ANHA Series Preface	vii
Preface	xi
1 The Bell Labs Theory	1
1.1 Information Theory of Time and Band Limiting	1
1.2 Time- and Frequency-localization Operators	2
1.2.1 Paley–Wiener Spaces on $\mathbb{R}$ and Localization Projections ...	2
1.2.2 Prolate Spheroidal Wave Functions	4
1.2.3 Time–Frequency Properties of PSWFs	9
1.2.4 Further Analytical and Numerical Properties	14
1.2.5 Eigenvalues for Time and Band Limiting: Asymptotics	19
1.3 Landau and Widom’s $2T\Omega$ Theorem	22
1.4 Discrete and Finite Analogues	26
1.4.1 The Slepian DPS Sequences	26
1.4.2 Numerical Computation of DPS Sequences	34
1.5 Notes and Auxiliary Results	35
1.5.1 Extrapolation of Band-limited Signals	35
1.5.2 Commutants of Symmetric, Tridiagonal Matrices	38
1.5.3 Proofs of Technical Lemmas for Theorem 1.3.1	41
2 Numerical Aspects of Time and Band Limiting	45
2.1 Oscillation Properties	46
2.1.1 Chebyshev and Markov Systems	47
2.1.2 Oscillating Matrices and Kernels	50
2.1.3 Sturm–Liouville Theory	53
2.2 Quadratures	57
2.3 Local Sampling Formulas	64
2.3.1 Uniform Oversampling	64
2.3.2 Local Approximate Sampling with Prolates	65
2.4 Spectral Elements for Differential Equations	69

2.4.1	Modal and Nodal Bases	69
2.4.2	Computing Quadratures	71
2.4.3	Convergence and Continuously Adjusted Spectral Parameters	74
2.5	Prolate Expansions of Non-band-limited Functions	74
2.6	Notes and Auxiliary Results	78
2.6.1	Miscellaneous Results on Prolates	78
2.6.2	Proof of Theorem 2.1.15	83
2.6.3	Proof of Corollary 2.2.7	87
2.6.4	Proofs of Other Auxiliary Lemmas for Theorem 2.5.2	89
3	Thomson's Multitaper Method and Applications to Channel Modeling	91
3.1	Estimation of Quasi-stationary Processes	91
3.1.1	Thomson's DPSWF-Based Multitaper Method	91
3.1.2	Bias, Variance, and Bandwidth Estimation	97
3.1.3	Maximum Likelihood and the Karhunen–Loève Transform	99
3.2	Time and Band Limiting for Communications Channels	103
3.2.1	Prediction of Fading Envelopes	103
3.2.2	Modeling Multipath Channels	105
3.2.3	Basis Expansion Models for Channel Estimation	109
3.2.4	A Multi-carrier, Time-varying Channel Model	116
3.3	Notes and Auxiliary Results	118
3.3.1	DPS Sequences and Code Design	118
3.3.2	Further Aspects of DPSSs in Channel Modeling	120
3.3.3	Further Aspects of Multitaper Spectrum Estimation	121
4	Time and Band Limiting of Multiband Signals	129
4.1	The Area Theorem for Unions of Time–Frequency Rectangles	129
4.1.1	Landau and Widom's Theorem for Multiple Intervals	129
4.1.2	The Number of Eigenvalues of $P_\Omega Q_T$ Larger than $1/2$	131
4.2	Probabilistic Norm Bounds for Sparse Time–Frequency Products	134
4.3	Proof of the Main Proposition	141
4.3.1	Relational Calculus on $\mathbb{Z}_N^{2n}$	141
4.3.2	Traces of Powers of $H_{S\Omega}$	143
4.3.3	Combinatorics for Exponential Sums	144
4.4	Notes and Auxiliary Results	149
4.4.1	Miscellaneous Multiband Issues	149
4.4.2	Proof of the Inclusion–Exclusion Relation	150
5	Sampling of Band-limited and Multiband Signals	153
5.1	Sampling of Band-limited Signals	153
5.1.1	The Roles of Harmonic Analysis and Function Theory	153
5.1.2	The Shannon Sampling Theorem	155
5.1.3	Criteria for Reconstructing Band-limited Signals	156
5.1.4	Sampling and Interpolation: Riesz Bases	164

5.2	Fourier Frames	165
5.2.1	Frame Diameter: Jaffard's Criterion	166
5.2.2	Characterizing Fourier Frames	171
5.3	Sampling Schema for Multiband Signals	176
5.3.1	When Σ is a Union of Commensurate Intervals	178
5.3.2	Venkataramani and Bresler's Multicoset Method	183
5.4	Notes and Auxiliary Results	186
5.4.1	More on Sampling of Band-limited Functions	186
5.4.2	Other Approaches to Sampling of Multiband Signals	187
5.4.3	Universal Sampling and Fourier Frames	196
5.4.4	Further Miscellaneous Aspects of Sampling	198
6	Time-localized Sampling Approximations	199
6.1	Localization and Sampling on $\mathbb{R}$: General Properties	199
6.1.1	Time Localization and Sampling in RKHSs	199
6.1.2	Time-Frequency Localization for Unions	201
6.2	Sampling Formulas for Prolates	202
6.2.1	Samples of PSWFs	203
6.2.2	Quadratic Decay for PSWF Samples	205
6.2.3	Approximate Time-localized Projections	208
6.2.4	Accurate Estimates of Integer Samples of PSWFs	209
6.3	Notes and Auxiliary Results	213
6.3.1	Sampling and Interpolation for Eigenfunctions of Multiband Localization Operators	213
6.3.2	Güntürk and DeVore's Bump Function Estimate	216
6.3.3	Error Bounds for the Walter-Shen-Soleski Method	217
6.3.4	More on Karoui and Moumni's Method	217
6.3.5	Finite Models for Continuous Signals	218
6.3.6	Further Miscellaneous Results	220
A	Notation and Mathematical Prerequisites	223
A.1	Notation and Disclaimers	223
A.2	Mathematical Prerequisites	224
A.2.1	Functional Analysis Prerequisites	225
A.2.2	Fourier Analysis Prerequisites	228
A.2.3	Approximation Miscellany	231
A.2.4	Useful Facts: ODEs and Special Functions Theory	232
A.2.5	Prerequisites from Probability and Statistics	233
	List of Symbols	235
	List of Acronyms	237
	References	239
	Index	255

Duration and Bandwidth Limiting

Prolate Functions, Sampling, and Applications

Hogan, J.A.; Lakey, J.D.

2012, XVII, 258 p. 14 illus., Hardcover

ISBN: 978-0-8176-8306-1

A product of Birkhäuser Basel
