Preface	xi
Advances in the Particle Finite Element Method (PFEM) for Solving Coupled Problems in Engineering	1
E. Oñate, S.R. Idelsohn, M.A. Celigueta, R. Rossi J. Marti, J.M. Carbonell, P. Ryzhakov and B. Suárez	
1 Introduction	2
2 The Basis of the Particle Finite Element Method	3
2.1 Basic Steps of the PFEM	4
3 FIC/FEM Formulation for a Lagrangian Incompressible Thermal Fluid	7
3.1 Governing Equations	7
3.2 Discretization of the Equations	9
4 Overview of the Coupled FSI Algorithm	10
5 Generation of a New Mesh	13
6 Identification of Boundary Surfaces	15
7 Treatment of Contact Conditions in the PFEM	17
7.1 Contact between the Fluid and a Fixed Boundary	17
7.2 Contact between Solid-Solid Interfaces	18
8 Modeling of Bed Erosion	18
9 Modelling and Simulation of Excavation and Wear of Rock Cutting Tools	23
10 Examples	25
10.1 Rigid Objects Falling into Water	25
10.2 Impact of Water Streams on Rigid Structures	27
10.3 Dragging of Objects by Water Streams	27
10.4 Impact of Sea Waves on Piers and Breakwaters	28
10.5 Soil Erosion	29
10.6 Melting, Spread and Burning of Polymer Objects in Fire ..	34
10.7 Simulation of Excavation Process and Wear of Rock Cutting Tools	40

11	Conclusions	43
	References	47
Advances in Computational Modelling of Multi-Physics in Particle-Fluid Systems		
	Y.T. Feng, K. Han and D.R.J. Owen	51
1	Introduction	51
2	Particle-Particle Interactions – Discrete Element Approach	53
2.1	Representation of Discrete Objects	54
2.2	Contact Detection	54
2.3	Contact Resolution	55
2.4	Governing Equations and Time Stepping	56
3	Fluid-Particle Interactions	57
3.1	The Lattice Boltzmann Method	57
3.2	Incorporating Turbulence Model in the Lattice Boltzmann Equation	59
3.3	Hydrodynamic Forces for Fluid-Particle Interactions	60
3.4	Fluid and Particle Coupling	61
4	Thermal-Particle Interactions	63
4.1	Convective Heat Transfer	63
4.2	Conductive Heat Transfer in Particles	64
5	Fluid-Magnetic-Particle Interactions	69
5.1	Magnetic Forces	69
5.2	Fluid, Magnetic and Particle Coupling	73
6	Numerical Illustration	73
6.1	Example 1: Simulation of Particle Transport in a Vacuum Dredging System	73
6.2	Example 2: Simulation of Heat Transfer in a Packed Bed	77
6.3	Example 3: Simulation of a Magnetorheological Fluid ...	77
7	Concluding Remarks	86
	References	87
Large Scale Simulation of Industrial, Engineering and Geophysical Flows Using Particle Methods		
	Paul W. Cleary, Mahesh Prakash, Matt D. Sinnott, Murray Rudman and Raj Das	89
1	Introduction	89
2	Industrial Flows	90
2.1	Mixing	90
2.2	Separation	93
2.3	Comminution	94
2.4	Material Forming	96
2.5	Bubbly and Reacting Multiphase Flows	98
3	Fluid-Structure and Engineering Flows	100
3.1	Rogue Wave Impact on an Moored Oil Platform	100
3.2	Ship Slamming and Green Water–Ship Interaction	101

3.3	Spillway Flow and Dam Discharge	101
3.4	Dam Wall Collapse under Earthquake Loading	102
3.5	Fracture of a Structural Column during Projectile Impact	104
3.6	Excavation	104
4	Geo-Hazard and Extreme Geophysical Flows	105
4.1	Landslide	107
4.2	Flooding from Dam Wall Collapse	107
4.3	Tsunami	108
5	Conclusions	108
	References	110
 Parallel Computation Particle Methods for Multi-Phase Fluid Flow with		
Application Oil Reservoir Characterization 113		
John R. Williams, David Holmes and Peter Tilke		
1	Introduction	113
1.1	Oil Reservoir Characterization	113
1.2	Multi-Core Parallel Computing	114
2	Computational Physics Using Particle Methods	116
2.1	Overview	116
2.2	SPH for Fluid Flow	117
2.3	Testing and Verification	120
2.4	Characterization of Flow	121
3	Application of SPH to Pore Scale Physics	122
4	Parallel Computation on Multi-Core	124
4.1	Parallel Algorithms and the Ghost Region Issue	124
4.2	Spatial Hashing in Particle Methods	129
5	Conclusions	130
	References	130
 The Particle Finite Element Method for Multi-Fluid Flows 135		
S.R. Idelsohn, M. Mier-Torrecilla, J. Marti and E. Oñate		
1	Introduction	135
2	Particle Finite Element Method	136
3	Multi-Fluid Flows	139
3.1	Governing Equations	140
3.2	Discontinuities at the Interface	141
3.3	Interface Description	143
3.4	PFEM for Multi-Fluid Flows	144
3.5	Combustion Problem	147
4	Numerical Examples	149
4.1	Bubble Breakup	150
4.2	Negatively Buoyant Jet	152
4.3	Candle Combustion	153
5	Summary and Conclusions	155
	References	157

On Material Modeling by Polygonal Discrete Elements	159
B. Schneider, G.A. D'Addetta and E. Ramm	
1	Introduction 159
2	Basic Discrete Element Method 160
3	Models for Contact 161
3.1	Normal Direction 162
3.2	Tangential Direction 162
3.3	Contact with Background Plate 163
4	Models for Cohesion 163
4.1	Brittle Beam 163
4.2	Beam with Damage 164
4.3	Softening Interface 166
5	Homogenization 168
5.1	Motivation 168
5.2	Representative Volume Element (RVE) 169
5.3	Averaging Procedure 170
5.4	Extension to Higher Order Continua 172
5.5	Size of RVE 174
6	Examples 175
6.1	Samples without Cohesion 175
6.2	Samples with Cohesion 178
7	Conclusions 183
	References 184
Discrete Numerical Analysis of Failure Modes in Granular Materials	187
Luc Sibille, Florent Prunier, François Nicot and Félix Darve	
1	Introduction 188
2	Theoretical Background 189
2.1	Kinetic Energy and Second-Order Work 189
2.2	DEM Investigation for Proportional Strain Loading Paths 192
3	Cones of Unstable Loading Directions, Bifurcation Domain 194
3.1	Basic Concepts 194
3.2	Illustration 196
3.3	Case of the Proportional Strain Loading Path 201
4	From Limit States to Failure Occurrence 202
4.1	Mixed Loading Parameters 203
4.2	Stable and Unstable Loading Directions 206
5	Conclusion 208
	References 209

C. Wellmann and P. Wriggers	
1	Introduction 211
2	Discrete Element Method 212
3	Parallelization 213
4	Periodic Triaxial Tests 217

4.1	Periodic RVEs	217
4.2	Boundary Conditions	218
4.3	Random Sample Generation	220
5	Results	221
5.1	Packing Density	223
5.2	RVE Size	224
5.3	Particle Shape	225
6	Conclusion	229
	References	230
Some Consideration on Derivative Approximation of Particle Methods . .		233
Hitoshi Matsubara, Shigeo Iraha, Genki Yagawa and Doosam Song		
1	Introduction	233
2	Formulation and Some Remarks on Particle Methods	234
3	Numerical Examples	238
3.1	Energy Norm in Elasticity Field	238
3.2	Strain Distributions in Complicated Displacement Field	241
4	Conclusion	243
	References	244
Discrete Element Modelling of Rock Cutting		247
Jerzy Rojek, Eugenio Oñate, Carlos Labra and Hubert Kargl		
1	Introduction	247
2	Numerical Model of Rock Cutting	249
3	Discrete Element Method Formulation	250
4	Determination of Rock Model Parameters	254
4.1	Dimensionless Micro-Macro Relationships	254
5	Simulation of Rock Cutting	260
5.1	Simulation of Rock Cutting with a Single Roadheader Pick	261
5.2	Simulation of the Linear Cutting Test	264
6	Concluding Remarks	266
	References	267
