

Contents

1. Spaces of Summable Functions and Partial Differential Equations	1
1.1 Fourier Series and Partial Differential Equations	1
1.1.1 The Laplace, Heat and Wave Equations	1
a. Laplace's and Poisson's equation	1
b. The heat equation	3
c. The wave equation	6
1.1.2 The method of separation of variables	7
a. Laplace's equation in a rectangle	8
b. Laplace's equation on a disk	11
c. The heat equation	14
d. The wave equation	15
1.2 Lebesgue's Spaces	16
1.2.1 The space L^∞	16
1.2.2 L^p spaces, $1 \leq p < +\infty$	18
a. The L^p norm	18
b. Approximation	20
c. Separability	22
d. Duality	22
e. L^2 is a separable Hilbert space	23
f. Means	23
1.2.3 Trigonometric series in L^2	25
1.2.4 The Fourier transform	28
a. The Fourier transform in $\mathcal{S}(\mathbb{R}^n)$	29
b. The Fourier transform in L^2	31
1.3 Sobolev Spaces	33
a. Strong derivatives	33
b. Weak derivatives	35
c. Absolutely continuous functions	37
d. H^1 -periodic functions	37
e. Poincaré's inequality	40
f. Rellich's compactness theorem	41
g. Traces	43
1.4 Existence Theorems for PDE's	43
1.4.1 Dirichlet's principle	43
a. The weak form of the equilibrium equation	44

b.	The space H^{-1}	46
c.	The abstract Dirichlet principle	47
d.	The Dirichlet problem	48
e.	Neumann problem	51
f.	Cauchy–Riemann equations	54
1.4.2	The alternative theorem	54
1.4.3	The Sturm–Liouville theory	57
1.4.4	Convex functionals on H_0^1	63
1.5	Exercises	63
2.	Convex Sets and Convex Functions	67
2.1	Convex Sets	67
a.	Definitions	67
b.	The support hyperplanes	69
c.	Convex hull	72
d.	The distance function from a convex set	73
e.	Extreme points	76
2.2	Proper Convex Functions	76
a.	Definitions	76
b.	A few characterizations of convexity	77
c.	Support function	78
d.	Convex functions of class C^1 and C^2	80
e.	Lipschitz continuity of convex functions	82
f.	Supporting planes and differentiability	83
g.	Extremal points of convex functions	86
2.3	Convex Duality	87
a.	The polar set of a convex set	87
b.	The Legendre transform for functions of one variable	89
c.	The Legendre transform for functions of several variables	90
2.4	Convexity at Work	91
2.4.1	Inequalities	91
a.	Jensen inequality	91
b.	Inequalities for functions of matrices	93
c.	Doubly stochastic matrices	94
2.4.2	Dynamics: Action and energy	97
2.4.3	The thermodynamic equilibrium	99
a.	Pure and mixed phases	102
2.4.4	Polyhedral sets	104
a.	Regular polyhedra	104
b.	Implicit convex cones	105
c.	Parametrized convex cones	106
d.	Farkas–Minkowski’s lemma	108
2.4.5	Convex optimization	109
2.4.6	Stationary states for discrete-time Markov processes	112
2.4.7	Linear programming	114

a.	The primal and dual problem	117
2.4.8	Minimax theorems and the theory of games	121
a.	The minimax theorem of von Neumann	122
b.	Optimal mixed strategies	127
c.	Nash equilibria	128
d.	Convex duality	130
2.5	A General Approach to Convexity	133
a.	Definitions	133
b.	Lower semicontinuous functions and closed epigraphs	134
c.	The Fenchel transform	138
d.	Convex duality revisited	140
2.6	Exercises	146
3.	The Formalism of the Calculus of Variations	149
3.1	Lagrangian Formalism	151
3.1.1	Euler–Lagrange equations	151
a.	Dirichlet’s problem	152
b.	Natural boundary conditions	154
c.	Examples	155
3.1.2	Some remarks on the existence and regularity of minimizers	164
a.	Existence	165
b.	Regularity in the 1-dimensional case	167
3.1.3	Constrained variational problems	169
a.	Isoperimetric constraints	170
b.	Holonomic constraints	172
3.1.4	Noether’s theorem	177
a.	General variations	178
b.	Inner variations	179
c.	Curves of minimal energy and curves of minimal length	181
d.	Surfaces of minimal energy and surfaces of minimal area	183
e.	Noether theorem	184
3.1.5	The eikonal and the Huygens principle	186
a.	Calibrations and fields of extremals	187
b.	Mayer fields	189
c.	The Weierstrass representation formula	190
d.	Huygens principle	191
3.2	The Classical Hamiltonian Formalism	193
3.2.1	The canonical equations of Hamilton and Hamilton–Jacobi	193
a.	Hamilton equations	194
b.	Liouville’s theorem	195
c.	Hamilton–Jacobi equation	195
d.	Poincaré–Cartan integral	196

e. Cyclic variables	197
f. Hamilton's approach to geometrical optics	198
3.2.2 Canonical transformations	201
a. Canonical transformations	202
b. Analytic mechanics and Schrödinger equations	208
3.3 Exercises	210
4. Differential Forms	213
4.1 Multivectors and Covectors	213
4.1.1 The exterior algebra	213
a. Alternating bilinear maps, antisymmetric matrices and 2-vectors	213
b. k -alternating maps	215
c. k -vectors	217
d. k -vectors in coordinates	218
e. The exterior algebra and the exterior product	220
f. k -covectors	220
g. Linear transformations	222
h. The determinant	224
i. Inner product of multivectors	225
j. The Jacobian and the Cauchy–Binet formula	226
4.1.2 Subspaces and k -vectors	227
a. Simple vectors	227
b. Simple vectors and k -subspaces	228
c. Orientation and simple k -vectors	229
4.1.3 Vector product and Hodge operator	230
a. Hodge operator	230
b. Vector product	232
4.2 Integration of Differential k -Forms	233
4.2.1 Differential k -forms	233
a. Exterior differential	233
b. Pull-back of differential forms	234
4.2.2 The area formula on submanifolds	236
a. The area formula	236
b. The area formula on submanifolds	237
4.2.3 The oriented integral	239
a. Oriented open sets in \mathbb{R}^k	240
b. Oriented k -submanifolds of \mathbb{R}^n	240
c. Admissible open sets	240
d. Immersions and C^1 images of an open set	241
e. C^1 images of oriented submanifolds	243
4.2.4 Integration and pull-back	244
4.3 Stokes's Theorem	247
4.3.1 The theorem	247
4.3.2 Some applications	249
a. Piola's identities	249
b. Brouwer's fixed point theorem	250

	c. Brouwer's degree	250
	d. Gauss-Bonnet's theorem	252
	e. Linking number	253
4.4	Vector Calculus	255
4.4.1	Codifferential	255
4.4.2	Laplace's operator on forms	257
4.4.3	Vector calculus in two dimensions	259
4.4.4	Vector calculus in three dimensions	260
	a. Stokes's theorem in \mathbb{R}^3	262
4.5	Closed and Exact Forms	265
4.5.1	Poincaré's lemma	266
4.5.2	The homotopy formula	268
4.5.3	A theorem by de Rham	269
4.5.4	Hodge's decomposition formula	274
4.5.5	Maxwell equations	275
4.6	Exercises	281
5.	Measures and Integration	283
5.1	Measures	283
5.1.1	Set functions and measures	283
	a. Continuity properties of measures	285
5.1.2	Lebesgue's measure	285
	a. Lebesgue's outer measure	285
	b. On the additivity of \mathcal{L}^{n*}	286
	c. Approximation by denumerable unions of intervals: Measurable sets	287
	d. Measurable sets and additivity	288
5.1.3	A few complements	290
	a. A Riemann nonintegrable function	291
	b. Cantor set	291
	c. Cantor ternary set	292
	d. Cantor–Vitali function	292
	e. Lebesgue nonmeasurable sets	293
5.1.4	Abstract measures	295
	a. Measurability according to Carathéodory	295
	b. Construction of measures: Method I	298
	c. Construction of measures: Method II	301
5.2	Measurable Functions and the Integral	303
5.2.1	Measurable functions	303
	a. Families of measurable functions	305
	b. Approximation by simple functions	307
	c. Null sets	308
	d. Lebesgue measurable functions	309
5.2.2	Lebesgue integral	310
	a. Definition of Lebesgue integral	311
	b. Beppo Levi's theorem	313
	c. Linearity of integral	314

	d. Cavalieri formula	315
	e. Chebycev's inequality	316
	f. Null sets and the integral	316
	g. Convergence theorems	317
	h. Riemann integrable functions	318
5.3	Product Spaces and Measures	321
	a. \mathbb{R}^n spaces and Lebesgue measures	321
	b. Fubini's theorem	323
	c. Product measures and repeated integration	327
5.4	Change of Variable in Lebesgue's Integral	331
	a. Invariance under orthogonal transformations	331
	b. Measurable maps and Lipschitz maps	332
	c. The area formula	333
	d. Change of variables in multiple integrals	335
5.5	Exercises	335
6.	Hausdorff and Radon Measures	339
6.1	Abstract Measures	339
6.1.1	Positive Borel Measures	339
	a. Lusin theorem	341
6.1.2	Radon measures in \mathbb{R}^n	342
	a. Support	343
	b. Lusin theorem for Radon measures	343
	c. Riesz's theorem	344
6.2	Differentiation of Measures	347
6.2.1	Differentiation of Lebesgue integral	347
	a. Maximal function	348
	b. Differentiation of Lebesgue's integral	349
	c. Some variants of Lebesgue differentiation	351
	d. Lebesgue's points	352
6.2.2	Radon–Nikodym theorem	353
6.2.3	Doubling measures in metric spaces	356
	a. Differentiation of the integral	356
	b. Differentiation of measures	358
	c. Monotone functions	360
	d. Stieltjes–Lebesgue's integral	360
	e. Absolutely continuous functions	364
	f. Rectifiable curves	366
	g. Lipschitz functions in \mathbb{R}^n	366
6.2.4	Differentiation of measures in \mathbb{R}^n	369
	a. The Besicovitch and Vitali covering theorems	369
	b. Radon–Nikodym's derivative	373
6.2.5	Disintegration of measures	375
6.3	Hausdorff Measures	377
6.3.1	Densities	381
	a. Densities and Hausdorff measures	381
6.4	Area and Coarea Formulas	383

6.4.1	The area formula	384
6.4.2	The coarea formula	387
6.5	Exercises	392
A.	Mathematicians and Other Scientists	395
B.	Bibliographical Notes	397
C.	Index	399

Mathematical Analysis

Foundations and Advanced Techniques for Functions of
Several Variables

Giaquinta, M.; Modica, G.

2012, XIII, 405 p. 66 illus., Hardcover

ISBN: 978-0-8176-8309-2

A product of Birkhäuser Basel
