

Contents

1	A Review of Optimization Methods	1
1.1	Continuous Optimization Methods	2
1.1.1	Unconstrained Optimization	2
1.1.2	Constrained Optimization	41
1.1.3	Dynamic Programming	88
1.2	Mixed Integer and Combinatorial Optimization Methods	93
1.2.1	Mixed Integer Programming Modeling	97
1.2.2	Methods for Mixed Integer Programming	103
1.3	Bibliography	131
1.4	Exercises	133
	References	136
2	Forecasting	139
2.1	Smoothing Methods for Time-Series Analysis	142
2.1.1	Na Forecast Method	142
2.1.2	Cumulative Mean Method	143
2.1.3	Moving Average Method	144
2.1.4	Moving Average with Trends Method	146
2.1.5	Double Moving Average Method	146
2.1.6	Single Exponential Smoothing Method	148
2.1.7	Multiple Exponential Smoothing Methods	153
2.1.8	Double Exponential Smoothing with Linear Trends Method	156
2.1.9	The Holt Method	157
2.1.10	The Holt–Winters Method	159
2.2	Time-Series Decomposition	162
2.2.1	Additive Model for Time-Series Decomposition	163
2.2.2	Multiplicative Model for Time-Series Decomposition	165
2.2.3	Case Study	166

2.3	Regression	170
2.3.1	Generalized Regression	173
2.3.2	Non-Linear Least Squares Regression	173
2.3.3	Exponential Model Regression	174
2.4	Auto-Regression-Based Forecasting	176
2.5	Artificial Intelligence-Based Forecasting	184
2.5.1	Case Study	189
2.6	Forecasting Ensembles	192
2.7	Prediction Markets	197
2.8	Bibliography	198
2.9	Exercises	199
	References	201
3	Planning and Scheduling	203
3.1	Aggregate Production Planning	203
3.1.1	Formulation of the Multi-Commodity Aggregate Planning Problem	212
3.1.2	Solving Multi-Commodity Aggregate Planning Problem	215
3.1.3	Multi-Commodity Aggregate Planning Problem as Multi-Criterion Optimization Problem	216
3.2	Production Scheduling	220
3.3	Job-Shop Scheduling	222
3.3.1	Scheduling for a Single Machine	225
3.3.2	Scheduling for Parallel Machines	228
3.3.3	Shifting Bottleneck Heuristic for the General Job-Shop Scheduling Problem	229
3.4	Personnel Scheduling	232
3.4.1	Scheduling Two Consecutive Days-Off	232
3.4.2	Air-Line Crew Assignment	234
3.5	Due-Date Management, Available To Promise Logic and Decoupling Point Coordination	242
3.5.1	Introduction	243
3.5.2	The Push–Pull Interface	243
3.5.3	Business Requirements from Available-To-Promise	245
3.5.4	Problem Inputs	246
3.5.5	Problem Parameters	248
3.5.6	Problem Outputs	248
3.5.7	Modeling Available-To-Promise as an Optimization Problem	249
3.5.8	A Simplified Example	256
3.5.9	Implementation	259
3.5.10	Computational Results	261

3.6	Bibliography	262
3.7	Exercises	265
	References	265
4	Inventory Control	269
4.1	Deterministic Demand Models and Methods	269
4.1.1	The EOQ Model	269
4.1.2	The EPQ Model	280
4.2	Stochastic Demand Models and Methods	284
4.2.1	Single-Period Problems: The Newsboy Problem	284
4.2.2	Continuous Review Systems	286
4.2.3	Periodic Review Systems	294
4.3	Multi-Echelon Inventory Control	331
4.3.1	Serial 2-Echelon Inventory System Under Deterministic Demand	332
4.3.2	Serial 2-Echelon Inventory System Under Stochastic Demand	334
4.3.3	Stability of Serial Multi-Echelon Supply Chains	337
4.4	Bibliography	340
4.5	Exercises	341
	References	342
5	Location Theory and Distribution Management	345
5.1	Location Models and Algorithms	345
5.1.1	The p-Median Problem	348
5.1.2	The Uncapacitated Facility Location Problem	360
5.1.3	The Capacitated Facility Location Problem	361
5.1.4	The p-Center Problem	367
5.2	Distribution Management: Models and Algorithms	370
5.2.1	The Vehicle Routing Problem	371
5.2.2	The Tankering Problem	378
5.3	Integrated Location and Distribution Management	381
5.4	Bibliography	382
5.5	Exercises	383
	References	384
6	Epilogue	387
	About the Author	391

Quantitative Methods in Supply Chain Management
Models and Algorithms

Christou, I.T.

2012, XIV, 398 p., Hardcover

ISBN: 978-0-85729-765-5
