Durability of Strain-hardening Fibre-reinforced Cement-based Composites (SHCC) – State-of-the-art	ix
Foreword	xi
1 Introduction	1
Gideon P.A.G. van Zijl and Folker H. Wittmann	
1.1 Strain-hardening Cement-based Composites (SHCC)	1
1.2 Classification and Scope	2
1.3 Fundamentals of Durability Design for SHCC	3
1.4 Crack Control as Durability Measure	4
1.5 Report Layout	6
References	7
2 Durability under Mechanical Load – Micro-crack Formation (Ductility)	9
Gideon P.A.G. van Zijl	
2.1 Introductory Remarks	9
2.2 Ductility as Compared with the Sum of Possibly Imposed Strains .	10
2.3 Average and Maximal Opening of Micro-cracks during Strain-hardening	11
2.3.1 Crack Width Evolution with Tensile Strain	13
2.3.2 Fibre Volume	13
2.3.3 Fibre Bond Strength	14
2.3.4 Influence of Matrix Composition	15
2.3.5 Age at Loading, Curing	17
2.3.6 Crack Formation in Shear	19
2.4 Width of Micro-cracks in Loaded and Unloaded Specimens	21
2.5 Influence of Crack Width of Micro-cracks on Permeability and Capillary Suction	22
2.5.1 Water Permeability	23
2.5.2 Gas Permeability	24

2.5.3	Chloride Permeability	24
2.6	Sustained and Cyclic Load	28
2.7	Fatigue	29
2.8	Abrasion	33
2.9	Self-healing of Micro-cracks	36
	References	36
3	Durability under Chemical Loads	41
	Byung H. Oh and Petr Kabele	
3.1	Introduction	41
3.2	Chloride Environments	42
3.2.1	Chloride Penetration: Corrosion Protection of Reinforcement in Concrete	42
3.2.2	Effects on Micromechanical Properties	44
3.2.3	Self-healing and Effects on Performance in Uniaxial Tension	46
3.3	Hydrolysis and Leaching	47
3.3.1	Effects on the Fibre-matrix Interfacial Transition Zone ..	47
3.3.2	Effects on Micromechanical Properties	49
3.4	Hot and Humid Environments	50
3.5	Alkali Environments	51
3.6	Resistance with Respect to Sulphate Attack	53
3.7	Alkali-aggregate Reaction	54
3.8	Conclusions	56
	References	57
4	Durability under Thermal Loads	59
	Romildo D. Toledo Filho, Eduardo M.R. Fairbairn, and Volker Slowik	
4.1	Introduction	59
4.2	Behaviour at Elevated Temperatures	60
4.3	Thermal Cracking at Early Age	62
4.4	Frost Resistance and Action of De-icing Salts	64
4.4.1	SHCC Freeze-thaw and De-icing Resistance as Tested According to ASTM	64
4.4.2	SHCC Freeze-thaw and De-icing Resistance as Tested with the RILEM TC-117 Procedure	66
4.5	Concluding Remarks	69
	References	70
5	Durability under Combined Loads	73
	Folker H. Wittmann	
5.1	Introduction	73
5.2	Imposed Strain and Penetration of Aggressive Compounds	75
5.3	Frost Action and Permeability	77
5.4	Hydrolysis and Ultimate Strain Capacity	77
5.5	Mechanical Load and Alkaline Environment	77

5.6	Conclusions	78
	References	78
6	Durability of Fibres	81
	Atsuhisa Ogawa and Hideki Hoshiro	
6.1	Introduction	81
6.2	Typical Properties of Fibres	82
6.3	Durability of PVA Fibre	82
6.3.1	Accelerated Test in Alkaline Environment	82
6.3.2	Accelerated Tests in Chemical Exposure	84
6.4	Durability of PVA Fibre-reinforced Cement-based Composites ...	85
6.5	Conclusions	88
	References	88
7	Durability of Structural Elements and Structures	89
	Viktor Mechtcherine and Frank Altmann	
7.1	General Remarks	89
7.2	Characteristic Mechanical, Environmental, and Combined Loads .	90
7.3	Basics for the Durability Design	93
7.3.1	General Remarks	93
7.3.2	Protection of Steel Reinforcement from Corrosion	93
7.3.3	Durability of the SHCC Matrix	95
7.3.4	Fibre Durability	95
7.3.5	Fibre-matrix Bond Durability	96
7.4	Characteristic Material Properties to Predict Long-term Durability and Service Life	96
7.4.1	General Remarks	96
7.4.2	Transport Properties	97
7.4.3	Strain Capacity of SHCC	98
7.4.4	Resistance of SHCC in Aggressive Environments	100
7.4.5	Size Effect	100
7.5	Examples	102
7.5.1	General Remarks	102
7.5.2	Patch Repair of Bridge Deck; Michigan, USA	102
7.5.3	Surface Repair of Retaining Wall; Japan	104
7.6	Summary and Conclusions	107
	References	108
8	Durability, Economical, Ecological, and Social Aspects: Life-cycle Considerations	113
	Michael D. Lepech	
8.1	Introduction	113
8.2	Life-cycle Impacts and Costs versus Initial Costs and Impacts of Construction	115
8.3	Raw Material Recycling	117
8.4	Sustainability	121

8.5 Conclusions and Future Research 128
