1	Synopsis	1
Part I Theory of Equations Over Languages and Automata		
2	Equations Over Languages and Finite Automata	9
2.1	Preliminaries on Languages and Finite Automata	9
2.1.1	Languages and Operators	9
2.1.2	Finite Automata and Regular Expressions	14
2.1.3	Classes of Languages.....	16
2.1.4	Composition of Languages.....	18
2.2	Solution of Equations Over Languages	21
2.2.1	Language Equations Under Synchronous Composition ..	21
2.2.2	Language Equations Under Parallel Composition	23
2.2.3	Language Equations Under Bounded Parallel Composition	25
2.3	Solution of Equations Over Regular Languages and Finite Automata.....	25
2.3.1	An Algorithm to Solve Equations Over Regular Languages and Automata	25
2.3.2	An Application to Converter Synthesis: The Protocol Mismatch Problem	28
	Problems	33
3	Equations Over Finite State Machines	37
3.1	Finite State Machines and Their Languages	37
3.1.1	Finite State Machines.....	37
3.1.2	Languages of FSMs	39
3.2	Composition of Finite State Machines	43
3.2.1	Synchronous Composition of FSMs	44
3.2.2	Parallel Composition of FSMs	47
3.2.3	Equations Over FSMs	48

3.3	Solution of FSM Equations Under Synchronous Composition	51
3.3.1	Largest FSM Solution	51
3.3.2	Restricted FSM Compositional Solutions	57
3.4	Solution of FSM Equations Under Parallel Composition	59
3.4.1	Largest FSM Solution	59
3.4.2	Restricted FSM Compositional Solutions	65
3.4.3	FSM Equations Under Bounded Parallel Composition ...	68
	Problems	70
4	Equations Over ω-Automata	73
4.1	ω -Languages and ω -Automata	73
4.2	Equations Over ω -Languages	78
4.2.1	Expansion and Restriction of ω -Languages	78
4.2.2	Parallel Composition of ω -Languages	79
4.2.3	Parallel Equations Over ω -Languages	80
4.2.4	Operations Over ω -Automata	80
	Problems	83
5	A Survey of Relevant Literature	85
5.1	Equations Under Synchronous Composition	85
5.1.1	Hierarchical Optimization and Don't Care Sequences ...	85
5.1.2	Computation of Input Don't Care Sequences	86
5.1.3	Computation of Output Don't Care Sequences	89
5.1.4	Computation of the Permissible Behaviors with the E-Machine	91
5.1.5	How to Exploit the Flexibility	92
5.1.6	FSM Network Synthesis by WS1S	93
5.1.7	Testing	96
5.1.8	Model Matching by Simulation Relations	96
5.1.9	Structural Replacement of Synchronous and Asynchronous Hardware	97
5.2	Equations Under Parallel Composition	98
5.2.1	Equations Over Process Languages and Process Algebras	98
5.2.2	Supervisory Control	99
5.2.3	Simulation Relations	99
5.2.4	Delay-Insensitive Processes	100
5.3	ω -Automata, Games, Realizability and Synthesis	100
	Problems	102

Part II Algorithms for Solving FSM Equations: BALM

6	Implementation of Automata Manipulations	109
6.1	Hybrid Representation of Finite Automata	110
6.2	Implementation of Particular Commands	111
6.2.1	STG Extraction	111

6.2.2	Completion	113
6.2.3	Determinization	114
6.2.4	Complementation	116
6.2.5	Support	116
6.2.6	Product	117
6.2.7	Prefix-Closed	117
6.2.8	Input-Progressive	117
	Problems	119
7	Manipulations of FSMs Represented as Sequential Circuits	121
7.1	Problem Statement	122
7.1.1	Monolithic Representation of Relations	125
7.1.2	Partitioned Representation of Relations	125
7.2	Computation Algorithms	126
7.2.1	Elementary Operations Using Partitioned Representations	126
7.3	Completion and Determinization Commute	131
7.4	Experimental Results	132
7.5	Conclusions	133
	Problems	134
8	The Software Package BALM	137
8.1	Introduction	137
8.2	Describing FSMs and Automata	138
8.2.1	The BLIF-MV Format	138
8.2.2	The AUT Format	140
8.2.3	Comparing the BLIF-MV and AUT Formats	142
8.2.4	Describing an Automaton Using BLIF-MV	145
8.3	Two Alternate Synthesis Flows	146
8.3.1	Some Specialized Automata Operations	147
8.4	Appendix: Commands in BALM	149
	Problems	151
9	Fundamental Operations in BALM	157
9.1	Extracting an Automaton from a Sequential Circuit	158
9.2	Completing an Automaton	159
9.3	Changing the Support	160
9.4	Determinizing	161
9.5	Taking the Product of Two Automata	162
	Problems	164
 Part III Application to Sequential Synthesis		
10	Computation of Flexibility in Sequential Networks	173
10.1	The Kim–Newborn’s Procedure	173
10.2	The Wang–Brayton’s Procedure	177

10.3	The Yevtushenko–Zharikova’s Procedure	182
	Problems	184
11	Computation of Sequential Flexibility in Netlists by Windowing	185
11.1	Complete Sequential Flexibility in a Window	185
11.2	Selecting a Window by Latch Splitting	187
11.3	Efficient Window Selection	188
11.3.1	Efficient Window Selection for Combinational Networks	188
11.3.2	Efficient Window Selection for Sequential Networks	191
12	Computation of Sequential Flexibility in Networks of FSMs by Windowing	195
12.1	Flexibility in Networks of FSMs	195
12.2	Windowing in a Network of FSMs	199
12.2.1	Windowing Via Solving a Set of Equations	199
12.2.2	Windowing Via Solving a System of Equations	203
12.3	Solving a System of FSM Equations	206
	Problems	208
13	Language Solving Using Simulation Relations	211
13.1	Model Matching by Simulation Relations	211
13.2	Computing Simulation Relations with Language Equations	214
13.3	Example with Latch Splitting	216
	Problems	222
14	Exploitation of Flexibility in Sequential Networks	227
14.1	The Problem	227
14.2	State Minimization	228
14.3	DCMIN: Immediate Equivalence Using Don’t Cares	230
14.4	Minimizing the Communication Lines	232
14.5	State Encoding	239
	Problems	239

Part IV More Applications of the Unknown Component Problem

15	Supervisory Control	247
15.1	Supervisory Control	247
15.2	Supervisory Control with Full Controllability and Observability ..	247
15.2.1	Special Case: S and P Prefix-Closed	248
15.2.2	General Case: S and P Not Prefix-Closed	249
15.2.3	Progressive Solutions Under Full Controllability	252
15.3	Supervisory Control with Partial Controllability	256
15.3.1	Supervisory Control Approach	256
15.3.2	Equation Solving Approach	256

15.4	Supervising a Cat and a Mouse in a Maze	259
	Problems	263
16	Testing	267
16.1	The Problem of Testing in Context	267
16.2	Solving Testing in Context Via Language Equations	268
	Problems	273
17	Synthesis of Strategies for Games	275
17.1	Formulating a Game as a Unknown Component Problem	275
17.2	Describing and Solving a Game: The Game of NIM	276
	Problems	278
18	Extending BALM to Synchronous Equations Over co-Büchi Specifications	283
18.1	Introduction	283
18.2	Büchi and co-Büchi Automata	285
18.3	Problem Statement	285
18.4	The Synthesis Flow	286
18.4.1	Computing a General Automaton Solution	287
18.4.2	Applying the co-Büchi Conditions to Obtain Particular FSM Solutions	289
18.4.3	Preprocessing to Simplify the SAT Instance	291
18.4.4	Complementing Büchi Automata	293
18.4.5	Solving for Büchi Specifications	293
18.5	Conclusions	294
	Problems	294
19	Conclusions and Open Problems	299
	References	301
	Index	309

The Unknown Component Problem

Theory and Applications

Villa, T.; Yevtushenko, N.; Brayton, R.K.; Mishchenko, A.;

Petrenko, A.; Sangiovanni-Vincentelli, A.

2012, XVI, 312 p., Hardcover
