<b>Preface</b>	<b>vii</b>
<b>1. Introduction</b>	<b>1</b>
<b>2. Linear and quasi-linear systems with piecewise constant argument</b>	<b>17</b>
2.1 Linear homogeneous systems . . . . .	18
2.2 Quasi-linear systems . . . . .	23
2.3 Stability . . . . .	27
Notes . . . . .	31
<b>3. The reduction principle for systems with piecewise constant argument</b>	<b>33</b>
3.1 Introduction . . . . .	33
3.2 Existence of integral surfaces . . . . .	35
3.3 Stability of the zero solution . . . . .	42
3.4 Stability of the integral surface . . . . .	43
3.5 Reduction principle . . . . .	45
Notes . . . . .	48
<b>4. The small parameter and differential equations with piecewise constant argument</b>	<b>49</b>
4.1 Periodic solutions: the non-critical case . . . . .	49
4.2 Dependence of solutions on parameters . . . . .	53
4.3 Periodic solutions: the critical case . . . . .	59
Notes . . . . .	68
<b>5. Stability</b>	<b>71</b>
5.1 The Lyapunov-Razumikhin method . . . . .	71
5.1.1 Theoretical results . . . . .	71
5.1.2 Examples . . . . .	78
5.2 The method of Lyapunov functions . . . . .	80
5.2.1 Main results . . . . .	81
5.2.2 Applications to the logistic equation . . . . .	86
Notes . . . . .	88
<b>6. The state-dependent piecewise constant argument</b>	<b>89</b>
6.1 Introduction . . . . .	89
6.2 Generalities . . . . .	89
6.3 Quasilinear systems . . . . .	93

6.4	Periodic solutions . . . . .	98
6.5	Stability of the zero solution . . . . .	100
	Notes . . . . .	104
<b>7.</b>	<b>Almost periodic solutions</b>	<b>105</b>
7.1	Introduction and Preliminaries . . . . .	105
7.2	Wexler sequences . . . . .	108
7.3	Bohr-Wexler almost periodic functions . . . . .	112
7.4	Almost periodic solutions . . . . .	114
7.5	Stability . . . . .	116
	Notes . . . . .	119
<b>8.</b>	<b>Stability of neural networks</b>	<b>121</b>
8.1	Introduction . . . . .	121
8.2	Preliminaries . . . . .	122
8.3	Main results . . . . .	127
8.4	Illustrative examples . . . . .	129
	Notes . . . . .	132
<b>9.</b>	<b>The blood pressure distribution</b>	<b>133</b>
9.1	Systemic arterial pressure . . . . .	133
9.1.1	Background on systemic arterial pressure . . . . .	133
9.1.2	The regular and irregular behavior of systemic arterial pressure when mo- ments of the heart contraction are prescribed . . . . .	135
9.1.3	Regular behavior of systemic arterial pressure with non prescribed moments of the heart contraction . . . . .	140
9.1.4	Investigation of stability . . . . .	141
9.1.5	Conclusion . . . . .	142
9.2	The global model . . . . .	143
9.2.1	Introduction and Preliminaries . . . . .	143
9.2.2	Bounded, periodic, eventually periodic and almost periodic solutions . . .	147
9.2.3	Stability and positiveness . . . . .	152
9.2.4	Discussion . . . . .	154
9.3	Chaotic dynamics . . . . .	156
9.3.1	Introduction and Preliminaries . . . . .	157
9.3.2	Stability and positiveness of bounded and periodic solutions . . . . .	158
9.3.3	Blood pressure dynamics as a special initial value problem: chaotic behavior	160
9.3.4	Periodic solutions revisited. Eventually periodic solutions . . . . .	161
9.3.5	Chaos . . . . .	164
9.3.6	Example . . . . .	169
	Notes . . . . .	171
<b>10.</b>	<b>Integrate-and-fire biological oscillators</b>	<b>175</b>
10.1	Introduction . . . . .	175
10.2	The prototype map . . . . .	177
10.3	Non-identical oscillators . . . . .	184
10.4	The Kamke condition . . . . .	189
10.5	The delayed pulse-coupling . . . . .	191
10.5.1	The couple of identical oscillators . . . . .	191

---

10.5.2	Non-identical oscillators: the general case . . . . .	195
10.5.3	The simulation result . . . . .	197
Notes	. . . . .	197
