

# Contents

- 1 Theory of Water Waves . . . . . 1**
  - 1.1 Basic Linear Equations . . . . . 1
  - 1.2 Boundary Conditions . . . . . 2
  - 1.3 Linearised Theory . . . . . 4
    - 1.3.1 Small Amplitude Waves in a Steady Current . . . . . 5
    - 1.3.2 Small Amplitude Waves in a Small Velocity Flow Field . . 7
- 2 Linear Wave Phenomena . . . . . 11**
  - 2.1 Travelling Plane Waves . . . . . 11
    - 2.1.1 Plane Waves . . . . . 11
    - 2.1.2 Wave Energy Transport . . . . . 14
  - 2.2 Cylindrical Waves . . . . . 18
  - 2.3 Harmonic Source Singularity . . . . . 20
  - 2.4 The Moving Pressure Point . . . . . 27
  - 2.5 Wave Fronts . . . . . 29
  - 2.6 Wave Patterns . . . . . 31
  - 2.7 Singularity in a Steady Current . . . . . 35
    - 2.7.1 Steady Singularity . . . . . 35
    - 2.7.2 Oscillating Singularity . . . . . 38
- 3 Boundary Integral Formulation and Ship Motions . . . . . 41**
  - 3.1 Scattering of Acoustic Waves . . . . . 41
    - 3.1.1 Direct Method . . . . . 44
    - 3.1.2 Source Distribution . . . . . 45
  - 3.2 Scattering of Free Surface Waves . . . . . 46
    - 3.2.1 Fixed Object . . . . . 47
    - 3.2.2 Direct Method . . . . . 49
    - 3.2.3 Source Distribution . . . . . 49
    - 3.2.4 Motions of a Floating Object, Ship Motions . . . . . 50
    - 3.2.5 Heave Motion of a Floating Object . . . . . 53
  - 3.3 Slow Speed Approximation . . . . . 56

<b>4</b>	<b>Second-Order Theory</b>	59
4.1	Second-Order Wave Theory	59
4.2	Wave-Drift Forces and Moments	62
4.2.1	Constant and Low Frequency Drift Forces by Means of Local Expansions	63
4.2.2	Constant Drift Forces by Means of Far-Field Expansions	65
4.3	Demonstration of Second-Order Effects, a Classroom Example	69
4.3.1	Interaction of Waves with a Vertical Wall	69
4.3.2	Forces on a Fixed Wall	71
4.3.3	Moving Wall	72
4.3.4	First-Order Motion of the Wall	73
4.3.5	Influence of the Motion on the Low Frequency Drift Force	77
4.3.6	Second-Order Motion of the Wall	77
4.3.7	Some Observations	78
<b>5</b>	<b>Asymptotic Formulation</b>	79
5.1	Thin Ship Hydrodynamics, <i>Michell</i> Theory	79
5.2	Short Wave Diffraction by a Sailing Ship	82
<b>6</b>	<b>Flexible Floating Platform</b>	87
6.1	The Finite Draft Problem	88
6.2	Semi-Analytic Solution	91
6.2.1	Semi-Infinite Platform	93
6.2.2	Strip of Finite Length	96
<b>7</b>	<b>Irregular and Non-linear Waves</b>	103
7.1	Wiener Spectrum	103
7.2	Shallow Water Theory	109
7.3	Non-linear Dispersive Waves	114
<b>8</b>	<b>Shallow Water Ship Hydrodynamics</b>	125
8.1	Thin Airfoil Theory	125
8.2	Slender Body Theory	133
8.3	Free Surface Effects	137
8.4	Ships in a Channel	146
8.5	Interaction of Ships	151
<b>9</b>	<b>Appendices: Mathematical Methods</b>	155
9.1	The Method of Stationary Phase	155
9.2	The Method of Characteristics	159
9.3	Singular Integral Equations	161
9.4	The Two-Dimensional Green's Function	162
9.5	Simplification of the Set of Algebraic Equations	163
	<b>References</b>	165
	<b>Index</b>	167

Water Waves and Ship Hydrodynamics

An Introduction

Hermans, A.J.

2011, XII, 169 p., Hardcover

ISBN: 978-94-007-0095-6
