# Contents

<b>1</b>	<b>Linear Partial Differential Equations</b>	<b>1</b>
1.1	Introduction	1
1.2	Basic Concepts and Definitions	2
1.3	The Linear Superposition Principle	5
1.4	Some Important Classical Linear Model Equations	8
1.5	Second-Order Linear Equations and Method of Characteristics	10
1.6	The Method of Separation of Variables	21
1.7	Fourier Transforms and Initial Boundary-Value Problems	34
1.8	Multiple Fourier Transforms and Partial Differential Equations	46
1.9	Laplace Transforms and Initial Boundary-Value Problems	51
1.10	Hankel Transforms and Initial Boundary-Value Problems	61
1.11	Green's Functions and Boundary-Value Problems	70
1.12	Sturm–Liouville Systems and Some General Results	82
1.13	Energy Integrals and Higher Dimensional Equations	101
1.14	Fractional Partial Differential Equations	114
1.15	Exercises	125
<b>2</b>	<b>Nonlinear Model Equations and Variational Principles</b>	<b>149</b>
2.1	Introduction	149
2.2	Basic Concepts and Definitions	150
2.3	Some Nonlinear Model Equations	151
2.4	Variational Principles and the Euler–Lagrange Equations	159
2.5	The Variational Principle for Nonlinear Klein–Gordon Equations	171
2.6	The Variational Principle for Nonlinear Water Waves	171
2.7	The Euler Equation of Motion and Water Wave Problems	173
2.8	The Energy Equation and Energy Flux	192
2.9	Exercises	193
<b>3</b>	<b>First-Order, Quasi-linear Equations and Method of Characteristics</b>	<b>201</b>
3.1	Introduction	201
3.2	The Classification of First-Order Equations	202

3.3	The Construction of a First-Order Equation . . . . .	203
3.4	The Geometrical Interpretation of a First-Order Equation . . . . .	206
3.5	The Method of Characteristics and General Solutions . . . . .	208
3.6	Exercises . . . . .	221
<b>4</b>	<b>First-Order Nonlinear Equations and Their Applications . . . . .</b>	<b>227</b>
4.1	Introduction . . . . .	227
4.2	The Generalized Method of Characteristics . . . . .	228
4.3	Complete Integrals of Certain Special Nonlinear Equations . . . . .	231
4.4	The Hamilton–Jacobi Equation and Its Applications . . . . .	238
4.5	Applications to Nonlinear Optics . . . . .	246
4.6	Exercises . . . . .	254
<b>5</b>	<b>Conservation Laws and Shock Waves . . . . .</b>	<b>257</b>
5.1	Introduction . . . . .	257
5.2	Conservation Laws . . . . .	258
5.3	Discontinuous Solutions and Shock Waves . . . . .	270
5.4	Weak or Generalized Solutions . . . . .	271
5.5	Exercises . . . . .	277
<b>6</b>	<b>Kinematic Waves and Real-World Nonlinear Problems . . . . .</b>	<b>283</b>
6.1	Introduction . . . . .	283
6.2	Kinematic Waves . . . . .	284
6.3	Traffic Flow Problems . . . . .	286
6.4	Flood Waves in Long Rivers . . . . .	297
6.5	Chromatographic Models and Sediment Transport in Rivers . . . . .	300
6.6	Glacier Flow . . . . .	305
6.7	Roll Waves and Their Stability Analysis . . . . .	307
6.8	Simple Waves and Riemann’s Invariants . . . . .	311
6.9	The Nonlinear Hyperbolic System and Riemann’s Invariants . . . . .	329
6.10	Generalized Simple Waves and Generalized Riemann’s Invariants . . . . .	338
6.11	The Lorenz System of Nonlinear Differential Equations and Deterministic Chaos . . . . .	342
6.12	Exercises . . . . .	346
<b>7</b>	<b>Nonlinear Dispersive Waves and Whitham’s Equations . . . . .</b>	<b>355</b>
7.1	Introduction . . . . .	355
7.2	Linear Dispersive Waves . . . . .	356
7.3	Initial-Value Problems and Asymptotic Solutions . . . . .	359
7.4	Nonlinear Dispersive Waves and Whitham’s Equations . . . . .	361
7.5	Whitham’s Theory of Nonlinear Dispersive Waves . . . . .	364
7.6	Whitham’s Averaged Variational Principle . . . . .	367
7.7	Whitham’s Instability Analysis of Water Waves . . . . .	369
7.8	Whitham’s Equation: Peaking and Breaking of Waves . . . . .	371
7.9	Exercises . . . . .	377

<b>8</b>	<b>Nonlinear Diffusion–Reaction Phenomena</b>	<b>381</b>
8.1	Introduction	381
8.2	Burgers Equation and the Plane Wave Solution	382
8.3	Traveling Wave Solutions and Shock-Wave Structure	384
8.4	The Exact Solution of the Burgers Equation	386
8.5	The Asymptotic Behavior of the Burgers Solution	391
8.6	The $N$ -Wave Solution	392
8.7	Burgers Initial- and Boundary-Value Problem	394
8.8	Fisher Equation and Diffusion–Reaction Process	396
8.9	Traveling Wave Solutions and Stability Analysis	399
8.10	Perturbation Solutions of the Fisher Equation	402
8.11	Method of Similarity Solutions of Diffusion Equations	404
8.12	Nonlinear Reaction–Diffusion Equations	412
8.13	Brief Summary of Recent Work	416
8.14	Exercises	417
<b>9</b>	<b>Solitons and the Inverse Scattering Transform</b>	<b>425</b>
9.1	Introduction	425
9.2	The History of the Solitons and Soliton Interactions	426
9.3	The Boussinesq and Korteweg–de Vries Equations	431
9.4	Solutions of the KdV Equation: Solitons and Cnoidal Waves	458
9.5	The Lie Group Method and Similarity Analysis of the KdV Equation	466
9.6	Conservation Laws and Nonlinear Transformations	469
9.7	The Inverse Scattering Transform (IST) Method	474
9.8	Bäcklund Transformations and the Nonlinear Superposition Principle	494
9.9	The Lax Formulation and the Zakharov and Shabat Scheme	499
9.10	The AKNS Method	506
9.11	Asymptotic Behavior of the Solution of the KdV–Burgers Equation	508
9.12	Strongly Dispersive Nonlinear Equations and Compactons	509
9.13	The Camassa–Holm (CH) and Degasperis–Procesi (DP) Nonlinear Model Equations	518
9.14	Exercises	528
<b>10</b>	<b>The Nonlinear Schrödinger Equation and Solitary Waves</b>	<b>535</b>
10.1	Introduction	535
10.2	The One-Dimensional Linear Schrödinger Equation	536
10.3	The Nonlinear Schrödinger Equation and Solitary Waves	537
10.4	Properties of the Solutions of the Nonlinear Schrödinger Equation	541
10.5	Conservation Laws for the NLS Equation	547
10.6	The Inverse Scattering Method for the Nonlinear Schrödinger Equation	550
10.7	Examples of Physical Applications in Fluid Dynamics and Plasma Physics	552

10.8	Applications to Nonlinear Optics	567
10.9	Exercises	575
<b>11</b>	<b>Nonlinear Klein–Gordon and Sine-Gordon Equations</b>	<b>579</b>
11.1	Introduction	579
11.2	The One-Dimensional Linear Klein–Gordon Equation	580
11.3	The Two-Dimensional Linear Klein–Gordon Equation	582
11.4	The Three-Dimensional Linear Klein–Gordon Equation	584
11.5	The Nonlinear Klein–Gordon Equation and Averaging Techniques	585
11.6	The Klein–Gordon Equation and the Whitham Averaged Variational Principle	592
11.7	The Sine-Gordon Equation: Soliton and Antisoliton Solutions	594
11.8	The Solution of the Sine-Gordon Equation by Separation of Variables	598
11.9	Bäcklund Transformations for the Sine-Gordon Equation	605
11.10	The Solution of the Sine-Gordon Equation by the Inverse Scattering Method	608
11.11	The Similarity Method for the Sine-Gordon Equation	611
11.12	Nonlinear Optics and the Sine-Gordon Equation	612
11.13	Nonlinear Lattices and the Toda-Lattice Soliton	615
11.14	Exercises	619
<b>12</b>	<b>Asymptotic Methods and Nonlinear Evolution Equations</b>	<b>623</b>
12.1	Introduction	623
12.2	The Reductive Perturbation Method and Quasi-linear Hyperbolic Systems	625
12.3	Quasi-linear Dissipative Systems	628
12.4	Weakly Nonlinear Dispersive Systems and the Korteweg–de Vries Equation	630
12.5	Strongly Nonlinear Dispersive Systems and the NLS Equation	641
12.6	The Perturbation Method of Ostrovsky and Pelinovsky	646
12.7	The Method of Multiple Scales	649
12.8	Asymptotic Expansions and Method of Multiple Scales	656
12.9	Derivation of the NLS Equation and Davey–Stewartson Evolution Equations	663
12.10	Exercises	674
<b>13</b>	<b>Tables of Integral Transforms</b>	<b>675</b>
13.1	Fourier Transforms	675
13.2	Fourier Sine Transforms	677
13.3	Fourier Cosine Transforms	679
13.4	Laplace Transforms	680
13.5	Hankel Transforms	683
13.6	Finite Hankel Transforms	686

<b>A</b>	<b>Some Special Functions and Their Properties</b>	689
A-1	Gamma, Beta, and Error Functions	689
A-2	Bessel and Airy Functions	697
A-3	Legendre and Associated Legendre Functions	703
A-4	Jacobi and Gegenbauer Polynomials	706
A-5	Laguerre and Associated Laguerre Functions	710
A-6	Hermite Polynomials and Weber–Hermite Functions	712
A-7	Mittag-Leffler Function	713
A-8	The Jacobi Elliptic Integrals and Elliptic Functions	715
<b>B</b>	<b>Fourier Series, Generalized Functions, and Fourier and Laplace Transforms</b>	719
B-1	Fourier Series and Its Basic Properties	719
B-2	Generalized Functions (Distributions)	740
B-3	Basic Properties of the Fourier Transforms	751
B-4	Basic Properties of Laplace Transforms	758
<b>C</b>	<b>Answers and Hints to Selected Exercises</b>	767
1.15	Exercises	767
2.9	Exercises	785
3.6	Exercises	788
4.6	Exercises	794
5.5	Exercises	796
6.12	Exercises	799
7.9	Exercises	803
8.14	Exercises	805
9.14	Exercises	807
10.9	Exercises	808
11.14	Exercises	809
12.10	Exercises	809
	<b>Bibliography</b>	813
	<b>Index</b>	847
