

Contents

1	Introduction	1
1.1	Definition of Electric Power Quality	1
1.2	Sources for Electric Power Quality Deterioration in a Power System	1
1.3	Need for Assessment of Electric Power Quality	2
1.4	Book at a Glance	2
2	Electric Power Quality	5
2.1	Introduction	5
2.2	Electric Power Quality	5
2.3	Classification of Power System Disturbances	7
2.4	Power Quality Standards and Guidelines	8
	References	10
3	Unbalance	13
3.1	Introduction	13
3.2	Unbalance in Three Phase Power System	13
3.3	Sources of Unbalance	14
3.4	Effect of Unbalance	14
	References	15
4	Harmonics	17
4.1	Introduction	17
4.2	Fundamental Wave	17
4.3	Harmonics	18
4.4	Sources of Harmonics	21
4.4.1	Magnetization Nonlinearities of Transformers	22
4.4.2	Rotating Machine	23
4.4.3	Distortion Caused by Arcing Devices	24
4.4.4	Power Supplies with Semiconductor Devices	24
4.4.5	Inverter Fed AC drives	24
4.4.6	Thyristor Controlled Reactors	24

4.4.7	Phase Controller	25
4.4.8	AC Regulators	25
4.5	Effects of Harmonics	25
4.5.1	Resonance	26
4.5.2	Poor Damping	26
4.5.3	Effects of Harmonics on Rotating Machines	26
4.5.4	Effects of Harmonics on Transformers	27
4.5.5	Effects of Harmonics on Transmission System	27
4.5.6	Effects of Harmonics on Measuring Instruments	28
4.5.7	Harmonic Interference with Power System Protection	29
4.5.8	Effects of Harmonics on Capacitor Banks	29
4.5.9	Effects of Harmonics on Consumer Equipment	29
4.5.10	Summary of Effects of Harmonics	30
4.6	Harmonic Standard	31
4.6.1	The IEC Standard	31
4.6.2	IEEE 519-1992	32
4.6.3	General Harmonic Indices	33
	References	33
5	Transients	35
5.1	Introduction	35
5.2	Power System Transients	35
5.3	Causes of Power System Transients	36
5.3.1	Impulsive Transients	37
5.3.2	Oscillatory Transients	37
5.3.3	Multiple Transients with a Single Cause	37
5.4	Effects	38
	References	38
6	Sag, Swell, Interruption, Undervoltage and Overvoltage	39
6.1	Introduction	39
6.2	Sag	39
6.3	Swell	40
6.4	Interruption	40
6.5	Sustained Interruption	41
6.6	Undervoltage	41
6.7	Overvoltage	42
6.8	Discussion	42
	References	42
7	DC Offset, Electric Noise, Voltage Fluctuation, Flicker and Power Frequency Variation	43
7.1	Introduction	43
7.2	DC Offset	43
7.3	Electric Noise	44

7.4	Voltage Fluctuation	44
7.5	Flicker	45
7.6	Power Frequency Variations	45
7.7	Discussion	45
	References	46
8	Unbalance Assessment Using Sequence Components	47
8.1	Introduction	47
8.2	Sequence Component	47
8.2.1	Positive Sequence Current and Voltage Components	48
8.2.2	Negative Sequence Current and Voltage Components	49
8.2.3	Zero Sequence Current and Voltage Components	50
8.3	Phase Currents and Voltages	50
8.3.1	Balanced System	50
8.3.2	Unbalanced System	51
8.4	'a' Operator and Angle Representation in Complex Plane	52
8.5	Currents and Voltages in Terms of Sequence Components with 'a' Operator	53
8.6	Case Study on Unbalance	54
8.6.1	Single Phasing in Induction Motor	54
8.6.2	Line Currents during Single Phasing	54
8.6.3	Sequence Components in Single Phasing	55
8.6.4	Line Currents and Sequence Components	59
8.7	Definition of Unbalance: An Alternate Approach	61
	References	62
9	Unbalance Assessment Using Feature Pattern Extraction Method	63
9.1	Introduction	63
9.2	Feature Pattern Extraction Method	63
9.3	Unbalance and FPEM	64
9.4	CMS Rule Set for Unbalance Assessment by FPEM	67
9.5	Algorithm for Unbalance Assessment	73
9.6	Discussion	74
	References	74
10	Useful Tools for Harmonic Assessment	77
10.1	Introduction	77
10.2	Fourier Series	78
10.3	Fourier Transform	79
10.4	Discrete Fourier Transform	80
10.5	Fast Fourier Transform	80
10.6	Hartley Transform and Discrete Hartley Transform	81
10.7	Wavelet Transform	81
10.8	Discussion	82
	References	82

11 Harmonic Assessment using FPEM in V-V and I-I Planes	83
11.1 Introduction	83
11.2 Harmonic Assessment by FPEM	83
11.3 Patterns in V-V Planes in Presence of Harmonic	84
11.4 CMS Rule for Determination of Highest order of Dominating Harmonics	86
11.5 Limitation of FPEM for Harmonic Assessment in V-V and I-I Plane	87
11.6 Algorithm for Real Power System Data	87
11.7 Discussions	88
References	88
12 Clarke and Park Transform	89
12.1 Introduction	89
12.2 Current Space Vector	89
12.3 Stationary Reference Frame	90
12.4 General Rotating Reference Frame	92
12.5 d-q Rotating Reference Frame	93
12.6 Transformation Matrices	94
12.7 Discussion	96
References	96
13 Harmonics Assessment by FPEM in Clarke and Park Planes	97
13.1 Introduction	97
13.2 Harmonic Analysis in Clarke Plane	98
13.3 Harmonic Analysis in Park Plane	103
13.4 Discussion	106
References	106
14 Harmonic Assessment by Area Based Technique in V-V and I-I Planes	107
14.1 Introduction	107
14.2 Area Based Technique (ABT)	107
14.2.1 Area and Powers	107
14.2.2 Fundamental Frequency and Reference Signal for Assessment of Fundamental Component	109
14.2.3 Reference Signal for Assessment of Harmonic Components	110
14.2.4 Contribution of Fundamental Component	111
14.2.5 Contribution of Harmonic Components	112
14.2.6 CMS Equations for Total Harmonic Distortion Factors	113
14.3 Algorithm	113
14.4 Discussion	113
References	114

15 Harmonic Assessment by Area Based Technique in Clarke and Park Planes	115
15.1 Introduction	115
15.2 Voltage and Current in Clarke ($\alpha-\beta$) Plane	116
15.3 Reference Signal for Assessment of Fundamental Component	117
15.4 Fundamental Components in Clarke Plane	117
15.5 Harmonic Components in Clarke Plane	119
15.6 CMS Equations for Total Harmonic Distortion in Clarke Plane	121
15.7 Voltages and Currents in Park (d-q) Plane	122
15.8 Reference Signal in Park Plane	123
15.9 Fundamental Components in Park Plane	124
15.10 Harmonic Components in Park Plane	126
15.11 CMS Equations for Total Harmonic Distortion Factors	128
15.12 Discussion	129
References	129
16 Assessment of Power Components by FPEM and ABT	131
16.1 Introduction	131
16.2 Power Components by FPEM	131
16.3 CMS Rule Set for Power Components by FPEM	136
16.4 Limitations of CMS Rule Set for Power Components by FPEM	137
16.5 Power Component Assessment by Area Based Technique	137
16.6 Power Components of R, Y and B Phases	138
16.6.1 Contribution of Fundamental Components	138
16.6.2 Contribution of Harmonic Components	139
16.7 Power Components in Clarke Plane	140
16.7.1 Contribution of Fundamental Components	140
16.7.2 Contribution of Harmonic Components	142
16.8 Power Components in Park Plane	145
16.8.1 Contribution of Fundamental Components	145
16.8.2 Contribution of Harmonic Components in Park Plane	147
16.9 CMS Equations for Power Distortion Factors	149
16.9.1 Active Power Distortion Factor in Phase R	149
16.9.2 Reactive Power Distortion Factor in Phase R	149
16.9.3 Apparent Power Distortion Factor in Phase R	149
16.9.4 Active Power Distortion Factor in Clarke Plane	150
16.9.5 Reactive Power Distortion Factor in Clarke Plane	150
16.9.6 Active Power Distortion Factor in Park Plane	150
16.9.7 Reactive Power Distortion Factor in Park Plane	150
16.10 Discussion	151
References	151

17 Transients Analysis	153
17.1 Introduction	153
17.2 Sub-band Filters	153
17.3 Model Based Approaches	154
17.4 ESPRIT Method	155
17.5 Suitability of ESPRIT	155
17.6 Discussion	156
References	156
18 Passivity and Activity Based Models of Polyphase System	159
18.1 Introduction	159
18.2 Passivity Based Model	159
18.2.1 Mathematical Model	159
18.2.2 Equivalent Circuit of Passive Model of a Polyphase System	161
18.2.3 Layer Based Representation of Passive Impedances	162
18.2.4 Limitation of Passive Model	163
18.3 CMS Activity Based Model	163
18.3.1 Mathematical Model	163
18.3.2 Equivalent Circuit of Active Model	164
18.3.3 Layer Based Representation of Active Model	165
18.4 Mutual Interaction of Voltage and Current of Different Frequencies in Park Plane	167
18.5 Active Model of a System having Harmonics up to Third Order: A Case Study	167
18.6 Nature of Active Impedance	169
18.7 Case Study of Active Model on Poly-phase Induction Machine	170
18.8 Discussion	175
