between Species	328
Putting Theory into Practice	330
Examples of Ecological Restoration of Tropical Forests.....	332
Case Study 1: Hong Kong.....	332
Case Study 2: Amazonia, Brazil	333
Case Study 3: North Queensland, Australia	334
Case Study 4: Chiang Mai, Thailand	335
Case Study 5: Khao Phaeng Ma, Thailand	336
Some Tentative Principles Governing the Ways in Which	
Forest Ecosystems Might Be Restored	338
In Practice	340
Nurse Tree Method	340
Framework Species Method.....	341
Maximum Diversity Method.....	342
Direct Seeding.....	344
Limitations on the Use of Direct Seeding.....	346
The Social Context.....	350
Monitoring and Adaptive Management	351
Conclusion	355
