

Contents

1	Introduction	1
	Chittaranjan Ray and Ravi Jain	
1.1	Nature and Extent of the Problem.....	1
1.2	Water Contaminants	3
1.3	Topics Covered.....	8
2	Drinking Water Treatment Technology—Comparative Analysis	9
	Chittaranjan Ray and Ravi Jain	
2.1	Introduction	10
2.2	Natural Filtration	10
2.3	Riverbank Filtration	11
2.4	Slow Sand Filtration.....	15
2.5	Membrane Filtration.....	17
	2.5.1 Pressurized Systems	18
	2.5.2 Gravity-Fed Systems.....	20
2.6	Solar Distillation	21
2.7	Solar Pasteurization.....	23
	2.7.1 Flat Panel Collectors	24
	2.7.2 Compound Parabolic Collectors	25
	2.7.3 UV Irradiation	26
2.8	Technology Development Challenges.....	28
2.9	Technological Implementation—Case Studies	29
	2.9.1 Natural Filtration.....	29
	2.9.2 Membrane Filtration in Singapore	32
	2.9.3 Solar Distillation—Mexico/United States Border	33
	2.9.4 Solar Pasteurization—Nyanza Province, Kenya.....	35
3	Solar Pasteurization	37
	Ed Pejack	
3.1	Microbiology of Water Pasteurization	37
3.2	Use of Solar Cookers for Drinking Water Production	39
3.3	Devices Designed Specifically for Water.....	41

3.4	Simple Devices from Common Materials.....	44
3.5	Commercial Devices in Production	46
3.6	Devices with Recovery Heat Exchange	47
3.7	Water Pasteurization Indicators.....	50
3.8	Multi-use Systems.....	53
3.9	Summary	53
4	Membrane Desalination	55
	Kishore Rajagopalan	
4.1	Desalination Technologies	56
4.2	Thermal Desalination Technologies.....	56
	4.2.1 Multistage Flash Distillation.....	56
	4.2.2 Multiple-Effect Distillation.....	57
4.3	Membrane Processes.....	58
	4.3.1 Reverse Osmosis	58
	4.3.2 Electrodialysis	60
4.4	Emerging Membrane Technologies.....	62
	4.4.1 Membrane Distillation	62
	4.4.2 Forward Osmosis	63
4.5	Global Growth of Membrane Desalination.....	64
4.6	Desalination Environment Interactions.....	64
	4.6.1 Intake Structures.....	65
	4.6.2 Brine Discharge.....	65
	4.6.3 Brine Discharge from Brackish Water Plants.....	67
	4.6.4 Energy Use in Desalination.....	67
4.7	Mitigation of Environmental Impacts	67
	4.7.1 Reducing the Impact of Seawater Intake Structures	67
	4.7.2 Reducing the Impact of Brine Discharge	70
	4.7.3 Reducing Carbon Footprint of Desalination	71
4.8	Membrane-Based Desalination at the Small and Medium Scale.....	77
	4.8.1 Energy Sources and Their Suitability for Desalination.....	78
	4.8.2 Membrane Material Choices	83
	4.8.3 Membrane Modules	86
4.9	Integrated Approaches.....	88
4.10	Conclusions.....	91
5	Bank Filtration as Natural Filtration.....	93
	Chittaranjan Ray, Jay Jasperse and Thomas Grischek	
5.1	Introduction.....	94
5.2	Natural Filtration's Implications for Sustainability.....	97
	5.2.1 Energy Consumption, Resource Requirements and Waste Generation.....	97
	5.2.2 Other Environmental Advantages	98
	5.2.3 Flexibility and Adaptability of System Operation	98
5.3	How Does It Work?.....	100

5.4	Regulatory Perspective.....	102
5.4.1	United States	102
5.4.2	Europe	103
5.5	Key Planning Considerations	103
5.5.1	Define Project Objectives	104
5.5.2	Phased Planning Process	104
5.5.3	River Hydrology.....	104
5.5.4	Fluvial and Geomorphic Processes	105
5.5.5	Watershed Conditions	106
5.5.6	Surface and Groundwater Quality.....	107
5.5.7	Water Temperature	107
5.5.8	Geology and Hydrogeology	108
5.5.9	Composition of the Riverbed Hyporheic Zone	109
5.5.10	Surface Water—Groundwater Interactions	110
5.5.11	Natural Hazards.....	111
5.6	Site Characterization	113
5.6.1	Riverbed Survey.....	113
5.6.2	Shallow Sediment Sampling	114
5.6.3	Seepage Meters	114
5.6.4	Analysis of Vertical Gradients.....	115
5.6.5	Measurement of Water Temperature	116
5.6.6	Seepage Runs	118
5.6.7	Aquifer Testing.....	118
5.6.8	Geophysical Methods.....	119
5.7	Design Considerations	120
5.7.1	Centralized or Decentralized Pumping?.....	120
5.7.2	Siphon Systems	121
5.7.3	Pump Selection.....	123
5.7.4	Enhanced Recharge Techniques.....	124
5.7.5	Lakes Application.....	126
5.8	Operational Considerations.....	127
5.8.1	Operational Criteria.....	127
5.8.2	Operational Parameters	129
5.8.3	Monitoring Parameters.....	131
5.8.4	Analysis of Operational and Monitoring Parameters	133
5.8.5	Maintenance	137
5.9	How Well Does It Work?	140
5.10	Performance Assessment of RBF Systems	146
5.11	Areas of Future Study and Technology Development.....	149
5.11.1	Mechanisms of Natural Filtration	149
5.11.2	Surface Water and Groundwater Interactions.....	151
5.11.3	Evolving Facility Design Considerations.....	151
5.11.4	Interaction of Aquifer and Intake Lateral Hydraulics	153
5.11.5	Sustainable Pumping Systems (Siphon and Gravity System).....	154
5.12	Implementation, Challenges, Strategies.....	155

6	Solar Distillation	159
	Rahul Dev and Gopal Nath Tiwari	
6.1	Introduction.....	160
6.2	Water Characterization.....	160
6.3	Solar Distillation: Basic Principle.....	161
6.4	Historical Background: Evaluation Process of Solar Stills.....	163
6.5	Broad Classification of Solar Stills.....	165
6.5.1	Passive Solar Stills.....	166
6.5.2	Active Solar Still.....	180
6.6	Various Methods of Fixing the Glass Cover onto the Solar Still Walls.....	184
6.7	Heat Transfer and Thermal Modeling.....	184
6.7.1	Elements of Heat Transfer.....	187
6.7.2	Overall Heat Transfer.....	190
6.7.3	Instantaneous Thermal Efficiency (η_i).....	191
6.7.4	Overall Thermal Efficiency (η_o).....	191
6.8	Thermal Analysis: Development of Energy Balance Equations.....	191
6.8.1	Conventional Single Slope Solar Still.....	192
6.8.2	Thermal Modeling of Double Slope Solar Still.....	193
6.8.3	Active Single Slope Solar Still.....	195
6.9	Comparison of Distillate Yield for Different Active Solar Stills....	196
6.10	Effect of Various Parameters.....	196
6.10.1	Climatic Parameters.....	197
6.10.2	Operational Factors.....	200
6.11	Cost, Energy and Exergy Issues Related to Water Production Through Solar Stills.....	203
6.11.1	Payback Period (n_p).....	204
6.12	CO ₂ Emission, CO ₂ Mitigation, and Carbon Credit Earned.....	205
6.12.1	CO ₂ Emission.....	206
6.12.2	CO ₂ Mitigation: Reducing CO ₂ Emission in Environment in the Form of Embodied Energy.....	206
6.12.3	Carbon Credit Earned.....	206
6.13	Technology Transfer.....	207
6.14	Challenges in Adoption.....	209
7	Transdisciplinary Analysis	211
	Ravi Jain	
7.1	Sustainability Concepts and Differing Views.....	211
7.2	Industrial Practices: Suggested Options.....	214
7.3	Sustainability of Technology in Developing Countries.....	216
7.3.1	Complexity of Physical Infrastructure.....	216
7.3.2	Effective Knowledge Transfer.....	218
7.3.3	Adequate Financial Resources.....	219
7.4	Sustainability Framework.....	219

7.4.1	Metrics for Sustainability.....	220
7.4.2	Specific Indicators for Sustainability.....	220
7.4.3	A Framework for Preference Index.....	221
7.5	Technology Transfer and Implementation.....	222
7.5.1	Characteristics of Innovation and Diffusion.....	223
7.5.2	Implementation Benefits.....	225
7.5.3	Impediments and Challenges.....	227
7.5.4	Ways to Overcome Impediments.....	228

Drinking Water Treatment

Focusing on Appropriate Technology and Sustainability

Ray, C.; Jain, R. (Eds.)

2011, XVI, 264 p., Hardcover

ISBN: 978-94-007-1103-7
