

Contents

1	The Modeling of Single-dof Mechanical Systems	1
1.1	Introduction	1
1.2	Basic Definitions	3
1.3	The Modeling Process	7
1.4	The Newton-Euler Equations	8
1.5	Constitutive Equations of Mechanical Elements	11
1.5.1	Springs	11
1.5.2	Dashpots	17
1.5.3	Series and Parallel Arrays of Linear Springs	18
1.5.4	Series and Parallel Arrays of Linear Dashpots	20
1.6	Planar Motion Analysis	21
1.6.1	Lagrange Equations	25
1.6.2	Energy Functions	26
1.6.3	Kinetic Energy	26
1.6.4	Potential Energy	28
1.6.5	Power Supplied to a System and Dissipation Function	29
1.6.6	The Seven Steps of the Modeling Process	34
1.7	Hysteretic Damping	53
1.8	Coulomb Damping	54
1.9	Equilibrium States of Mechanical Systems	59
1.10	Linearization About Equilibrium States. Stability	66
1.11	Exercises	76
	References	84
2	Time Response of First- and Second-order Dynamical Systems	85
2.1	Preamble	85
2.2	The Zero-input Response of First-order LTIS	88
2.3	The Zero-input Response of Second-order LTIS	91
2.3.1	Undamped Systems	91
2.3.2	Damped Systems	97

2.4	The Zero-State Response of LTIS	111
2.4.1	The Unit Impulse	112
2.4.2	The Unit Doublet	112
2.4.3	The Unit Step	113
2.4.4	The Unit Ramp	114
2.4.5	The Impulse Response	115
2.4.6	The Convolution (Duhamel) Integral	126
2.5	Response to Abrupt and Impulsive Inputs	130
2.5.1	First-order Systems	131
2.5.2	Second-order Undamped Systems	132
2.5.3	Second-order Damped Systems	136
2.5.4	Superposition	140
2.6	The Total Time Response	141
2.6.1	First-order Systems	141
2.6.2	Second-order Systems	142
2.7	The Harmonic Response	145
2.7.1	The Unilateral Harmonic Functions	147
2.7.2	First-order Systems	149
2.7.3	Second-order Systems	152
2.7.4	The Response to Constant and Linear Inputs	159
2.7.5	The Power Dissipated By a Damped Second-order System	161
2.7.6	The Bode Plots of First- and Second-order Systems	161
2.7.7	Applications of the Harmonic Response	164
2.7.8	Further Applications of Superposition	174
2.7.9	Derivation of $z_b(t)$	179
2.8	The Periodic Response	181
2.8.1	Background on Fourier Analysis	182
2.8.2	The Computation of the Fourier Coefficients	189
2.8.3	The Periodic Response of First- and Second-order LTIS	202
2.9	The Time Response of Systems with Coulomb Friction	207
2.10	Exercises	210
	References	231
3	Simulation of Single-dof Systems	233
3.1	Preamble	233
3.2	The Zero-Order Hold (ZOH)	234
3.3	First-Order Systems	235
3.4	Second-Order Systems	239
3.4.1	Undamped Systems	239
3.4.2	Damped Systems	245
3.5	Exercises	257
	Reference	262

4	Modeling of Multi-dof Mechanical Systems	263
4.1	Introduction	263
4.2	The Derivation of the Governing Equations	264
4.3	Equilibrium States	278
4.4	Linearization of the Governing Equations About Equilibrium States	283
4.5	Lagrange Equations of Linear Mechanical Systems	288
4.6	Systems with Rigid Modes	298
4.7	Exercises	302
	References	305
5	Vibration Analysis of Two-dof Systems	307
5.1	Introduction	307
5.2	The Natural Frequencies and the Natural Modes of Two-dof Undamped Systems	308
5.2.1	Algebraic Properties of the Normal Modes	322
5.3	The Zero-Input Response of Two-dof Systems	323
5.3.1	Semidefinite Systems	324
5.3.2	Systems with a Positive-Definite Frequency Matrix	333
5.3.3	The Beat Phenomenon	344
5.4	The Classical Modal Method	347
5.5	The Zero-State Response of Two-dof Systems	353
5.5.1	Semidefinite Systems	354
5.5.2	Definite Systems	358
5.6	The Total Response of Two-dof Systems	363
5.6.1	The Classical Modal Method Applied to the Total Response	364
5.7	Damped Two-dof Systems	366
5.7.1	Total Response of Damped Two-dof Systems	375
5.8	Exercises	381
	Reference	388
6	Vibration Analysis of n-dof Systems	389
6.1	Introduction	389
6.2	The Natural Frequencies and the Natural Modes of n-dof Undamped Systems	390
6.2.1	Algebraic Properties of the Normal Modes	405
6.3	The Zero-input Response of Undamped n-dof Systems	406
6.3.1	The Calculation of the Zero-input Response of n-dof Systems Using the Classical Modal Method	409
6.4	The Zero-state Response of n-dof Systems	412
6.4.1	The Calculation of the Zero-state Response of n-dof Systems Using the Classical Modal Method	414
6.5	The Total Response of n-dof Undamped Systems	415
6.6	Analysis of n-dof Damped Systems	415
6.7	Exercises	417

7	Simulation of n-dof Systems	419
7.1	Introduction	419
7.2	Undamped Systems	420
7.3	The Discrete-Time Response of Undamped Systems	421
7.3.1	The Numerical Stability of the Simulation Algorithm of Undamped Systems	426
7.3.2	On the Choice of the Time Step	428
7.4	The Discrete-Time Response of Damped Systems	431
7.4.1	A Straightforward Approach	432
7.4.2	An Approach Based on the Laplace Transform	435
7.5	Exercises.....	452
	References	454
8	Vibration Analysis of Continuous Systems	455
8.1	Introduction	455
8.2	Mathematical Modeling	456
8.2.1	Bars Under Axial Vibration.....	456
8.2.2	Bars Under Torsional Vibration	458
8.2.3	Strings Under Transverse Vibration	460
8.2.4	Beams Under Flexural Vibration	462
8.3	Natural Frequencies and Natural Modes	465
8.3.1	Systems Governed by Second-Order PDE	465
8.3.2	Systems Governed by Fourth-Order PDEs: Beams Under Flexural Vibration	480
8.4	The Properties of the Eigenfunctions	484
8.4.1	Systems Governed by Second-Order PDEs	484
8.5	Exercises.....	494
	References	496
A	Matrix Functions	497
A.1	Introduction	497
A.2	Preliminary Concepts	497
A.3	Calculation of Analytic Matrix Functions of a Matrix Argument ..	499
A.3.1	Special Case: 2×2 Matrices	502
A.3.2	Examples	505
A.4	Use of Mohr's Circle to Compute Analytic Matrix Functions	516
A.4.1	Examples	521
A.5	Shortcuts for Special Matrices.....	527
A.5.1	Example A.5.1.....	528
A.5.2	Example A.5.2.....	529
A.5.3	Example A.5.3.....	529
A.5.4	Example A.5.4.....	530
	References	530

B The Laplace Transform	531
B.1 Introduction	531
B.1.1 Properties of the Laplace Transform	533
B.2 Time Response via the Laplace Transform	535
B.2.1 The Inverse Laplace Transform via Partial-Fraction Expansion	538
B.2.2 The Final- and the Initial-Value Theorems.....	548
Reference.....	550
Index	551

Dynamic Response of Linear Mechanical Systems

Modeling, Analysis and Simulation

Angeles, J.

2012, XX, 560 p., Hardcover

ISBN: 978-1-4419-1026-4
