Part I Introduction

1 Introduction	3
1 Basic Review	3
2 Motivations and Aims	8

Part II Theory

2 Special Orthogonal Group $SO(N)$	13
1 Introduction	13
2 Abstract Groups	15
3 Orthogonal Group $SO(N)$	16
4 Tensor Representations of the Orthogonal Group $SO(N)$	16
4.1 Tensors of the Orthogonal Group $SO(N)$	16
4.2 Irreducible Basis Tensors of the $SO(2l + 1)$	19
4.3 Irreducible Basis Tensors of the $SO(2l)$	21
4.4 Dimensions of Irreducible Tensor Representations	24
4.5 Adjoint Representation of the $SO(N)$	25
4.6 Tensor Representations of the Groups $O(N)$	26
5 Γ Matrix Groups	27
5.1 Fundamental Property of Γ Matrix Groups	27
5.2 Case $N = 2l$	28
5.3 Case $N = 2l + 1$	30
6 Spinor Representations of the $SO(N)$	30
6.1 Covering Groups of the $SO(N)$	30
6.2 Fundamental Spinors of the $SO(N)$	33
6.3 Direct Products of Spinor Representations	34
6.4 Spinor Representations of Higher Ranks	35
6.5 Dimensions of the Spinor Representations	37
7 Concluding Remarks	38

3	Rotational Symmetry and Schrödinger Equation in D-Dimensional Space	39
1	Introduction	39
2	Rotation Operator	39
3	Orbital Angular Momentum Operators	41
4	The Linear Momentum Operators	45
5	Radial Momentum Operator	46
6	Spherical Harmonic Polynomials	48
7	Schrödinger Equation for a Two-Body System	49
8	Concluding Remarks	50
4	Dirac Equation in Higher Dimensions	51
1	Introduction	51
2	Dirac Equation in $(D + 1)$ Dimensions	51
3	The Radial Equations	52
3.1	The $SO(2N + 1)$ Case	53
3.2	The $SO(2N)$ Case	55
4	Application to Hydrogen Atom	57
5	Concluding Remarks	59
5	Klein-Gordon Equation in Higher Dimensions	61
1	Introduction	61
2	The Radial Equations	61
3	Application to Hydrogen-like Atom	62
4	Concluding Remarks	64

Part III Applications in Non-relativistic Quantum Mechanics

6	Harmonic Oscillator	67
1	Introduction	67
2	Exact Solutions of Harmonic Oscillator	68
3	Recurrence Relations for the Radial Function	69
4	Realization of Dynamic Group $SU(1, 1)$	72
5	Generalization to Pseudoharmonic Oscillator	73
5.1	Introduction	73
5.2	Exact Solutions	74
5.3	Ladder Operators	75
5.4	Recurrence Relation	78
6	Position and Momentum Information Entropy	78
7	Conclusions	79
7	Coulomb Potential	81
1	Introduction	81
2	Exact Solutions	82
3	Shift Operators	84
4	Mapping Between the Coulomb and Harmonic Oscillator Radial Functions	87

5	Realization of Dynamic Group $SU(1, 1)$	88
6	Generalization to Kratzer Potential	90
7	Concluding Remarks	96
8	Wavefunction Ansatz Method	97
1	Introduction	97
2	Sextic Potential	97
3	Singular One Fraction Power Potential	100
4	Mixture Potential	101
5	Non-polynomial Potential	103
6	Screened Coulomb Potential	104
7	Morse Potential	106
8	Conclusions	108
9	The Levinson Theorem for Schrödinger Equation	109
1	Introduction	109
2	Scattering States and Phase Shifts	109
3	Bound States	111
4	The Sturm-Liouville Theorem	111
5	The Levinson Theorem	112
6	Discussions on General Case	114
7	Comparison Theorem	117
8	Conclusions	117
10	Generalized Hypervirial Theorem	119
1	Introduction	119
2	Generalized Blanchard's and Kramers' Recurrence Relations in Arbitrary Dimensions D	120
3	Applications to Certain Central Potentials	123
3.1	Coulomb-like Potential Case	123
3.2	Harmonic Oscillator	125
3.3	Kratzer Oscillator	126
4	Concluding Remarks	128
11	Exact and Proper Quantization Rules and Langer Modification . . .	129
1	Introduction	129
2	WKB Approximation	130
3	Exact Quantization Rule	133
4	Application to Trigonometric Rosen-Morse Potential	134
5	Proper Quantization Rule	136
6	Illustrations of Proper Quantization Rule	137
6.1	Energy Spectra for Modified Rosen-Morse Potential	137
6.2	Energy Spectra for the Coulombic Ring-Shaped Hartmann Potential	138
6.3	Energy Spectra for the Manning-Rosen Effective Potential	141
7	The Langer Modification and Maslov Index in D Dimensions . . .	142

8	Calculations of Logarithmic Derivatives of Wavefunction	144
9	Conclusions	146
12	Schrödinger Equation with Position-Dependent Mass	149
1	Introduction	149
2	Formalism	149
3	Applications to Harmonic Oscillator and Coulomb Potential	151
4	Conclusions	152
 Part IV Applications in Relativistic Quantum Mechanics		
13	Dirac Equation with the Coulomb Potential	157
1	Introduction	157
2	Exact Solutions of Hydrogen-like Atoms	157
3	Analysis of the Eigenvalues	162
4	Generalization to the Dirac Equation with a Coulomb Potential Plus a Scalar Potential	167
4.1	Introduction	167
4.2	Exact Solutions	167
4.3	Analysis of the Energy Level	172
5	Concluding Remarks	177
14	Klein-Gordon Equation with the Coulomb Potential	181
1	Introduction	181
2	Eigenfunctions and Eigenvalues	181
3	Analysis of the Eigenvalues	183
4	Generalization to the Klein-Gordon Equation with a Coulomb Potential Plus a Scalar Potential	188
4.1	Introduction	188
4.2	Eigenfunctions and Eigenvalues	188
4.3	Analysis of the Energy Levels	191
5	Comparison Theorem	200
6	Concluding Remarks	201
15	The Levinson Theorem for Dirac Equation	203
1	Introduction	203
2	Generalized Sturm-Liouville Theorem	204
3	The Number of Bound States	206
4	The Relativistic Levinson Theorem	208
5	Discussions on General Case	213
6	Friedel Theorem	216
7	Comparison Theorem	217
8	Concluding Remarks	218
16	Generalized Hypervirial Theorem for Dirac Equation	219
1	Introduction	219
2	Relativistic Recurrence Relation	219
3	Diagonal Case	223
4	Conclusions	224

17	Kaluza-Klein Theory	225
1	Introduction	225
2	$(4 + D)$ -Dimensional Kaluza-Klein Theories	229
3	Particle Spectrum of Kaluza-Klein Theories for Fermions	231
4	Warped Extra Dimensions	233
5	Conclusions	233
Part V Conclusions and Outlooks		
18	Conclusions and Outlooks	237
1	Conclusions	237
2	Outlooks	237
Appendix A	Introduction to Group Theory	239
1	Subgroups	240
2	Cosets	242
3	Conjugate Classes	243
4	Invariant Subgroups	244
Appendix B	Group Representations	247
1	Characters	248
2	Construction of Representations	248
3	Reducible and Irreducible Representations	250
4	Schur's Lemmas	251
5	Criteria for Irreducibility	251
6	Expansion of Functions in Basis Functions of Irreducible Representations	252
Appendix C	Fundamental Properties of Lie Groups and Lie Algebras	255
1	Continuous Groups	255
2	Infinitesimal Transformations and Lie Algebra	257
3	Structure of Compact Semisimple Lie Groups and Their Algebras	259
4	Irreducible Representations of Lie Groups and Lie Algebras	259
Appendix D	Angular Momentum Operators in Spherical Coordinates	261
Appendix E	Confluent Hypergeometric Functions	265
