

Contents

1	Energy Systems	1
1.1	The Energy Cycle	1
1.1.1	Introduction	1
1.1.2	Energy and Power: Natural Forms of Energy	3
1.1.3	Units of Measurement in Energy Systems	6
1.1.4	Energy Availability in Nature	8
1.1.5	Classification of Energy Sources	11
1.2	Closed Cycles of Energy Resources	13
1.2.1	The “Measurable” Definition of Sustainability	14
1.2.2	The Earth, as an “Open” Energy System, Allows the Realisation of Closed Cycles	19
1.3	Energy Systems	19
	References	23
2	Energy Resources	25
2.1	Definition of Energy Potential	25
2.2	The Earth’s Energy Balance	26
2.3	Renewable Sources	30
2.3.1	Solar Energy (Direct)	30
2.3.2	Hydropower	37
2.3.3	Wind	41
2.3.4	Biomass	50
2.3.5	Geothermal	55
2.3.6	Other	60
2.3.7	Current Renewable Energy Use	62
2.4	Non-renewable Energy Sources	63
2.4.1	Coal	65
2.4.2	Oil	72

2.4.3	Tar Sands	86
2.4.4	Natural Gas	87
2.4.5	Nuclear Power	92
	References	96
3	Energy Vectors	97
3.1	The Need for Energy Transportation and Storage	97
3.2	Attitude to Energy Transportation in Space and Time and Range of Application	99
3.3	Duration and Range of Transfers	100
3.4	Characteristics of Energy Vectors	102
3.4.1	Ways and Means of Storage, Transportation and Distribution of Vectors	102
3.5	Analysis of the Main Energy Vectors	105
3.5.1	Oil as Energy Vector	105
3.5.2	Coal as Energy Vector	114
3.5.3	Natural Gas as Energy Vector	115
3.5.4	Electricity as Energy Vector	120
3.5.5	Hydrogen as Energy Vector	143
3.5.6	Synthetic Fuels as Energy Vectors	164
3.5.7	Heat-Transfer Fluids as Energy Vectors	168
3.5.8	Mechanic Energy as Energy Vector	170
3.5.9	Radiant Energy as Energy Vector	173
3.6	The Era of Energy Vectors	174
3.6.1	Possible Production from Different Primary Sources	175
3.6.2	Environmental Compatibility During Use	176
3.6.3	Conversion Efficiency	176
	References	177
4	Energy Conversion and Transformation Plants	179
4.1	Overview	179
4.2	Energy Conversion Plants	179
4.2.1	Mechanical Energy-to-Electric Power Conversion Plants	181
4.2.2	Radiant Energy-to-Electric Power Conversion Plants	197
4.2.3	Chemical Energy-to-Electric Power Conversion Plants	203
4.2.4	Chemical Energy-to-Mechanical Energy Conversion Plants	235
4.2.5	Radiant Energy-to-Thermal Energy Conversion Plants	240
4.2.6	Thermal Energy-to-Chemical Energy Conversion Plants	251

4.2.7	Electric Power-to-Chemical Energy Conversion Plants	253
4.2.8	Radiant Energy-to-Chemical Energy Conversion Plants	259
4.2.9	Electric Energy-to-Thermal Energy Conversion Plants	259
4.2.10	Electric Power-to-Radiant (Luminous) Energy Conversion Plants	266
4.3	Energy Transformation Plants	277
4.3.1	Chemical Energy Transformation Plants	277
4.3.2	Thermal Energy Transformation Plants	283
	References	289
5	Distributed Generation and Cogeneration	291
5.1	Distributed Generation	291
5.1.1	General Features of Conversion Plants	291
5.1.2	Scale Economies	293
5.1.3	Energy Sources and Distributed Generation Technologies	293
5.1.4	From Concentrated Production to Distributed Production	294
5.1.5	Type One and Two Distributed Generation	297
5.2	Combined Production of Electric Power and Heat: Cogeneration	300
5.2.1	Cogeneration Technologies	302
5.2.2	Typical Indexes of Cogeneration Plants	311
5.2.3	District Heating	313
	References	320
6	Energy Useful Effect and End Use	321
6.1	Introduction	321
6.2	Thermal End Use	323
6.2.1	Overview	323
6.2.2	Thermal End Use with Heat Pump	333
6.3	Luminous End Use	336
6.3.1	Interior Lighting	336
6.3.2	Elements of Photometry	337
6.3.3	Natural Light	339
6.3.4	Artificial Light	340
6.4	Mechanic End Use	346
6.5	Electric/Electronic End Use	350
	References	352
	Index	353

Energy Systems in the Era of Energy Vectors
A Key to Define, Analyze and Design Energy Systems
Beyond Fossil Fuels

Orecchini, F.; Naso, V.

2012, VIII, 364 p., Hardcover

ISBN: 978-0-85729-243-8
