

Contents

1	Introduction	1
2	Clifford Algebra in Euclidean 3-Space	3
2.1	Reflections, Rotations, and Quaternions in E^3	3
2.1.1	Using Square Matrices to Represent Vectors	3
2.1.2	1-Vectors, 2-Vectors, 3-Vectors, and Clifford Numbers	5
2.1.3	Reflection and Rotation Operators	6
2.1.4	Quaternions	8
2.2	The 4π Periodicity of the Rotation Operator	13
2.3	*The Point Groups for the Regular Polyhedrons	15
2.4	*Élie Cartan 1869–1951	23
2.5	*Suggested Reading	25
3	Clifford Algebra in Minkowski 4-Space	27
3.1	A Small Dose of Special Relativity	27
3.2	*Albert Einstein 1879–1955	37
3.3	*Suggested Reading	45
4	Clifford Algebra in Flat n-Space	47
4.1	Clifford Algebra	47
4.2	The Scalar Product and Metric Tensor	53
4.3	The Exterior Product for p-Vectors	61
4.4	Some Useful Formulas	65
4.5	Gram–Schmidt Formulas	68
4.6	*The Qibla (Kibla) Problem	69
4.7	*Mathematics of Arab Speaking Muslims	74
4.7.1	*Greek Science and Mathematics in Alexandria	74
4.7.2	*Hypatia	77
4.7.3	*The Rise of Islam and the House of Wisdom	79
4.7.4	*The Impact of Al-Ghazālī	86

4.7.5	*Claudius Ptolemy, Al-Tūsī, Al-'Urdī, Ibn al-Shātir, Nicholas Copernicus, Tycho Brahe, Johannes Kepler, and Isaac Newton	89
4.8	*Christopher Columbus and Some Bad Geography	109
4.9	*Clifford and Grassmann	110
4.9.1	*William Kingdon Clifford 1845–1879	110
4.9.2	*Hermann Günther Grassmann 1809–1877	116
5	Curved Spaces	121
5.1	Gaussian Curvature (Informal)	121
5.2	n-Dimensional Curved Surfaces (Spaces)	127
5.3	The Intrinsic Derivative ∇_k	132
5.4	Parallel Transport and Geodesics	138
5.5	The Riemann Tensor and the Curvature 2-form	142
5.6	Fock–Ivanenko Coefficients	147
5.6.1	Moving Frames	147
5.6.2	Gauss Curvature via Fock–Ivanenko Coefficients	151
5.6.3	*The Riemann Tensor for Orthonormal Frames	162
5.7	*Doing Physics Under Stalin	165
5.7.1	*George Gamow 1904–1968	166
5.7.2	*Lev Davidovich Landau 1908–1968	167
5.7.3	*Matvei Petrovich Bronstein 1906–1938	170
5.7.4	*Vladimir Alexandrovich Fock 1898–1974	172
5.7.5	*Dmitrii Dmitrievich Ivanenko 1904–1994	174
6	The Gauss–Bonnet Formula	181
6.1	The Exterior Derivative and Stokes' Theorem	181
6.2	*Curvature via Connection 1-Forms	186
6.3	Geodesic Curvature on a 2-dimensional Surface	189
6.4	*Huygens' Pendulum Clock and the Cycloid	195
6.5	The Gauss–Bonnet Formula	202
6.6	The Interpretation of Curvature 2-Forms as Infinitesimal Rotation Operators	209
6.7	*Euler's Theorem for Convex Polyhedrons	210
6.8	*Carl Friedrich Gauss and Bernard Riemann	212
6.8.1	*Carl Friedrich Gauss 1777–1855	212
6.8.2	*Georg Friedrich Bernhard Riemann 1826–1866	223
7	Some Extrinsic Geometry in E^n	227
7.1	The Frenet Frame	227
7.2	*Arbitrary Speed Curves with Formulas	241
7.3	Ruled Surfaces and Developable Surfaces	249
7.4	*Archimedes' Screw	255
7.5	Principal Curvatures	256
7.5.1	The Normal and Geodesic Curvature Vectors	256
7.5.2	The Weingarten Map or Shape Operator	261

7.5.3	Principal Directions and Curvatures	262
7.6	*Leonhard Euler 1707–1783.....	272
7.7	*Involutives	280
7.8	Theorema Egregium.....	283
7.9	*The Gauss Map	286
7.10	*Isometries	289
7.10.1	*Isometry of Surfaces with Constant Gaussian Curvature.....	289
7.10.2	*Isometries for Surfaces with Nonconstant Gaussian Curvature	294
8	*Non-Euclidean (Hyperbolic) Geometry.....	299
8.1	*Early Developments	299
8.2	*The Poincaré Model and Reflections.....	303
8.3	*Direct Non-Euclidean Transformations.....	310
8.4	*Möbius Transformations.....	314
8.4.1	*The Cross Ratio	317
8.4.2	*Fixed Points	319
8.5	*The Distance Function.....	322
8.6	*The Law of Cosines and the Law of Sines.....	326
8.7	*Tessellations.....	329
9	*Ruled Surfaces Continued	333
9.1	*Lines of Stricture.....	333
9.2	*Gaussian Curvature of Ruled Surfaces.....	340
9.3	*The Cusp at the Edge of Regression	342
10	*Lines of Curvature	347
10.1	*Computing Lines of Curvature	347
10.1.1	*Intrinsic Projection Operators for Real Symmetric Linear Operators	347
10.1.2	*The Computation of Principal Directions from Intrinsic Projection Operators.....	353
10.1.3	*The Computation of Lines of Curvature	355
10.2	*Two Useful Theorems for Lines of Curvature	359
10.3	*Confocal Coordinates in n -Dimensions	364
10.4	*The Nondeformability of a Hypersurface.....	371
11	*Minimal Surfaces.....	375
11.1	*Why are Minimal Surfaces Said to be Minimal?	375
11.2	*Minimal Surfaces and Harmonic Functions	379
11.3	*The Enneper–Weierstrass Representations	391
12	Some General Relativity	395
12.1	Einstein’s Theory	395
12.2	*Karl Schwarzschild 1873–1916	399
12.3	The Schwarzschild Metric	404

12.4	The Precession of Mercury	412
12.5	The Bending of Light	424
A	A Matrix Representation of a Clifford Algebra	431
B	Construction of Matrix Representations for Dirac Vectors	437
C	A Few Terms of the Taylor's Series for the Urdī- Copernican Model for the Outer Planets	441
D	A Few Terms of the Taylor's Series for Kepler's Orbits.....	445
	References.....	449
	Index.....	459

A New Approach to Differential Geometry using Clifford's
Geometric Algebra

Snygg, J.

2012, XVII, 465 p. 102 illus., Hardcover

ISBN: 978-0-8176-8282-8

A product of Birkhäuser Basel
