Prologue	vii
1 The Turbulence Problem	1
1.1 The Meaning of ‘Turbulence’	1
1.2 Two Fundamental Aspects of Turbulence	2
2 The Net Energy Balance	3
3 Interchange of Energy Between States of Motion	7
4 Some Remarks	11
4.1 On the Harmonic Analysis	11
4.2 On the Concept of Isotropy	11
4.3 On the Possibility of a Universal Theory	12
5 The Spectrum of Turbulent Energy	13
5.1 The Spectrum	13
5.2 An Equation for the Spectrum	14
6 Some Preliminaries to the Development of a Theory of Turbulence	19
7 Heisenberg’s Theory of Turbulence	21
7.1 The Fundamental Equation of the Theory	21
7.2 Chandrasekhar’s Solution of (7.17) for the Case of Stationary Turbulence	23
8 Other Derivations of the $k^{-5/3}$ Law	29
8.1 Fermi’s Approach	29
8.2 Kolmogorov’s Theory	30
8.3 The Method of von Neumann	31
8.4 Conclusion	33

9	An Alternate Approach: Correlations	35
10	The Equations of Isotropic Turbulence	37
10.1	The Concept of Isotropy	37
10.2	Q_{ij} as an Isotropic Tensor	38
10.2.1	Two More Examples	39
10.3	Solenoidal Isotropic Tensors	40
10.3.1	Isotropic Vectors L_i	40
10.3.2	Further Manipulations	42
10.3.3	The Isotropic Third Order Tensor, T_{ijk}	44
11	The Karman-Howarth Equations	49
12	The Meanings of the Defining Scalars	51
13	Some Results from the Karman-Howarth Equation	55
13.1	The Taylor Microscale	55
13.2	The Study of the Decay of Turbulence	56
13.3	The Connection Between the Karman-Howarth Equation and the Kolmogorov Theory	57
13.3.1	The Double Correlation	57
13.3.2	The Triple Correlation	58
14	The Relation Between the Fourth and Second Order Correlations When the Velocity Follows a Gaussian Distribution	61
14.1	Some Properties of the Gaussian Distribution	61
14.1.1	One-Dimensional Gaussian Distribution	61
14.1.2	n -Dimensional Gaussian Function	64
14.1.3	Two-Dimensional Gaussian Function	67
14.2	Addition Theorem for Gaussian Distributions	67
14.3	Proof of (14.2)	69
15	Chandrasekhar's Theory of Turbulence	71
16	A More Subjective Approach to the Derivation of Chandrasekhar's Equation	81
17	The Dimensionless Form of Chandrasekhar's Equation	83
18	Some Aspects and Advantages of the New Theory	85
18.1	A Mathematical Justification of the Assumptions of the Heisenberg Theory	85
18.2	Compatibility with the Kolmogorov Theory	86
19	The Problem of Introducing the Boundary Conditions	89
20	Discussion of the Case of Negligible Inertial Term	91

21	The Case in Which Viscosity Is Neglected	95
22	Solution of the Non-Viscous Case Near $r = 0$	99
23	Solution of the Heat Equation	101
24	Solution of the Quasi-Wave Equation	103
25	The Introduction of Boundary Conditions	111
	Epilogue	115

The Theory of Turbulence

Subrahmanyan Chandrasekhar's 1954 Lectures

Spiegel, E.A. (Ed.)

2011, XVII, 117 p., Softcover

ISBN: 978-94-007-0116-8
