

Contents

1 Introduction.....	1
1.1 Objectives and Scope.....	1
1.2 Background.....	6
1.3 Notation	7
2 Mathematical Foundations	11
2.1 Geometric Description of a Deformable Body	12
2.1.1 Terminology	12
2.1.2 Manifolds, Coordinates, and Metrics.....	15
2.2 Linear Connections.....	22
2.2.1 The Covariant Derivative and Connection Coefficients.....	22
2.2.2 Torsion and Curvature	25
2.2.3 Identities for the Connection Coefficients and Curvature	26
2.2.4 The Levi-Civita Connection	28
2.3 Notation, Differential Operators, and Other Identities	31
2.4 Physical Components	35
2.4.1 General Orthogonal Coordinates	35
2.4.2 Cylindrical Coordinates.....	36
2.4.3 Spherical Coordinates.....	37
2.5 The Deformation Gradient.....	38
2.5.1 Fundamentals.....	38
2.5.2 Derived Kinematic Quantities and Identities.....	43
2.5.3 Linearization.....	47
2.6 Velocities and Time Differentiation	48
2.6.1 The Material Time Derivative	48
2.6.2 The Lie Derivative.....	51
2.6.3 Rate Kinematics.....	52
2.7 Theorems of Gauss and Stokes.....	53
2.7.1 Gauss's Theorem	53
2.7.2 Stokes's Theorem	55
2.8 Anholonomic Spaces and Compatibility	57
2.8.1 Anholonomicity	57
2.8.2 Strain Compatibility	59

2.8.3 Connection Compatibility.....	61
2.8.4 The Jacobian Determinant for Anholonomic Mappings	62
3 Kinematics of Crystalline Solids.....	65
3.1 Crystals and Lattice Deformation	67
3.1.1 Crystal Structures	67
3.1.2 The Cauchy-Born Hypothesis	75
3.1.3 Elastic Deformation and Thermal Deformation	78
3.2 Multiplicative Inelasticity.....	80
3.2.1 Background.....	80
3.2.2 The Multiplicative Decomposition	81
3.2.3 The Metric Tensor in the Intermediate Configuration.....	87
3.2.4 Kinematics, Rates, and Kinematic Approximations.....	92
3.2.5 Dislocation Plasticity	95
3.2.6 Crystal Plasticity.....	108
3.2.7 Macroscopic Plasticity.....	111
3.2.8 Inelastic Volumetric Deformation	112
3.2.9 Residual Deformation and a Multiscale Description.....	116
3.2.10 Multiplicative Atomistic Plasticity	125
3.3 A Linear Connection for Lattice Defects.....	127
3.3.1 General Form and Properties of the Connection	129
3.3.2 Dislocations and the Crystal Connection.....	136
3.3.3 Disclinations	146
3.3.4 Point Defects	160
3.3.5 Summary.....	164
4 Thermomechanics of Crystalline Solids	167
4.1 Classical Balance Laws and Definitions.....	169
4.1.1 Definitions	169
4.1.2 Mass Conservation	173
4.1.3 Momentum Conservation	174
4.1.4 Energy Conservation	178
4.2 Internal State Variables and the Dissipation Inequality.....	181
4.2.1 Constitutive and Internal Variables for Crystalline Solids	183
4.2.2 The Clausius-Duhem Inequality	188
4.3 Kinetics and Inelastic Rates.....	191
5 Thermoelasticity	197
5.1 Nonlinear Elasticity and Thermoelasticity	199
5.1.1 Constitutive Assumptions.....	199
5.1.2 Thermodynamics	203
5.1.3 Materially Nonlinear Hyperelasticity	207

5.1.4	Materially Linear Hyperelasticity	213
5.1.5	Symmetry	214
5.2	Thermostatic Relationships	221
5.2.1	Three-dimensional Stress States	221
5.2.2	Hydrostatic Stress States	226
5.3	Finite Elastic Volume Changes	235
5.4	Geometrically Linear Elasticity	238
5.4.1	Constitutive Assumptions	238
5.4.2	Thermodynamics	240
5.4.3	Materially Nonlinear Hyperelasticity	241
5.4.4	Materially Linear Hyperelasticity	245
5.4.5	Symmetry	246
5.5	Explicitly Resolved Thermal Deformation	248
5.5.1	Constitutive Assumptions	249
5.5.2	Thermodynamics	250
5.5.3	Representative Free Energy	252
5.6	Lagrangian Field Theory of Elasticity	255
5.6.1	The Variational Derivative	256
5.6.2	Hamilton's Principle in Nonlinear Elasticity	257
5.7	Elasticity of Grade Two	262
6	Elastoplasticity	273
6.1	Two-term Multiplicative Elastoplasticity	275
6.1.1	Constitutive Assumptions	277
6.1.2	Thermodynamics	280
6.1.3	Representative Free Energy	288
6.2	Dislocation Plasticity	292
6.3	Crystal Plasticity	297
6.4	Macroscopic Plasticity	305
6.5	Geometrically Linear Elastoplasticity	311
6.5.1	Constitutive Assumptions	311
6.5.2	Thermodynamics	312
6.5.3	Representative Free Energy	313
6.5.4	Linearized Dislocation Plasticity	314
6.5.5	Linearized Crystal Plasticity	315
6.5.6	Linearized Macroscopic Plasticity	316
6.6	The Eshelby Stress	317
6.7	Elastoplasticity of Grade Two	323
6.7.1	Covariant and Variational Derivatives	324
6.7.2	Constitutive Assumptions and Governing Equations	326
6.7.3	Relationship to Dislocation Theory	333

7 Residual Deformation from Lattice Defects	337
7.1 Multiplicative Kinematics	339
7.1.1 Plastic Deformation	340
7.1.2 Lattice Deformation	342
7.1.3 Multiplicative Decomposition of Total Deformation	343
7.2 Nonlinear Elastic Interpretation of Residual Elasticity	344
7.2.1 Self-equilibrium Conditions	345
7.2.2 Hyperelasticity	346
7.2.3 Average Residual Elastic Strain	347
7.2.4 Residual Elastic Volume Changes	351
7.2.5 Straight Edge and Screw Dislocations	357
7.2.6 Approximate Volume Changes	360
7.2.7 Examples: Dislocations and Disclinations in Copper	361
7.3 Atomistic Interpretation of Residual Elasticity	365
7.3.1 Atomic Stress Measures	366
7.3.2 Harmonic and Anharmonic Interactions	367
7.3.3 Residual Deformation in a Self-equilibrated Lattice	369
7.4 Point Defects and Residual Elasticity	373
7.4.1 Spherical Deformation from a Point Defect	373
7.4.2 Example: Vacancies in Copper	376
 8 Mechanical Twinning in Crystal Plasticity	 379
8.1 Mechanisms: Elasticity, Slip, and Twinning	382
8.1.1 Elasticity	382
8.1.2 Plastic Slip	384
8.1.3 Deformation Twinning	385
8.2 Crystal Plasticity with Twins and Inelastic Volume Changes	394
8.2.1 Kinematics	394
8.2.2 Constitutive Assumptions	401
8.2.3 Thermodynamics	403
8.2.4 Representative Free Energy	406
8.2.5 Kinetics	416
 9 Generalized Inelasticity	 423
9.1 Three-term Elastoplasticity: General Principles	425
9.1.1 Kinematics and Summary of Physical Mechanisms	425
9.1.2 Constitutive Assumptions	427
9.1.3 Thermodynamics	430
9.2 Porous Elastoplasticity	435
9.2.1 Void Nucleation and Growth	436
9.2.2 Continuum Damage Mechanics	443
9.2.3 Volumetric Compaction and Pore Collapse	446

9.3 Multiscale Description of Residual Elasticity	449
9.4 Inelasticity with Dislocations and Disclinations.....	451
9.4.1 Background.....	452
9.4.2 Kinematics.....	455
9.4.3 Constitutive Assumptions.....	457
9.4.4 Thermodynamics	460
9.4.5 Macroscopic and Microscopic Momentum Balances.....	461
9.4.6 Representative Free Energy.....	465
9.4.7 Kinetics and Evolution Equations	472
9.4.8 Dislocation Theory	477
10 Dielectrics and Piezoelectricity	481
10.1 Maxwell's Equations	483
10.1.1 Classical Electrodynamics	484
10.1.2 Lorentz and Galilean Invariance.....	487
10.2 Electrostatics of Dielectric Media	490
10.2.1 Maxwell's Equations of Electrostatics	490
10.2.2 Material Forms of Maxwell's Equations	495
10.2.3 Momentum Conservation	496
10.2.4 Energy Conservation	500
10.2.5 Entropy Production.....	503
10.3 Elastic Dielectric Solids.....	504
10.3.1 Constitutive Assumptions.....	504
10.3.2 Thermodynamics	508
10.3.3 Material Coefficients	511
10.3.4 Representative Free Energy	519
10.3.5 Materially Linear Electroelasticity	523
10.3.6 Symmetry	525
10.3.7 Comparison with Other Theories.....	529
10.4 Linear Elastic Dielectric Solids	534
10.4.1 Governing Equations.....	535
10.4.2 Constitutive Assumptions.....	535
10.4.3 Thermodynamics	536
10.4.4 Representative Free Energy.....	537
10.4.5 Constitutive Equations of Linear Piezoelectricity	541
Appendix A: Crystal Symmetries and Elastic Constants.....	543
A.1 Crystal Classes, Point Groups, and Laue Groups	543
A.2 Generic Material Coefficients.....	547
A.3 Elastic Constants.....	553
A.3.1 Cubic Symmetry	558
A.3.2 Transverse Isotropy	559

A.3.3 Isotropy	560
Appendix B: Lattice Statics and Dynamics	567
B.1 Dynamics	567
B.1.1 Newton's Equations	567
B.1.2 Lagrange's Equations	568
B.1.3 Hamilton's Equations	569
B.2 Statics	571
B.2.1 Governing Equations	571
B.2.2 Interatomic Potentials and Forces	572
B.2.3 Kinematics of Homogeneous Deformation	576
B.2.4 Stresses and Moduli for Homogeneous Deformations	578
B.2.5 Harmonic and Anharmonic Interactions	583
B.2.6 Examples: Pair Potential and Embedded Atom Method	587
Appendix C: Discrete Defects in Linear Elasticity	593
C.1 Volterra Defects	594
C.1.1 Edge Dislocation	598
C.1.2 Screw Dislocation	602
C.1.3 Twist Disclination	604
C.1.4 Wedge Disclination	609
C.1.5 Mixed Line Defects	612
C.1.6 Dislocation Energies in Anisotropic Crystals	613
C.2 Defect Loops	616
C.3 Point Defects	619
C.3.1 Rigid Defect in Infinite Body	621
C.3.2 Rigid Defect in Finite Body	623
C.3.3 Deformable Defect in Finite Body	625
C.4 Dislocation Nucleation and Motion	627
C.4.1 Frenkel Model	627
C.4.2 Loop Nucleation in a Perfect Crystal	628
C.4.3 Peierls Model	630
Appendix D: Kinematic Derivations	641
D.1 Total Covariant Derivative of Deformation Gradient	641
D.2 Piola's Identity for the Jacobian Determinant	642
D.3 Compatibility Conditions via Convected Coordinates	646
D.4 Anholonomic Connection Coefficients	648
Appendix E: SI Units and Fundamental Constants	653
E.1 Units	653
E.2 Fundamental Constants	654
