<b>Preface</b>	<b>v</b>
<b>1. Activity Recognition: Approaches, Practices and Trends</b>	<b>1</b>
<i>Liming Chen, Ismail Khalil</i>	
1.1 Introduction . . . . .	1
1.2 Activity recognition approaches and algorithms . . . . .	3
1.2.1 Activity recognition approaches . . . . .	3
1.2.2 Activity recognition algorithms . . . . .	5
1.2.3 Ontology-based activity recognition . . . . .	8
1.3 The practice and lifecycle of ontology-based activity recognition . . . . .	10
1.3.1 Domain knowledge acquisition . . . . .	11
1.3.2 Formal ontology modelling . . . . .	12
1.3.3 Semantic sensor metadata creation . . . . .	13
1.3.4 Semantic sensor metadata storage and retrieval . . . . .	14
1.3.5 Activity recognition . . . . .	15
1.3.6 Activity model learning . . . . .	16
1.3.7 Activity assistance . . . . .	17
1.4 An exemplar case study . . . . .	18
1.5 Emerging research on activity recognition . . . . .	22
1.5.1 Complex activity recognition . . . . .	22
1.5.2 Domain knowledge exploitation . . . . .	24
1.5.3 Infrastructure mediated activity monitoring . . . . .	25
1.5.4 Abnormal activity recognition . . . . .	26
1.6 Conclusions . . . . .	26
References . . . . .	27

## 2. Possibilistic Activity Recognition 33

*P.C. Roy, S. Giroux, B. Bouchard, A. Bouzouane, C. Phua, A. Tolstikov,  
and J. Biswas*

2.1	Introduction . . . . .	33
2.2	Overall Picture of Alzheimer's disease . . . . .	36
2.3	Related Work . . . . .	37
2.4	Possibilistic Activity Recognition Model . . . . .	41
2.4.1	Environment Representation and Context . . . . .	42
2.4.2	Action Recognition . . . . .	42
2.4.3	Behavior Recognition . . . . .	45
2.4.4	Overview of the activity recognition process . . . . .	48
2.5	Smart Home Validation . . . . .	48
2.5.1	Results . . . . .	50
2.5.2	Discussion . . . . .	52
2.5.3	Summary of Our Contribution . . . . .	55
2.6	Conclusion . . . . .	56
	References . . . . .	56

## 3. Multi-user Activity Recognition in a Smart Home 59

*Liang Wang, Tao Gu, Xianping Tao, Hanhua Chen, and Jian Lu*

3.1	Introduction . . . . .	59
3.2	Related Work . . . . .	61
3.3	Multi-modal Wearable Sensor Platform . . . . .	63
3.4	Multi-chained Temporal Probabilistic Models . . . . .	64
3.4.1	Problem Statement . . . . .	64
3.4.2	Feature Extraction . . . . .	65
3.4.3	Coupled Hidden Markov Model . . . . .	66
3.4.4	Factorial Conditional Random Field . . . . .	68
3.4.5	Activity Models in CHMM and FCRF . . . . .	70
3.5	Experimental Studies . . . . .	71
3.5.1	Trace Collection . . . . .	71
3.5.2	Evaluation Methodology . . . . .	73
3.5.3	Accuracy Performance . . . . .	73

3.6	Conclusions and Future Work . . . . .	77
	References . . . . .	79
<b>4.</b>	<b>Smart Environments and Activity Recognition: a Logic-based Approach</b>	<b>83</b>
	<i>F. Mastrogiovanni, A. Scalmato, A. Sgorbissa, and R. Zaccaria</i>	
4.1	Introduction . . . . .	83
4.2	Related Work . . . . .	86
4.3	Representation of Temporal Contexts . . . . .	90
4.4	Assessment of Temporal Contexts . . . . .	97
4.5	Experimental Results and Discussion . . . . .	98
4.5.1	An Example of System Usage . . . . .	100
4.5.2	A Discussion about context assessment complexity and system performance . . . . .	105
4.6	Conclusion . . . . .	106
	References . . . . .	108
<b>5.</b>	<b>ElderCare: An Interactive TV-based Ambient Assisted Living Platform</b>	<b>111</b>
	<i>D. Lopez-de-Ipina, S. Blanco, X. Laiseca, I. Diaz-de-Sarralde</i>	
5.1	Introduction . . . . .	111
5.2	Related Work . . . . .	112
5.3	The ElderCare Platform . . . . .	114
5.3.1	Eldercare Platform Components . . . . .	116
5.4	Implementation Overview . . . . .	117
5.4.1	Eldercare's Local System . . . . .	118
5.4.2	ElderCare's Central Server . . . . .	119
5.4.3	ElderCare's Mobile Client . . . . .	120
5.5	Conclusion and Further Work . . . . .	124
	References . . . . .	124
<b>6.</b>	<b>An Ontology-based Context-aware Approach for Behaviour Analysis</b>	<b>127</b>
	<i>Shumei Zhang, Paul McCullagh, Chris Nugent, Huiru Zheng</i>	
6.1	Introduction . . . . .	127
6.2	Related Work . . . . .	129
6.3	Data Collection and Ontological Context Extraction . . . . .	131

6.3.1	Activity Context Extraction . . . . .	131
6.3.2	Location Context Detection . . . . .	132
6.3.3	Schedule Design . . . . .	134
6.4	Ontological ADL Modelling and Knowledge Base (KB) Building . . . .	135
6.4.1	Ontological Modelling . . . . .	135
6.4.2	Knowledge Base Building . . . . .	137
6.5	Experiments . . . . .	139
6.5.1	iMessenger Ontologies . . . . .	139
6.5.2	Rules Definition . . . . .	140
6.5.3	Case Study: Querying the Ontology Using SQWRL . . . . .	141
6.6	Discussion and future work . . . . .	145
	References . . . . .	146
<b>7.</b>	<b>User's Behavior Classification Model for Smart Houses Occupant Prediction</b>	<b>149</b>
	<i>R. Kadouche, H. Pigot, B. Abdulrazak, S. Giroux</i>	
7.1	Introduction . . . . .	149
7.2	Background and Related Work . . . . .	150
7.3	Our Approach . . . . .	151
7.3.1	Support Vector Machines (SVM) . . . . .	152
7.4	Experimentation . . . . .	153
7.4.1	DOMUS . . . . .	153
7.4.2	CASAS Smart Home Project . . . . .	157
7.5	Result and Discussion . . . . .	161
7.5.1	SVM Vs others classifiers . . . . .	161
7.5.2	BCM Accuracy Results' . . . . .	162
7.6	Conclusion . . . . .	163
	References . . . . .	163
<b>8.</b>	<b>Activity Recognition Benchmark</b>	<b>165</b>
	<i>T.L.M. van Kasteren, G. Englebienne and B.J.A. Kröse</i>	
8.1	Introduction . . . . .	165
8.2	Models . . . . .	166
8.2.1	Notation . . . . .	166
8.2.2	Naive Bayes . . . . .	167

8.2.3	Hidden Markov model . . . . .	168
8.2.4	Hidden semi-Markov model . . . . .	168
8.2.5	Conditional random fields . . . . .	169
8.2.6	Inference . . . . .	170
8.2.7	Learning . . . . .	171
8.3	Datasets . . . . .	172
8.3.1	Sensors Used . . . . .	172
8.3.2	Annotation . . . . .	173
8.3.3	Houses . . . . .	175
8.4	Experiments . . . . .	176
8.4.1	Experimental Setup . . . . .	176
8.4.2	Feature Representation . . . . .	177
8.4.3	Experiment 1: Timeslice Length . . . . .	177
8.4.4	Experiment 2: Feature Representations and Models . . . . .	180
8.5	Discussion . . . . .	180
8.6	Related and Future work . . . . .	183
8.7	Conclusion . . . . .	184
	References . . . . .	184

## **9. Smart Sweet Home** **187**

*N. Noury, J. Poujaud, A. Fleury, R. Nocua, T. Haddidi*

9.1	Introduction . . . . .	188
9.2	Daily Activities at Home . . . . .	188
9.2.1	State of the art in health smart homes . . . . .	189
9.3	Detection of activities with basic PIR sensors . . . . .	190
9.3.1	PIR sensors . . . . .	190
9.3.2	The HIS of Grenoble . . . . .	192
9.4	Ambulatograms . . . . .	193
9.5	Circadian activity rhythms? . . . . .	194
9.6	Night and day alternation . . . . .	196
9.7	Inactivity of Daily Living? . . . . .	197
9.8	Activities of daily living . . . . .	200
9.9	On the automatic detection of the ADL . . . . .	201
9.10	Discussion . . . . .	203

9.11	Conclusion . . . . .	205
	References . . . . .	205
<b>10.</b>	<b>Synthesising Generative Probabilistic Models for High-Level Activity Recognition</b>	<b>209</b>
	<i>C. Burghardt, M. Wurdel, S. Bader, G. Ruscher, and T. Kirste</i>	
10.1	Introduction & Motivation . . . . .	209
10.2	Related Work . . . . .	211
10.3	Preliminaries . . . . .	212
10.3.1	Hidden Markov Models . . . . .	212
10.3.2	Planning Problem . . . . .	213
10.3.3	Task Models . . . . .	215
10.3.4	Probabilistic Context-Free Grammars . . . . .	217
10.4	Synthesising Probabilistic Models . . . . .	218
10.4.1	From Task Models to Hidden Markov Models . . . . .	218
10.4.2	From Planning Problems to Hidden Markov Models . . . . .	220
10.4.3	From Probabilistic Context-Free Grammars to Hidden Markov Models . . . . .	222
10.4.4	Joint HMMs . . . . .	227
10.5	Discussion . . . . .	230
10.5.1	Planning operators . . . . .	230
10.5.2	Task models . . . . .	231
10.5.3	Probabilistic Context-Free Grammars . . . . .	232
10.5.4	Joint Hidden Markov Models . . . . .	232
10.6	Summary and Outlook . . . . .	233
	References . . . . .	233
<b>11.</b>	<b>Ontology-based Learning Framework for Activity Assistance in an Adaptive Smart Home</b>	<b>237</b>
	<i>G. Okeyo, L. Chen, H. Wang, and R. Sterritt</i>	
11.1	Introduction . . . . .	237
11.2	Related Work . . . . .	239
11.3	Activity and Behaviour Learning and Model Evolution Framework . . . . .	241
11.3.1	Rationale . . . . .	241

11.3.2	The Architecture . . . . .	243
11.3.3	The Process . . . . .	244
11.4	Activity Learning and Model Evolution Methods . . . . .	245
11.4.1	Preliminaries . . . . .	246
11.4.2	Learning Algorithm for Unlabelled Traces . . . . .	247
11.4.3	Learning Algorithm for Labelled Traces . . . . .	249
11.5	Behaviour Learning and Evolution Method . . . . .	251
11.5.1	Algorithm for Behaviour Learning . . . . .	253
11.6	Illustration . . . . .	254
11.6.1	Ontological modelling and representation . . . . .	254
11.6.2	Inferring and Logging ADL Activities . . . . .	257
11.6.3	Use scenario for ADL Learning and Evolution . . . . .	257
11.6.4	Use scenario for Behaviour Learning and Evolution . . . . .	259
11.7	Conclusion . . . . .	261
	References . . . . .	261
<b>12.</b>	<b>Benefits of Dynamically Reconfigurable Activity Recognition in Distributed Sensing Environments</b>	<b>265</b>
	<i>C. Lombriser, O. Amft, P. Zappi, L. Benini, and G. Tröster</i>	
12.1	Introduction . . . . .	265
12.2	Related Work . . . . .	267
12.3	Distributed activity recognition . . . . .	269
12.3.1	Distributed activity recognition architecture . . . . .	270
12.4	Dynamic reconfiguration of activity models . . . . .	272
12.4.1	Reconfiguration concept . . . . .	272
12.4.2	Reconfiguration granularities . . . . .	273
12.5	Implementation of the activity recognition chain . . . . .	274
12.5.1	Event recognition at distributed sensor nodes . . . . .	274
12.5.2	Network fusion of distributed detector events . . . . .	276
12.5.3	Architecture and reconfiguration complexity metrics . . . . .	276
12.5.4	Performance evaluation . . . . .	277
12.6	Evaluation dataset . . . . .	278
12.6.1	Experimental procedure . . . . .	279
12.6.2	Sensor node complexity . . . . .	280

12.7	Results . . . . .	280
12.7.1	Baseline results . . . . .	281
12.7.2	Setting-specific results . . . . .	281
12.7.3	Composite-specific results . . . . .	282
12.7.4	Object-specific results . . . . .	282
12.7.5	Costs of reconfiguration . . . . .	283
12.8	Discussion . . . . .	285
12.9	Conclusion . . . . .	288
	References . . . . .	288
