

Contents

- 1 Introduction 1**
 - 1.1 Background Information 1
 - 1.2 The Mathematical Problem 4
 - 1.3 Controller Designs 6
 - 1.3.1 Linear Controller Design 7
 - 1.3.2 Nonlinear Controller Design 8
 - 1.4 Outline of the Book 9

- 2 Review of Linear and Nonlinear Controller Designs 13**
 - 2.1 Linear Controller Designs 14
 - 2.2 Nonlinear Controller Design 18
 - 2.3 Remarks 19

- 3 Helicopter Basic Equations of Motion 21**
 - 3.1 Helicopter Equations of Motion 21
 - 3.2 Position and Orientation of the Helicopter 25
 - 3.2.1 Helicopter Position Dynamics 26
 - 3.2.2 Helicopter Orientation Dynamics 27
 - 3.3 Complete Helicopter Dynamics 29
 - 3.4 Remarks 30

- 4 Simplified Rotor Dynamics 31**
 - 4.1 Introduction 31
 - 4.2 Blade Motion 32
 - 4.3 Swashplate Mechanism 34
 - 4.4 Fundamental Rotor Aerodynamics 36
 - 4.5 Flapping Equations of Motion 40
 - 4.6 Rotor Tip-Path-Plane Equation 42
 - 4.7 First Order Tip-Path-Plane Equations 43
 - 4.8 Main Rotor Forces and Moments 44
 - 4.9 Remarks 45

5	Frequency Domain System Identification	47
5.1	Mathematical Modeling	47
5.1.1	First Principles Modeling	48
5.1.2	System Identification Modeling	48
5.2	Frequency Domain System Identification	49
5.3	Advantages of the Frequency Domain Identification	50
5.4	Helicopter Identification Challenges	51
5.5	Frequency Response and the Coherence Function	51
5.6	The <i>CIFER</i> ® Package	54
5.7	Time History Data and Excitation Inputs	55
5.8	Linearization of the Equations of Motion	56
5.9	Stability and Control Derivatives	58
5.10	Model Identification	59
5.10.1	Experimental Platform	59
5.10.2	Parametrized State Space Model	61
5.10.3	Identification Setup	63
5.10.4	Time Domain Validation	67
5.11	Remarks	70
6	Linear Tracking Controller Design for Small-Scale Unmanned Helicopters	73
6.1	Helicopter Linear Model	73
6.2	Linear Controller Design Outline	75
6.3	Decomposing the System	77
6.4	Velocity and Heading Tracking Controller Design	80
6.4.1	Lateral–Longitudinal Dynamics	80
6.4.2	Yaw–Heave Dynamics	86
6.4.3	Stability of the Complete System Error Dynamics	89
6.5	Position and Heading Tracking	90
6.6	PID Controller Design	96
6.7	Experimental Results	98
6.8	Remarks	102
7	Nonlinear Tracking Controller Design for Unmanned Helicopters	103
7.1	Introduction	103
7.2	Helicopter Nonlinear Model	104
7.2.1	Rigid Body Dynamics	104
7.2.2	External Wrench Model	105
7.2.3	Complete Rigid Body Dynamics	108
7.3	Translational Error Dynamics	108
7.4	Attitude Error Dynamics	113
7.4.1	Yaw Error Dynamics	113
7.4.2	Orientation Error Dynamics	114
7.4.3	Angular Velocity Error Dynamics	114

7.5	Stability of the Attitude Error Dynamics	115
7.6	Stability of the Translational Error Dynamics	121
7.7	Numeric Simulation Results	126
7.8	Remarks	129
8	Time Domain Parameter Estimation and Applied Discrete Nonlinear Control for Small-Scale Unmanned Helicopters	137
8.1	Introduction	137
8.2	Discrete System Dynamics	138
8.3	Discrete Backstepping Algorithm	139
8.3.1	Angular Velocity Dynamics	140
8.3.2	Translational Dynamics	140
8.3.3	Yaw Dynamics	142
8.4	Parameter Estimation Using Recursive Least Squares	144
8.5	Parametric Model	144
8.6	Experimental Results	145
8.6.1	Time History Data and Excitation Inputs	145
8.6.2	Validation	146
8.6.3	Control Design	146
8.7	Remarks	149
9	Time Domain System Identification for Small-Scale Unmanned Helicopters Using Fuzzy Models	153
9.1	Introduction	153
9.2	Takagi–Sugeno Fuzzy Models	153
9.3	Proposed Takagi–Sugeno System for Helicopters	155
9.4	Experimental Results	156
9.4.1	Tuning of the Membership Function Parameters	156
9.4.2	Validation	157
10	Comparison Studies	161
10.1	Summary of the Controller Designs	161
10.2	Experimental Results	162
10.3	First Maneuver: Forward Flight	162
10.4	Second Maneuver: Aggressive Forward Flight	163
10.5	Third Maneuver: 8 Shaped Trajectory	170
10.6	Fourth Maneuver: Pirouette Trajectory	171
10.7	Remarks	175
11	Epilogue	181
11.1	Introduction	181
11.2	Advantages and Novelties of the Designs	182
11.3	Testing and Implementation	183
11.4	Remarks	184

Appendix	Fundamentals of Backstepping Control	185
A.1	Integrator Backstepping	186
A.2	Example of a Recursive Backstepping Design	187
