1	Introduction	1
2	Basics of Sigma-Delta Modulation	5
2.1	AD, DD, and DA Sigma-Delta Conversion	8
2.1.1	AD Conversion	8
2.1.2	DD Conversion	9
2.1.3	DA Conversion	9
2.2	Sigma-Delta Structures	10
2.3	Linear Modeling of an SDM	12
2.4	Sigma-Delta Modulator Performance Indicators	17
2.4.1	Generic Converter Performance	17
2.4.2	SDM Specific Functional Performance	22
2.4.3	SDM Specific Implementation Costs	26
2.4.4	Figure-of-Merit of an SDM	27
3	Transient SDM Performance	29
3.1	Measuring Signal Conversion Quality	29
3.1.1	Steady-State	29
3.1.2	Non-steady-State	30
3.2	Time Domain SINAD Measurement	31
3.3	Steady-State SINAD Measurement Analysis	33
3.3.1	Obtaining the Linearized STF	34
3.3.2	Time Domain SINAD Measurement	37
3.4	Non-steady-State SINAD Measurement Analysis	37
3.5	Conclusions	40
4	Noise-Shaping Quantizer Model	43
4.1	Generic Quantizer	43
4.2	Noise-Shaping Quantizer	44
4.3	Noise-Shaping Quantizer with Multiple Cost Functions	46
4.4	Specific Realization Structures	47

5	Look-Ahead Sigma-Delta Modulation	49
5.1	Noise-Shaping Quantizer with Look-Ahead	49
5.2	Look-Ahead Enabled SDM Model	51
5.3	Look-Ahead Principle	52
5.3.1	Quantizer Cost Function	54
5.4	Obtaining Information About the Future	55
5.4.1	Approximated Future Input	55
5.4.2	Actual Future Input	56
5.5	Full Look-Ahead Algorithm	56
5.6	Linear Modeling of a Look-Ahead SDM	59
5.6.1	Boundary Conditions and Assumptions	59
5.6.2	Feed-Forward Look-Ahead SDM	60
5.6.3	Feed-Back Look-Ahead SDM	62
5.7	Benefits and Disadvantages of Look-Ahead	64
5.7.1	Benefits	65
5.7.2	Disadvantages	67
5.8	Look-Ahead AD Conversion	68
5.8.1	Potential Benefits and Disadvantages of Look-Ahead in AD Conversion	68
5.8.2	Feasibility of a Look-Ahead ADC	69
5.8.3	Hybrid Look-Ahead ADC	71
5.8.4	Conclusion	72
5.9	Look-Ahead DD Conversion	72
5.10	Conclusions	75
6	Reducing the Computational Complexity of Look-Ahead DD Conversion	77
6.1	Full Look-Ahead	77
6.1.1	Complete Response Calculation with Reuse of Intermediate Results	78
6.1.2	Select and Continue with Half of the Solutions	78
6.1.3	Linear Decomposition of the Filter Response	79
6.1.4	Conditional Computation of the Solutions	80
6.1.5	Calculating Multiple Output Symbols per Step	80
6.1.6	Summary	82
6.2	Pruned Look-Ahead	82
6.2.1	Motivation for Pruning	83
6.2.2	Basic Pruned Look-Ahead Modulation	84
6.2.3	Pruned Look-Ahead Modulation with Reuse of Results	86
6.2.4	Summary	95
6.3	Pruned Look-Ahead Modulator Realizations	95
6.3.1	Trellis Sigma-Delta Modulation	96
6.3.2	Efficient Trellis Sigma-Delta Modulation	97
6.3.3	Pruned Tree Sigma-Delta Modulation	98
6.3.4	Pruned Tree Sigma-Delta Modulation for SA-CD	100
6.4	Conclusions	101

7	Trellis Sigma-Delta Modulation	103
7.1	Algorithm — Kato Model	104
7.1.1	Hidden Markov Model	104
7.1.2	Algorithm Steps	106
7.2	Algorithm — Pruned Look-Ahead Model	109
7.3	Verification of the Linearized NTF and STF	110
7.3.1	NTF	110
7.3.2	STF	112
7.4	Relation Trellis Order and Trellis Depth	113
7.4.1	Simulation Setup	114
7.4.2	Trellis Depth as a Function of the Trellis Order and the Signal Amplitude	114
7.4.3	Trellis Depth as a Function of the Signal Frequency	116
7.4.4	Trellis Depth as a Function of the Loop-Filter Configuration	117
7.4.5	Summary	118
7.5	Functional Performance	119
7.5.1	SNR, SINAD, THD and SFDR	119
7.5.2	Converter Stability	124
7.5.3	Noise Modulation	128
7.5.4	Summary	130
7.6	Implementation Aspects	131
7.6.1	Required Computational Resources	131
7.6.2	Look-Ahead Filter Unit	132
7.6.3	Output Symbol Selection	134
7.7	Conclusions	135
8	Efficient Trellis Sigma-Delta Modulation	137
8.1	Reducing the Number of Parallel Paths	137
8.2	Algorithm	140
8.3	Relation Between N and M	141
8.4	Required History Length	143
8.5	Functional Performance	145
8.5.1	SNR, SINAD, THD and SFDR	145
8.5.2	Converter Stability	149
8.5.3	Noise Modulation	150
8.5.4	Summary	152
8.6	Implementation Aspects	153
8.6.1	Selection Step	154
8.7	Conclusions	156
9	Pruned Tree Sigma-Delta Modulation	159
9.1	Removing the Test for Uniqueness	159
9.2	Algorithm	161
9.2.1	Initialization Phase	162
9.2.2	Operation Phase	162
9.3	Required History Length	163

9.4	Functional Performance	165
9.4.1	SNR, SINAD, THD and SFDR	165
9.4.2	Converter Stability	168
9.4.3	Noise Modulation	170
9.4.4	Summary	172
9.5	Implementation Aspects	174
9.6	Conclusions	175
10	Pruned Tree Sigma-Delta Modulation for SA-CD	179
10.1	Requirements of an SA-CD Modulator	179
10.2	SA-CD Lossless Data Compression	181
10.3	Dual Optimization	184
10.3.1	Predictor Cost Function	185
10.3.2	Combining the Cost Functions	187
10.3.3	Spectral Shaping	188
10.4	Algorithm	190
10.5	Functional Performance	193
10.5.1	Lossless Data Compression	193
10.5.2	SNR, SINAD, THD and SFDR	194
10.5.3	Converter Stability	196
10.5.4	Noise Modulation	197
10.5.5	Summary	200
10.6	Implementation Aspects	201
10.7	Conclusions	202
11	Comparison of Look-Ahead SDM Techniques	205
11.1	Alternative Look-Ahead Techniques	205
11.2	Algorithm Comparison	206
11.3	Functional Performance Comparison	209
11.3.1	SNR, SINAD, THD and SFDR	209
11.3.2	Converter Stability	213
11.3.3	Noise Modulation	216
11.3.4	Lossless Data Compression	218
11.3.5	Summary	220
11.4	Conclusions	221
12	Maximum SNR Analysis	225
12.1	Experiment 1	225
12.2	Experiment 2	227
12.3	Analysis	228
12.3.1	Second Order Filter Stability	229
12.3.2	High Order Filter Stability	231
12.4	Obtaining the Maximum SNR	233
12.5	Theoretical Maximum SNR	235
12.6	Conclusions	237
13	General Conclusions	239

Appendix A FFT Calculations — Coherent and Power Averaging 241

Appendix B Description of the Used Sigma-Delta Modulators 243
