

Contents

Part I The Basics

| | | |
|----------|--|----|
| 1 | Geometrical Background | 3 |
| 1.1 | Fields and Particles | 3 |
| 1.2 | Riemannian Manifolds | 3 |
| 1.3 | Gravity Action and Dynamical Equations | 7 |
| 1.4 | Physical Examples of Manifolds | 9 |
| 1.5 | Fiber Bundles and Matter Fields | 12 |
| 1.6 | Examples of Field Models | 18 |
| 1.7 | Isometries | 20 |
| 1.8 | Hypersurfaces and Boundaries | 21 |
| 1.9 | Defects of Geometry | 23 |
| 1.10 | Literature Remarks | 25 |
| 1.11 | Exercises | 26 |
| 2 | Quantum Fields | 29 |
| 2.1 | Relativistic Inner Product | 29 |
| 2.2 | Quantization and Single-Particle Excitations | 32 |
| 2.3 | Comments on Gauge Fields | 35 |
| 2.4 | Canonical Quantization | 37 |
| 2.5 | Quantum Theory on Stationary Backgrounds | 38 |
| 2.6 | Green's Functions | 41 |
| 2.7 | Computation of Averages | 42 |
| 2.8 | Quasinormal Modes | 44 |
| 2.9 | Literature Remarks | 46 |
| 2.10 | Exercises | 47 |

Part II Spectral Geometry

| | | |
|----------|-------------------------------------|----|
| 3 | Operators and Their Spectra | 53 |
| 3.1 | Differential Operators on Manifolds | 53 |
| 3.2 | Boundary Conditions | 57 |

| | | |
|----------|---|------------|
| 3.3 | Bounded and Compact Operators | 62 |
| 3.4 | Lorentzian Signature | 63 |
| 3.5 | Literature Remarks | 64 |
| 3.6 | Exercises | 65 |
| 4 | Heat Equation | 67 |
| 4.1 | The Heat Kernel | 67 |
| 4.2 | Asymptotics of the Heat Kernel | 68 |
| 4.3 | DeWitt Approach | 69 |
| 4.4 | Gilkey Approach | 72 |
| 4.5 | Base Manifolds with Boundaries | 80 |
| 4.6 | Base Manifolds with Codimension One Defects | 85 |
| 4.7 | Base Manifolds with Conical Singularities | 87 |
| 4.8 | Literature Remarks | 90 |
| 4.9 | Exercises | 92 |
| 5 | Spectral Functions | 95 |
| 5.1 | Where do the Spectral Functions Come From? | 95 |
| 5.2 | The Riemann Zeta-Function | 96 |
| 5.3 | Zeta-Function of an Operator | 98 |
| 5.4 | Spectral Density and Its Asymptotic Properties | 100 |
| 5.5 | Determinants of Second Order Elliptic Operators | 102 |
| 5.6 | Zeta-Function and Determinant of the Dirac Operator | 103 |
| 5.7 | Transformations of Determinants of Laplace Type Operators | 104 |
| 5.8 | Other Definitions of Determinants | 106 |
| 5.9 | Index Theory | 107 |
| 5.10 | Spectral Functions Related to Transformations of Chiral Operators | 110 |
| 5.11 | Literature Remarks | 111 |
| 5.12 | Exercises | 112 |
| 6 | Non-linear Spectral Problems | 115 |
| 6.1 | Formulation of the Problem | 115 |
| 6.2 | A Method of Finding the Spectrum | 116 |
| 6.3 | Spectral Geometry of Non-linear Spectral Problems | 117 |
| 6.4 | Derivation of Asymptotic Expansions | 118 |
| 6.5 | An Example | 121 |
| 6.6 | Asymptotically Polynomial Spectral Problems | 122 |
| 6.7 | Literature Remarks | 123 |
| 6.8 | Exercises | 124 |

Part III Applications

| | | |
|----------|--|------------|
| 7 | Effective Action | 127 |
| 7.1 | A Route from Classical to Effective Action | 127 |
| 7.2 | Statistical Physics | 129 |
| 7.3 | Effective Action and Free Energy | 131 |
| 7.4 | Complex Geometries | 136 |

| | | |
|-----------|---|------------|
| 7.5 | Renormalization | 137 |
| 7.6 | Mean Field and the Coleman-Weinberg Potential | 139 |
| 7.7 | Feynman Diagrams and Beta Functions | 141 |
| 7.8 | Gauge Fields and Ghosts | 144 |
| 7.9 | The Asymptotic Freedom in Quantum Chromodynamics | 146 |
| 7.10 | Literature Remarks | 149 |
| 7.11 | Exercises | 150 |
| 8 | Quantum Anomalies | 157 |
| 8.1 | Noether Theorems | 157 |
| 8.2 | Axial Anomaly | 160 |
| 8.3 | Lorentz Anomaly | 162 |
| 8.4 | Einstein Anomaly | 165 |
| 8.5 | Conformal Anomaly | 168 |
| 8.6 | Using Anomalies to Calculate the Effective Action | 169 |
| 8.7 | Parity Anomaly and the Chern-Simons Action | 172 |
| 8.8 | Literature Remarks | 174 |
| 8.9 | Exercises | 175 |
| 9 | Vacuum Energy | 177 |
| 9.1 | The Definition | 177 |
| 9.2 | The Casimir Effect | 178 |
| 9.3 | Calculations on the Complex Plane | 180 |
| 9.4 | Quantization of a Kink | 184 |
| 9.5 | Supersymmetric Models | 186 |
| 9.6 | Quantum Corrections to Supersymmetric Solitons | 190 |
| 9.7 | Literature Remarks | 194 |
| 9.8 | Exercises | 195 |
| 10 | Open Strings and Born-Infeld Action | 197 |
| 10.1 | Open Strings in Background Gauge Fields | 197 |
| 10.2 | Quantum Corrections for Oblique Boundary Conditions | 199 |
| 10.3 | The Born-Infeld Action and Noncommutative Coordinates | 201 |
| 10.4 | Literature Remarks | 202 |
| 10.5 | Exercises | 203 |
| 11 | Noncommutative Geometry and Field Theory | 205 |
| 11.1 | Motivations for Noncommutative Geometry | 205 |
| 11.2 | The Star Product | 206 |
| 11.3 | The Heat Trace of Operators on the Moyal Plane | 207 |
| 11.4 | Quantization of Noncommutative Solitons | 210 |
| 11.5 | Noncommutative Geometry and the Spectral Action Principle | 213 |
| 11.6 | Literature Remarks | 216 |
| 11.7 | Exercises | 217 |

Part IV Problem Solving

| | |
|--|-----|
| 12 Solutions to Exercises | 221 |
| 12.1 Chapter 1. Geometrical Background | 221 |
| 12.2 Chapter 2. Quantum Fields | 225 |
| 12.3 Chapter 3. Operators and Their Spectra | 237 |
| 12.4 Chapter 4. Heat Equation | 239 |
| 12.5 Chapter 5. Spectral Functions | 243 |
| 12.6 Chapter 6. Non-linear Spectral Problems | 247 |
| 12.7 Chapter 7. Effective Action | 248 |
| 12.8 Chapter 8. Quantum Anomalies | 261 |
| 12.9 Chapter 9. Vacuum Energy | 264 |
| 12.10 Chapter 10. Open Strings and Born-Infeld Action | 268 |
| 12.11 Chapter 11. Noncommutative Geometry and Field Theory | 271 |
| References | 273 |
| Index | 283 |

Operators, Geometry and Quanta

Methods of Spectral Geometry in Quantum Field Theory

Fursaev, D.; Vassilevich, D.

2011, XVI, 288 p., Hardcover

ISBN: 978-94-007-0204-2
