<b>1</b>	<b>Extended gravity: a primer</b>	1
1.1	Why extending gravity?	1
1.2	Cosmological and astrophysical motivation	3
1.3	Mathematical motivation	6
1.4	Quantum gravity motivation	7
1.4.1	Emergent gravity and thermodynamics of spacetime	12
1.5	What a good theory of gravity should do: General Relativity and its extensions	13
1.6	Quantum field theory in curved space	18
1.7	Mach's principle and other fundamental issues	23
1.7.1	Higher order corrections to Einstein's theory	25
1.7.2	Minimal and non-minimal coupling and the Equivalence Principle	27
1.7.3	Mach's principle and the variation of $G$	32
1.8	Extended gravity from higher dimensions and area metric approach	35
1.9	Conclusions	40
<b>2</b>	<b>Mathematical tools</b>	41
2.1	Conformal transformations	41
2.2	Variational principles in General Relativity	47
2.2.1	Geodesics	47
2.2.2	Field equations	49
2.3	Adding torsion	51
2.4	Noether symmetries	54
2.5	Conclusions	57
<b>3</b>	<b>The landscape beyond Einstein gravity</b>	59
3.1	The variational principle and the field equations of Brans-Dicke gravity	59
3.2	The variational principle and the field equations of metric $f(R)$ gravity	62
3.2.1	$f(R) = R + \alpha R^2$ theory	62
3.2.2	Metric $f(R)$ gravity in general	64

3.3	A more general class of ETGs .....	67
3.4	The Palatini formalism .....	67
3.4.1	The Palatini approach and the conformal structure of the theory .....	68
3.4.2	Problems with the Palatini formalism .....	73
3.5	Equivalence between $f(R)$ and scalar-tensor gravity .....	77
3.5.1	Equivalence between scalar-tensor and metric $f(R)$ gravity .....	77
3.5.2	Equivalence between scalar-tensor and Palatini $f(R)$ gravity .....	78
3.6	Conformal transformations applied to extended gravity .....	79
3.6.1	Brans-Dicke gravity .....	79
3.6.2	Scalar-tensor theories .....	83
3.6.3	Mixed $f(R)$ /scalar-tensor gravity .....	85
3.6.4	The issue of the conformal frame .....	86
3.7	The initial value problem .....	90
3.7.1	The Cauchy problem of scalar-tensor gravity .....	92
3.7.2	The initial value problem of $f(R)$ gravity in the ADM formulation .....	97
3.7.3	The Gaussian normal coordinates approach .....	98
3.8	Conclusions .....	106
<b>4</b>	<b>Spherical symmetry .....</b>	<b>107</b>
4.1	Spherically symmetric solutions of GR and metric $f(R)$ gravity .....	107
4.1.1	Spherical symmetry .....	108
4.1.2	The Ricci scalar in spherical symmetry .....	109
4.1.3	Spherical symmetry in metric $f(R)$ gravity .....	110
4.1.4	Solutions with constant Ricci scalar .....	112
4.1.5	Solutions with $R = R(r)$ .....	115
4.1.6	Perturbations .....	117
4.1.7	Spherical symmetry in $f(R)$ gravity and the Noether approach .....	119
4.1.8	Noether solutions of spherically symmetric $f(R)$ gravity .....	124
4.1.9	Non-asymptotically flat and non-static spherical solutions of metric $f(R)$ gravity .....	128
4.2	Spherical symmetry in scalar-tensor gravity .....	134
4.2.1	Static solutions of Brans-Dicke theory .....	134
4.2.2	Dynamical and asymptotically FLRW solutions .....	136
4.2.3	Collapse to black holes in scalar-tensor theory .....	137
4.3	The Jebesen-Birkhoff theorem .....	139
4.3.1	The Jebesen-Birkhoff theorem of GR .....	139
4.3.2	The non-vacuum case .....	140
4.3.3	The vacuum case .....	142
4.3.4	The Jebesen-Birkhoff theorem in scalar-tensor gravity .....	143
4.3.5	The trivial case $\phi = \text{constant}$ .....	144

4.3.6	Static non-constant Brans-Dicke-like field .....	145
4.3.7	The Jebesen-Birkhoff theorem in Einstein frame scalar-tensor gravity .....	146
4.3.8	Hawking's theorem and Jebesen-Birkhoff in Brans-Dicke gravity.....	148
4.3.9	The Jebesen-Birkhoff theorem in $f(R)$ gravity .....	150
4.4	Black hole thermodynamics in extended gravity .....	151
4.4.1	Scalar-tensor gravity .....	153
4.4.2	Metric modified gravity .....	155
4.4.3	Palatini modified gravity .....	156
4.4.4	Dilaton gravity .....	157
4.5	From spherical to axial symmetry: an application to $f(R)$ gravity ....	158
4.6	Conclusions .....	163
<b>5</b>	<b>Weak-field limit .....</b>	<b>165</b>
5.1	The weak-field limit of extended gravity .....	165
5.2	The Newtonian and post-Newtonian approximations: general remarks .....	167
5.2.1	The Newtonian and post-Newtonian limits of metric $f(R)$ gravity with spherical symmetry .....	171
5.2.2	Comparison with the standard formalism and the chameleon effect .....	180
5.3	The Post-Minkowskian approximation .....	185
5.3.1	The energy-momentum pseudotensor in $f(R)$ gravity and gravitational radiation .....	187
5.4	Gravitational waves .....	190
5.4.1	Gravitational waves in scalar-tensor gravity .....	192
5.4.2	Gravitational waves in higher order gravity .....	195
5.5	Conclusions .....	208
<b>6</b>	<b>Qualitative analysis and exact solutions in cosmology .....</b>	<b>209</b>
6.1	The Ehlers-Geren-Sachs theorem.....	209
6.2	The phase space of FLRW cosmology in scalar-tensor and $f(R)$ gravity .....	210
6.2.1	The dynamical system .....	212
6.3	Analytical solutions of Brans-Dicke and scalar-tensor cosmology ...	220
6.3.1	Analytical solutions of Brans-Dicke cosmology .....	221
6.3.2	Exact scalar-tensor cosmologies .....	232
6.4	Analytical solutions of metric $f(R)$ cosmology by the Noether approach .....	233
6.4.1	Point-like $f(R)$ cosmology .....	233
6.4.2	Noether symmetries in metric $f(R)$ cosmology .....	235
6.4.3	Exact cosmologies .....	238
6.4.4	$c_1, c_2 \neq 0$ .....	243
6.5	Analytical cosmological solutions of $f(R, \square R, \dots, \square^k R)$ gravity .....	253

6.5.1	Higher order point-like Lagrangians for cosmology .....	253
6.5.2	The Noether symmetry approach for higher order gravities .....	256
6.6	Conclusions .....	260
<b>7</b>	<b>Cosmology .....</b>	<b>261</b>
7.1	Big Bang, inflationary, and late-time cosmology in GR .....	262
7.1.1	The standard Big Bang model .....	263
7.1.2	Inflation in the early universe .....	263
7.1.3	The present-day acceleration .....	265
7.2	Using cosmography to map the structure of the universe .....	273
7.2.1	The cosmographic apparatus .....	274
7.3	Large scale structure and galaxy clusters .....	304
7.3.1	The weak-field limit of $f(R)$ gravity and galaxy clusters .....	305
7.3.2	Extended systems .....	306
7.3.3	The cluster mass profiles .....	307
7.3.4	The galaxy clusters sample .....	310
7.3.5	The gas density model .....	310
7.3.6	Temperature profiles .....	311
7.3.7	The galaxy distribution model .....	311
7.3.8	Uncertainties in the mass profiles .....	314
7.3.9	Fitting the mass profiles .....	314
7.3.10	Results .....	316
7.3.11	Outlooks .....	321
7.4	Testing cosmological models with observations .....	326
7.4.1	Toward a new cosmological standard model .....	327
7.4.2	Methods to constrain models .....	331
7.4.3	Data samples for constraining models: large scale structure .....	336
7.4.4	Testing cosmological models: an example .....	337
7.5	Conclusions .....	345
<b>8</b>	<b>From the early to the present universe .....</b>	<b>347</b>
8.1	Quantum cosmology .....	347
8.1.1	Noether symmetries in quantum cosmology .....	350
8.1.2	Scalar-tensor quantum cosmology .....	352
8.1.3	The quantum cosmology of fourth order gravity .....	355
8.1.4	Quantum cosmology with gravity of order higher than fourth .....	359
8.2	Inflation in ETGs .....	362
8.2.1	Scalar-tensor gravity: extended and hyperextended inflation .....	362
8.2.2	Inflation with quadratic corrections .....	365
8.3	Cosmological perturbations .....	366
8.3.1	Scalar perturbations .....	367
8.3.2	Gravitational wave perturbations .....	376

8.4	Constraints on ETGs from primordial nucleosynthesis.....	381
8.5	The present universe: $f(R)$ gravity as an alternative to dark energy.....	384
8.5.1	Background universe .....	385
8.5.2	Perturbations .....	388
8.6	Conclusions .....	389
<b>A</b>	<b>Physical constants and astrophysical and cosmological parameters .....</b>	<b>391</b>
A.1	Physical constants .....	391
A.2	Conversion factors.....	392
A.3	Astrophysical and cosmological quantities.....	392
A.4	Planck scale quantities .....	393
<b>B</b>	<b>The Noether symmetry approach to <math>f(R)</math> gravity .....</b>	<b>395</b>
B.1	The field equations and the Noether vector for spherically symmetric $f(R)$ gravity .....	395
B.2	Noether symmetries in metric $f(R)$ cosmology .....	396
<b>C</b>	<b>The weak-field limit of metric <math>f(R)</math> gravity .....</b>	<b>399</b>
	<b>References.....</b>	<b>401</b>

Beyond Einstein Gravity

A Survey of Gravitational Theories for Cosmology and  
Astrophysics

Capozziello, S.; Faraoni, V.

2011, XIX, 428 p., Hardcover

ISBN: 978-94-007-0164-9
