Part I Non-probabilistic and related approaches

Linear Bounds on an Uncertain Non-Linear Oscillator: An Info-Gap Approach 3
Yakov Ben-Haim and Scott Cogan

1 Introduction 3
2 Dynamics, Uncertainty and Robustness 4
3 Example: Uncertain Cubic Non-Linearity 7
4 Example: Multiple Uncertainties 10
5 Robustness as a Proxy for Probability 12
6 Conclusion 13
References 14

Quantification of uncertain and variable model parameters in non-deterministic analysis 15
Dirk Vandepitte, David Moens

1 Introduction 15
2 Numerical representation of parameter uncertainty and variability . 16
2.1 Definitions 17
2.2 Discussion and extension of the definitions 18
3 Literature review on uncertain model and material data 19
3.1 Non-probabilistic models 19
3.2 Probabilistic models 20
3.3 Material data 22
3.4 Other model properties 25
3.5 Alternative approaches: non-parametric model concept and info-gap theory 25
3.6 Summary of observations 26
4 Conclusions 26
References 27

Vibrations of layered structures with fuzzy core stiffness/fuzzy interlayer slip	29
Rudolf Heuer and Franz Ziegler	
1 Introduction	29
2 Fuzzy sandwich beams	30
2.1 Three-layer beams	30
2.2 Modal analysis of the three-layer beam, hard-hinged support	33
3 Numerical results	35
3.1 Isosceles uncertainty	35
3.2 Constraints affected to the uncertain natural frequencies .	38
3.3 Some effects of non-symmetric uncertainty	41
4 Conclusions	41
References	42
Vibration Analysis of Fluid-Filled Piping Systems with Epistemic Uncertainties	43
M. Hanss, J. Herrmann and T. Haag	
1 Introduction	44
2 Classification, Representation and Propagation of Uncertainty	44
2.1 Uncertainty Classification and Representation	44
2.2 Uncertainty Propagation Based on the Transformation Method	46
3 Fluid-Filled Piping System	48
3.1 Modeling Approach	48
3.2 Experimental Setup	51
4 Comprehensive Modeling and Simulation	51
4.1 Modeling of Epistemic Uncertainties	51
4.2 Simulation Results	53
4.3 Measures of Influence	54
5 Conclusions	55
References	55
Fuzzy vibration analysis and optimization of engineering structures: Application to Demeter satellite	57
F. Massa, A. Leroux, B. Lallemand, T. Tison, F. Buffe, and S. Mary	
1 Introduction	57
2 Aims of the study	58
2.1 Description of the study	58
2.2 Building of fuzzy optimization problem	59
3 Fuzzy vibration analysis	62
3.1 PAEM method	62
3.2 Numerical application	63
4 Fuzzy optimization	63
4.1 Design methodology	64
4.2 Improvement of the initial design	66

5	Conclusion	67
