

Contents

1	Introduction: General Principles and Approaches in Dynamics.....	1
1.1	Principle of Mutual Reversibility	2
1.2	Action and Integral Canonical Pairs	7
1.3	Integral Characteristics in the Study of Dynamics of Natural Systems	15
1.3.1	Method of Moments: Specific Features in Integral Approach and First Moments	22
2	Recent Observations and Understanding Physical Meaning of Jacobi's Virial Equation.....	31
2.1	Dynamical Effects Discovered by Space Study	31
2.2	Interpretation of Satellite Orbits and Failure of Hydrostatic Equilibrium of the Earth and the Moon	35
2.3	Imbalance Between the Earth's Potential and Kinetic Energy	42
2.4	Generalization of Classical Virial Theorem	43
2.5	Reduction of Inner Gravitational Field of a Body to the Resultant Envelope of Pressure	50
3	Derivation of Jacobi's Virial Equation for Description of Dynamics of Natural Systems	57
3.1	Derivation of Jacobi's Virial Equation from Newtonian Equations of Motion	58
3.2	Derivation of a Generalized Jacobi's Virial Equation for Dissipative Systems	66
3.3	Derivation of Jacobi's Virial Equation from Eulerian Equations	69
3.4	Derivation of Jacobi's Virial Equation from Hamiltonian Equations	76
3.5	Derivation of Jacobi's Virial Equation in Quantum Mechanics	78
3.6	General Covariant Form of Jacobi's Virial Equation	86

3.7	Relativistic Analogue of Jacobi's Virial Equation	88
3.8	Universality of Jacobi's Virial Equation for Description of Dynamics of Natural Systems	91
4	Solution of Jacobi's Virial Equation for Conservative Systems.....	93
4.1	Solution of Jacobi's Virial Equation in Classical Mechanics	94
4.1.1	The Classical Approach.....	94
4.1.2	The Dynamic Approach.....	98
4.2	Solution of the N-Body Problem in the Framework of Conservative System.....	100
4.3	Solution of Jacobi's Virial Equation in Hydrodynamics	105
4.3.1	The Hydrodynamic Approach	105
4.3.2	The Virial Approach	109
4.4	The Hydrogen Atom as a Quantum Mechanical Analogue of the Two-Body Problem	111
4.5	Solution of a Virial Equation in the Theory of Relativity (Static Approach)	119
5	Perturbed Virial Oscillations of a System	123
5.1	Analytical Solution of a Generalized Equation of Virial Oscillations.....	125
5.2	Solution of the Virial Equation for a Dissipative System.....	132
5.3	Solution of the Virial Equation for a System with Friction	135
6	Relationship Between Jacobi Function and Potential Energy	139
6.1	Asymptotic Limit of Simultaneous Collision of Mass Points for a Conservative System	140
6.2	Asymptotic Limit of Simultaneous Collision of Mass Points for Non-conservative Systems	142
6.3	Asymptotic Limit of Simultaneous Collision of Charged Particles of a System.....	156
6.4	Relationship Between Jacobi Function and Potential Energy for a System with High Symmetry	161
6.4.1	Systems with Spherical Symmetry	162
6.4.2	Polytropic Gas Sphere Model.....	166
6.4.3	System with Elliptical Symmetry.....	171
6.4.4	System with Charged Particles	176
7	Applications in Celestial Mechanics and Geodynamics.....	183
7.1	The Problem of Eigenoscillations of a Celestial Body.....	184
7.1.1	Hydrostatic Approach.....	184
7.1.2	Dynamic Approach	189
7.2	Structure of Potential and Kinetic Energies of a Non-uniform Body	194

7.3	Equations of Dynamical Equilibrium of Oscillation and Rotation of a Body	196
7.4	Equations of Oscillation and Rotation of a Body and Their Solution	197
7.5	Application of Roche's Tidal Approach for Separation of the Body Shells	201
7.6	Physical Meaning of Archimedes and Coriolis Forces and Separation of the Earth's Shells	202
7.7	Self-similarity Principle and the Radial Component of a Non-uniform Sphere	203
7.8	Charges-Like Motion of Non-uniformities and Tangential Component of the Force Function.....	205
7.9	Radial Distribution of Mass Density and the Body's Inner Force Field	207
7.10	Oscillation Frequency and Angular Velocity of the Earth's Shell Rotation	215
7.10.1	Thickness of the Upper Earth's Rotating Shell	216
7.10.2	Oscillation of the Earth's Shells.....	217
7.10.3	Angular Velocity of Shell Rotation	218
7.11	Perturbation Effects Studied on Basis of Dynamic Equilibrium.....	219
7.11.1	The Nature of Perturbation for Orbital Motion of a Body	219
7.11.2	Change of the Outer Force Field and the Nature of Precession and Nutation.....	222
7.11.3	Observed Picture of a Body Precession.....	224
7.11.4	The Nature of Precession and Nutation	224
7.11.5	The Nature of Possible Clockwise Rotation of the Outer Core of the Earth	225
7.11.6	The Nature of the Force Field Potential Change.....	227
7.11.7	The Nature of the Earth's Orbit Plane Obliquity	227
7.11.8	The Nature of Chandler's Effect of the Earth Pole Wobbling.....	227
7.11.9	Change in Climate as an Effect of Rotation of the Earth's Shells	228
7.11.10	The Nature of Obliquity of the Earth's Equatorial Plane to the Ecliptic	228
7.11.11	Tidal Interaction of Two Bodies	229
7.12	Dynamics of the Earth's Atmosphere and Ocean.....	230
7.12.1	Derivation of the Virial Equation for the Earth's Atmosphere.....	231
7.12.2	Non-perturbed Oscillation of the Atmosphere	235
7.12.3	Perturbed Oscillations	238
7.12.4	Resonance Oscillation	242

7.12.5	Observation of the Virial Eigenoscillations of the Earth's Atmosphere.....	245
7.12.6	Dynamics of the Oceans.....	253
7.12.7	The Nature of the Weather and Climate Changes	253
7.13	Lyapunov Stability of Motion in Jacobi Dynamics	256
7.13.1	Lyapunov Stability of Motion of a System Described in Terms of Co-ordinates and Integral Characteristics.....	256
7.13.2	Stability of Virial Oscillations According to Lyapunov.....	263
7.13.3	Stability of Virial Oscillations of Celestial Bodies as Dissipative Systems	266
8	Creation and Evolution of the Solar System Bodies	267
8.1	The Third Kepler's Law as a Kinematics Basis for the Problem Solution of Creation of the Solar System Bodies.....	268
8.2	Evolution by Radiation and Gravitational Contraction of a Gaseous Sphere.....	274
8.2.1	Equilibrium Boundary Conditions for a Gravitating Gaseous Sphere	275
8.2.2	Velocity of Gravitational Contraction of a Gaseous Sphere	277
8.2.3	The Luminosity–Mass Relationship	283
8.2.4	Bifurcation of a Dissipative System	285
8.3	Cosmo–Chemical Effects	288
8.4	Direct Derivation of the Equation of Virial Oscillation from Einstein's Equation.....	291
9	The Nature of Electromagnetic Field of a Celestial Body and Mechanism of Its Energy Generation	297
9.1	Electromagnetic Component of the Interacted Masses.....	298
9.2	Potential Energy of the Coulomb Interaction of Mass Particles	300
9.3	Emission of Electromagnetic Energy by a Celestial Body as an Electric Dipole	300
9.4	Quantum Effects of Generated Electromagnetic Energy.....	305
9.5	The Nature of the Star Emitted Radiation Spectrum	307
9.6	Temperature of the Relict Radiation.....	308
10	Conclusions	311
	References.....	321
	Index	323

Jacobi Dynamics

A Unified Theory with Applications to Geophysics,
Celestial Mechanics, Astrophysics and Cosmology

Ferronsky, V.I.; Denisik, S.A.; Ferronsky, S.V.

2011, XIV, 330 p., Hardcover

ISBN: 978-94-007-0497-8
