1	Concepts for Electromechanical Conversion	1
1.1	Definitions	1
1.1.1	Electromechanical Devices	1
1.1.2	Energy	2
1.2	Electromagnetism	3
1.2.1	Ampère's Law	3
1.2.2	Laplace's Law	4
1.2.3	Induction Flow	5
1.2.4	Magnetic Field	6
1.2.5	Magnetic Material	7
1.2.6	Faraday's Law	9
1.3	Causal Representation	12
1.3.1	Preamble	12
1.3.2	Causality of Faraday's Law	13
1.3.3	Electromagnetic Energy	15
1.4	The Electromechanical Conversion	19
1.4.1	Principle of Electromechanical Conversion	19
1.4.2	Basic Electromechanical Conversion	21
	References	34
2	Dynamic Modeling of Induction Machines	35
2.1	Presentation of the Three-Phase Induction Machine	35
2.1.1	Constitution and Structure	35
2.1.2	Working Principle	36
2.1.3	Equivalent Representation and Vector Formulation	38
2.2	Dynamic Modeling in a Three-Axe Frame	39
2.2.1	Hypotheses	39
2.2.2	Study of the Electromechanical Conversion	39
2.3	Dynamic Model in a Two-Axe Frame	46
2.3.1	Phasor in a Three-Axe Frame	46

2.3.2	Phasor in a Fixed Two-Axe Frame	47
2.3.3	Transformation Matrices	48
2.3.4	Vector Model in a Two-Axe Frame	50
2.4	Vector Model in a Two-Axe Rotating Frame	55
2.4.1	The Park Transformation	55
2.4.2	Induction Machine Model in the Park Reference Frame.	57
2.4.3	General Model in the Park Reference Frame	61
2.4.4	Model Using the Rotor Flux.	62
2.4.5	Model Using the Stator Flux	67
2.4.6	Model for System Analysis	70
2.5	The Effect of the Magnetic Saturation	72
2.6	Conclusion	74
	References	74
3	Vector Control of Induction Machines	75
3.1	Formalism for the Design of Control Systems.	76
3.1.1	Inverted Model Concepts	76
3.1.2	Direct Inversion of an Instantaneous Relation.	77
3.1.3	Indirect Inversion of a Causal Relation	77
3.1.4	Indirect Inversion of a Relation with Various Inputs	78
3.1.5	Design of a Control Law	79
3.1.6	Application to the Control of a Direct-Current Machine.	84
3.1.7	Generalization Using State Representation	88
3.2	Flux-Orientation Control Strategies	90
3.3	Vector Control with Oriented Rotor Flux	92
3.3.1	A Priori Modeling on the Flux Orientation.	92
3.3.2	Vector Control of the Rotor Flux and of the Torque	97
3.4	Rotor-Flux Observer-Based Control	104
3.4.1	Control Without a Priori on the Flux Orientation	104
3.4.2	State Representation Adapted to the Observation of the Rotor Flux	106
3.4.3	Rotor Flux Observers	109
3.4.4	Vector Orientation in a Static Reference Frame	116
3.4.5	Direct Vector Control of the Flux Without a Priori Orientation	117
3.5	Discretization of Estimators and Observers.	117
3.6	Conclusion	119
	References	120
4	Theoretical Study of the Parametric Sensitivity.	123
4.1	Position of the Problem	123
4.2	Theoretical Study of Parametric Sensitivity	125

4.2.1	Errors on the Magnetic Flux Control	125
4.2.2	Application to Control with a Priori on the Rotor Flux	130
4.2.3	Application to Controls Without a Priori	145
4.3	Summary	150
4.3.1	Control with a Priori on the Rotor Flux	150
4.3.2	Control Without a Priori	152
4.4	Parameters of the Tested Machine	152
	References	152
5	Fuzzy Supervisor	155
5.1	Fuzzy Logic Principles	155
5.2	Combination of Two Flux Orientation Strategies	157
5.2.1	Combination of Explicit and Implicit Techniques for Frame Orientation	157
5.2.2	Variations in the Consumption of Stator Current	158
5.2.3	Introduction of a Fuzzy Logic Supervisor	159
5.3	Combination of Two Strategies for Flux Estimation	167
5.3.1	Combination of the Magnetizing Current Estimations	167
5.3.2	Theoretical Constraint	171
5.3.3	Variations of the Consumption of Stator Current	171
5.3.4	Introduction of a Fuzzy Logic Supervisor	172
5.4	Optimization of the Reduced-Order Rotor-Flux Observer	179
5.4.1	Introduction	179
5.4.2	Sensitivity of the Reduced-Order Flux Estimator	181
5.4.3	Determination of the Observer Gains with a Fuzzy Logic Supervisor	181
	References	193
6	Applications	195
6.1	Kinetic Energy Storage System Combined with a Power System that Associates a Wind Turbine and a Diesel Generator	195
6.1.1	Introduction	195
6.1.2	Control of the Kinetic Energy Storage System	197
6.1.3	Results	201
6.1.4	Parameters of the Induction Machine Coupled with the Flywheel	205
6.2	Electrical Traction	206
6.2.1	Specificities of the Application	206
6.2.2	Study of Sensitivity on Torque Control	206
6.2.3	Results in Dynamic State	212
6.2.4	Parameters of the Tested Machine	213
	References	215

Summary and Conclusion	217
Index	221

Vector Control of Induction Machines

Desensitisation and Optimisation Through Fuzzy Logic

Robyns, B.; Francois, B.; Degobert, P.; Hautier, J.P.

2012, XXVI, 222 p., Hardcover

ISBN: 978-0-85729-900-0
