

Table of Contents

Preface	viii
Introduction. Fundamental Axioms of Continuum Mechanics	xii
 Chapter 1. Kinematics of Continua	 1
1.1. Material and Spatial Descriptions of Continuum Motion	1
1.2. Deformation Tensors and Measures	16
1.3. Polar Decomposition.	27
1.4. Rate Characteristics of Continuum Motion	38
1.5. Co-rotational Derivatives.	61
 Chapter 2. Balance Laws	 70
2.1. The Mass Conservation Law	70
2.2. The Momentum Balance Law and the Stress Tensor	75
2.3. The Angular Momentum Balance Law	86
2.4. The First Thermodynamic Law	90
2.5. The Second Thermodynamic Law	98
2.6. Deformation Compatibility Equations	113
2.7. Dynamic Compatibility Equations	120
2.8. Compatibility Equations for Deformation Rates.	122
2.9. The Complete System of Continuum Mechanics Laws	124
 Chapter 3. Constitutive Equations	 128
3.1. Basic Principles for Derivation of Constitutive Equations.	128
3.2. Energetic and Quasienergetic Couples of Tensors	128
3.3. The Principal Thermodynamic Identity.	158
3.4. Principles of Thermodynamically Consistent Determinism, Equipresence and Local Action	165
3.5. Definition of Ideal Continua	170
3.6. The Principle of Material Symmetry	173

3.7. Definition of Fluids and Solids.	180
3.8. Corollaries of the Principle of Material Symmetry and Constitutive Equations for Ideal Continua	193
3.9. Incompressible continua	238
3.10. The Principle of Material Indifference	248
3.11. Relationships in a Moving System	268
3.12. The Onsager Principle	280
 Chapter 4. Relations at Singular Surfaces	 287
4.1. Relations at a Singular Surface in the Material Description.	287
4.2. Relations at a Singular Surface in the Spatial Description	296
4.3. Explicit Form of Relations at a Singular Surface.	299
4.4. The Main Types of Singular Surfaces	303
 Chapter 5. Elastic Continua at Large Deformations	 311
5.1. Closed Systems in the Spatial Description	311
5.2. Closed Systems in the Material Description	322
5.3. Statements of Problems for Elastic Continua at Large Deformations	329
5.4. The problem on an Elastic Beam in Tension.	349
5.5. Tension of an Incompressible Beam	357
5.6. Simple Shear	363
5.7. The Lamé Problem.	370
5.8. The Lamé Problem for an Incompressible Continuum	376
 Chapter 6. Continua of the Differential Type	 381
6.1. Models A_n and B_n of Continua of the Differential Type	381
6.2. Models A_n and B_n of Fluids of the Differential Type	391
6.3. Models C_n and D_n of Continua of the Differential Type	398
6.4. The Problem on a Beam in Tension.	406
 Chapter 7. Viscoelastic Continua at Large Deformations	 411
7.1. Viscoelastic Continua of the Integral Type	411
7.2. Principal, Quadratic and Linear Models of Viscoelastic Continua	427
7.3. Models of Incompressible Viscoelastic Solids and Viscoelastic Fluids	455
7.4. Statements of Problems in Viscoelasticity Theory at Large Deformations. . .	463
7.5. The Problem on Uniaxial Deforming of a Viscoelastic Beam	472
7.6. Dissipative Heating of a Viscoelastic Continuum under Cyclic Deforming. . .	481

Chapter 8. Plastic Continua at Large Deformations	490
8.1. Models A_n of Plastic Continua at Large Deformations	490
8.2. Models B_n of Plastic Continua	517
8.3. Models C_n and D_n of Plastic Continua	531
8.4. Constitutive Equations of Plasticity Theory 'in Rates'	542
8.5. Statements of Problems in Plasticity Theory	544
8.6. The Problem on All-Round Tension–Compression of a Plastic Continuum. . .	548
8.7. The Problem on Tension of a Plastic Beam	553
8.8. Plane Waves in Plastic Continua	565
8.9. Models of Viscoplastic Continua	581
References	588
Basic Notation	591
Subject Index	594

Nonlinear Continuum Mechanics and Large Inelastic
Deformations

Dimitrienko, Y.I.

2011, XXIV, 721 p., Hardcover

ISBN: 978-94-007-0033-8
