1	Introduction	1
Part I Topics of Classical Optimal Control		
2	The Maximum Principle	9
2.1	Optimal Control Problem	9
2.1.1	Controlled Plant, Cost Functionals, and Terminal Set	9
2.1.2	Feasible and Admissible Control	11
2.1.3	Setting of the Problem in the General Bolza Form	11
2.1.4	Representation in the Mayer Form	12
2.2	Maximum Principle Formulation	12
2.2.1	Needle-Shaped Variations and Variational Equation	12
2.2.2	Adjoint Variables and MP Formulation for Cost Functionals with a Fixed Horizon	15
2.2.3	The Regular Case	18
2.2.4	Hamiltonian Form and Constancy Property	19
2.2.5	Variable Horizon Optimal Control Problem and Zero Property	21
2.2.6	Joint Optimal Control and Parametric Optimization Problem	23
2.2.7	Sufficient Conditions of Optimality	25
2.3	Appendix	28
2.3.1	Linear ODE and Liouville's Theorem	28
2.3.2	Bihari Lemma	31
2.3.3	Gronwall Lemma	34
2.3.4	The Lagrange Principle in Finite-Dimensional Spaces	34
3	Dynamic Programming	45
3.1	Bellman's Principle of Optimality	45
3.1.1	Formulation of the Principle	45
3.1.2	Sufficient Conditions for BPO	46
3.2	Invariant Embedding and Dynamic Programming	48
3.2.1	System Description and Basic Assumptions	48

3.2.2	The Dynamic Programming Equation in the Integral Form	49
3.2.3	The Hamilton–Jacobi–Bellman First-Order Partial Differential Equation and the Verification Theorem	50
3.3	HJB Smooth Solution Based on First Integrals	54
3.3.1	First Integrals	54
3.3.2	Structured Hamiltonians	55
3.3.3	HJB Solution Based on First Integrals	57
3.4	The Deterministic Feynman–Kac Formula: the General Smooth Case	60
3.5	The Viscosity Solutions Concept: Nonsmooth Case	63
3.5.1	Vanishing Viscosity	64
3.5.2	Definition of a Viscosity Solution	64
3.5.3	Existence of a Viscosity Solution	65
3.6	Time-Averaged Cost Optimal Control	66
3.6.1	Time-Averaged Cost Stationary Optimization: Problem Setting	66
3.6.2	HJB Equation and the Verification Rule	66
3.6.3	Affine Dynamics with a Quadratic Cost	67
4	Linear Quadratic Optimal Control	71
4.1	Formulation of the Problem	71
4.1.1	Nonstationary Linear Systems	71
4.1.2	Linear Quadratic Problem	72
4.2	Maximum Principle for the DLQ Problem	73
4.2.1	Formulation of the MP	73
4.2.2	Sufficiency Condition	74
4.3	The Riccati Differential Equation and Feedback Optimal Control	75
4.3.1	The Riccati Differential Equation	75
4.3.2	Linear Feedback Control	75
4.3.3	Analysis of the Differential Riccati Equation and the Uniqueness of Its Solution	78
4.4	Stationary Systems on the Infinite Horizon	82
4.4.1	Stationary Systems and the Infinite Horizon Cost Function	82
4.4.2	Controllability, Stabilizability, Observability, and Detectability	82
4.4.3	Sylvester and Lyapunov Matrix Equations	92
4.4.4	Direct Method	99
4.4.5	DPM Approach	101
4.5	Matrix Riccati Equation and the Existence of Its Solution	103
4.5.1	Hamiltonian Matrix	104
4.5.2	All Solutions of the Algebraic Riccati Equation	105
4.5.3	Hermitian and Symmetric Solutions	109
4.5.4	Nonnegative and Positive-Definite Solutions	116
4.6	Conclusions	118

5	Time-Optimization Problem	119
5.1	Nonlinear Time Optimization	119
5.1.1	Representation of the Cost Function	119
5.1.2	Hamiltonian Representation and Optimal Control	119
5.2	Linear Time Optimization	120
5.2.1	Structure of Optimal Control	120
5.2.2	Theorem on n -Intervals for Stationary Linear Systems	121
5.3	Solution of the Simplest Time-Optimization Problem	123
5.4	Conclusions	128

Part II The Tent Method

6	The Tent Method in Finite-Dimensional Spaces	131
6.1	Introduction	131
6.1.1	On the Theory of Extremal Problems	131
6.1.2	On the Tent Method	132
6.2	The Classical Lagrange Problem and Its Generalization	132
6.2.1	A Conditional Extremum	132
6.2.2	Abstract Extremal and Intersection Problems	134
6.2.3	Interpretation of the Mayer Problem	134
6.3	Basic Ideas of the Tent Method	135
6.3.1	Tent and Support Cone	135
6.3.2	Separable Convex Cones	136
6.3.3	How the Basic Theorems May Be Proven	138
6.3.4	The Main Topological Lemma	139
6.4	The Maximum Principle by the Tent Method	142
6.5	Brief Historical Remark	146
6.6	Conclusions	147
7	Extremal Problems in Banach Spaces	149
7.1	An Abstract Extremal Problem	149
7.1.1	Formulation of the Problem	149
7.1.2	The Intersection Theorem	149
7.2	Some Definitions Related to Banach Spaces	150
7.2.1	Planes and Convex Bodies	151
7.2.2	Smooth Manifolds	151
7.2.3	Curved Half-spaces	153
7.3	Tents in Banach Spaces	153
7.3.1	Definition of a Tent	153
7.3.2	Maximal Tent	154
7.4	Subspaces in the General Position	158
7.4.1	Main Definition	158
7.4.2	General Position for Subspaces in Banach Space	160
7.5	Separability of a System of Convex Cones	168
7.5.1	Necessary Conditions for Separability	168
7.5.2	Criterion for Separability	170

7.5.3	Separability in Hilbert Space	175
7.6	Main Theorems on Tents	176
7.6.1	Some Fundamental Theorems on Tents	176
7.6.2	Solution of the Abstract Intersection Problem	182
7.7	Analog of the Kuhn–Tucker Theorem for Banach Spaces	183
7.7.1	Main Theorem	183
7.7.2	Regular Case	186

Part III Robust Maximum Principle for Deterministic Systems

8	Finite Collection of Dynamic Systems	191
8.1	System Description and Basic Definitions	191
8.1.1	Controlled Plant	191
8.1.2	Admissible Control	192
8.2	Statement of the Problem	193
8.2.1	Terminal Conditions	193
8.2.2	Minimum Cost Function	193
8.2.3	Robust Optimal Control	194
8.3	Robust Maximum Principle	194
8.3.1	The Required Formalism	194
8.3.2	Robust Maximum Principle	197
8.4	Proof	198
8.4.1	Active Elements	198
8.4.2	Controllability Region	198
8.4.3	The Set Ω_0 of Forbidden Variations	199
8.4.4	Intersection Problem	199
8.4.5	Needle-Shaped Variations	200
8.4.6	Proof of the Maximality Condition	201
8.4.7	Proof of the Complementary Slackness Condition	202
8.4.8	Proof of the Transversality Condition	204
8.4.9	Proof of the Nontriviality Condition	204
8.5	Illustrative Examples	205
8.5.1	Single-Dimensional Plant	205
8.5.2	Numerical Examples	207
8.6	Conclusions	211
9	Multimodel Bolza and LQ Problem	213
9.1	Introduction	213
9.2	Min-Max Control Problem in the Bolza Form	214
9.2.1	System Description	214
9.2.2	Feasible and Admissible Control	214
9.2.3	Cost Function and Min-Max Control Problem	215
9.2.4	Representation of the Mayer Form	216
9.3	Robust Maximum Principle	218
9.4	Min-Max Linear Quadratic Multimodel Control	219
9.4.1	Formulation of the Problem	219

9.4.2	Hamiltonian Form and Parametrization of Robust Optimal Controllers	220
9.4.3	Extended Form of the Closed-Loop System	221
9.4.4	Robust Optimal Control	222
9.4.5	Robust Optimal Control for Linear Stationary Systems with Infinite Horizon	225
9.4.6	Numerical Examples	226
9.5	Conclusions	228
10	Linear Multimodel Time Optimization	229
10.1	Problem Statement	229
10.2	Main Results	230
10.2.1	Main Theorem	232
10.2.2	Existence Theorem	233
10.2.3	Uniqueness	233
10.2.4	Polytope Resource Set	234
10.2.5	The Generalized Feldbaum's n -Interval Theorem	234
10.3	Proofs	235
10.3.1	Proof of Theorem 10.1	236
10.3.2	Proof of Theorem 10.2	237
10.3.3	Proof of Theorem 10.3	237
10.3.4	Proof of Theorem 10.4	238
10.3.5	Proof of Theorem 10.5	239
10.4	Examples	240
10.4.1	Example 1	240
10.4.2	Example 2	242
10.4.3	Example 3	244
10.4.4	Example 4	245
10.4.5	Example 5	248
10.4.6	Example 6	249
10.5	Conclusions	251
11	A Measurable Space as Uncertainty Set	253
11.1	Problem Setting	253
11.1.1	Plant with Unknown Parameter	253
11.1.2	Terminal Set and Admissible Control	254
11.1.3	Maximum Cost Function	255
11.1.4	Robust Optimal Control	255
11.2	The Formalism	256
11.3	The Main Theorem	258
11.4	Proof of the Main Result	259
11.4.1	Application of the Tent Method	259
11.4.2	Needle-Shaped Variations and Proof of the Maximality Condition	260
11.4.3	Proof of Complementary Slackness Property	262
11.4.4	Transversality Condition Proof	263

11.4.5	Nontriviality Condition Proof	263
11.5	Some Special Cases	263
11.5.1	Comment on Possible Variable Horizon Extension	263
11.5.2	The Case of Absolutely Continuous Measures	264
11.5.3	Uniform-Density Case	265
11.5.4	Finite Uncertainty Set	265
11.5.5	May the Complementary Slackness Inequalities Be Replaced by the Equalities?	266
11.6	Conclusions	266
12	Dynamic Programming for Robust Optimization	269
12.1	Problem Formulation and Preliminary Results	269
12.2	Robust Version of the Hamilton–Jacobi–Bellman Equation	273
12.3	Dynamic Programming Approach to Multimodel LQ-Type Problems	281
12.4	Conclusions	283
13	Min-Max Sliding-Mode Control	285
13.1	Introduction	285
13.1.1	Brief Description of Sliding-Mode Control	285
13.1.2	Basic Assumptions and Restrictions	286
13.1.3	Main Contribution of this Chapter	287
13.1.4	Structure of the Chapter	287
13.2	Description of the System and Problem Setting	288
13.2.1	Plant Model	288
13.2.2	Control Strategy	288
13.2.3	Performance Index and Formulation of the Problem	289
13.3	Extended Model and Transformation to Regular Form	290
13.4	Min-Max Sliding Surface	292
13.5	Sliding-Mode Control Function Design	294
13.6	Minimal-Time Reaching Phase Control	295
13.7	Successive Approximation of Initial Sliding Hyperplane and Joint Optimal Control	298
13.8	Illustrative Examples	299
13.9	Conclusions	304
14	Multimodel Differential Games	307
14.1	On Differential Games	307
14.1.1	What Are Dynamic Games?	307
14.1.2	Short Review on LQ Games	308
14.1.3	Motivation of the Multimodel—Case Study	310
14.2	Multimodel Differential Game	311
14.2.1	Multimodel Game Descriptions	311
14.2.2	Robust Nash Equilibrium	312
14.2.3	Representation of the Mayer Form	312
14.3	Robust Nash Equilibrium for LQ Differential Games	316
14.3.1	Formulation of the Problem	316

14.3.2	Hamiltonian Equations for Players and Parametrized Strategies	317
14.3.3	Extended Form for the LQ Game	319
14.4	Numerical Procedure for Adjustment of the Equilibrium Weights	324
14.4.1	Some Convexity Properties of the Cost Functional as a Function of the Weights	324
14.4.2	Numerical Procedure	327
14.5	Numerical Example	330
14.6	Prey–Predator Differential Game	333
14.6.1	Multimodel Dynamics	333
14.6.2	Prey–Predator Differential Game	334
14.6.3	Individual Aims	335
14.6.4	Missile Guidance	335
14.7	Conclusions	339

Part IV Robust Maximum Principle for Stochastic Systems

15	Multipiant Robust Control	343
15.1	Introduction	343
15.1.1	A Short Review of Min-Max Stochastic Control	343
15.1.2	Purpose of the Chapter	345
15.2	Stochastic Uncertain System	346
15.3	A Terminal Condition and a Feasible and Admissible Control	348
15.4	Robust Optimal Stochastic Control Problem Setting	348
15.5	Robust Maximum Principle for Min-Max Stochastic Control	349
15.6	Proof of RSMP	352
15.6.1	Proof of Properties 1–3	352
15.6.2	Proof of Property 4 (Maximality Condition)	358
15.7	Some Important Comments	364
15.8	Illustrative Examples	365
15.8.1	Min-Max Production Planning	365
15.8.2	Min-Max Reinsurance-Dividend Management	371
15.9	Conclusions	375
16	LQ-Stochastic Multimodel Control	377
16.1	Min-Max LQ Control Problem Setting	377
16.1.1	Stochastic Uncertain Linear System	377
16.1.2	Feasible and Admissible Control	378
16.1.3	Robust Optimal Stochastic Control Problem Setting	379
16.2	Robust Maximum Principle for Min-Max LQ-Stochastic Control	380
16.2.1	The Presentation of the Problem in the Mayer Form	380
16.2.2	First- and the Second-Order Adjoint Equations	380
16.2.3	Hamiltonian Form	381
16.2.4	Basic Theorem on Robust Stochastic Optimal Control	382
16.2.5	Normalized Form for the Adjoint Equations	384
16.2.6	Extended Form for the Closed-Loop System	386

16.3	Riccati Equation and Robust Optimal Control	388
16.3.1	Robust Stochastic Optimal Control for Linear Stationary Systems with Infinite Horizon	391
16.3.2	Numerical Examples	394
16.4	Conclusions	396
17	A Compact Uncertainty Set	397
17.1	Problem Setting	397
17.1.1	Stochastic Uncertain System	397
17.1.2	A Terminal Condition, a Feasible and Admissible Control	399
17.1.3	Maximum Cost Function and Robust Optimal Control	400
17.2	Robust Stochastic Maximum Principle	401
17.2.1	First- and Second-Order Adjoint Processes	401
17.2.2	Main Result on GRSMOP	403
17.2.3	Proof of Theorem 1 (GRSMP)	405
17.3	Discussion	417
17.3.1	The Hamiltonian Structure	417
17.3.2	GRSMP for a Control-Independent Diffusion Term	417
17.3.3	The Case of Complete Information	418
17.3.4	Deterministic Systems	418
17.3.5	Comment on Possible Variable Horizon Extension	419
17.3.6	The Case of Absolutely Continuous Measures for the Uncertainty Set	420
17.3.7	Case of Uniform Density	420
17.3.8	Finite Uncertainty Set	421
17.4	Conclusions	421
