## Part I    Supply Chain Operations Models with Demand Shaping

<b>1</b>	<b>Scope of Problem Coverage and Introduction</b>	3
1.1	Scope and Preliminaries	3
1.2	Overview of Foundational Models	4
1.2.1	The Economic Order Quantity (EOQ) Model	4
1.2.2	The Newsvendor Problem	6
1.2.3	The Economic Lot Sizing Problem (ELSP)	7
1.2.4	The Knapsack Problem (KP)	9
1.2.5	The Generalized Assignment Problem (GAP)	11
1.2.6	The Facility Location Problem (FLP)	12
	References	13
<b>2</b>	<b>Production and Inventory Planning Models with Demand Shaping</b>	15
2.1	EOQ Models with Pricing	15
2.2	The Newsvendor Problem with Pricing and Demand Shaping	16
2.3	Lot Sizing with Pricing	18
2.4	Knapsack Problems with Nonlinear Objectives	20
2.5	Location and Assignment Problems with Flexible Demand	22
	References	23

## Part II    Production Planning with Demand Flexibility

<b>3</b>	<b>EOQ-Type Models with Demand Selection</b>	27
3.1	Unconstrained EOQ Problems with Market Choice	27
3.1.1	Standard EOQ with Market Choice	27
3.1.2	The EPQ Problem with Market Choice	29
3.2	EOQMC Problems with Constraints	30
3.2.1	Demand Rate Constraints	30
3.2.2	Batch Size Constraints	31
	References	32

<b>4</b>	<b>Single-Period Stochastic Inventory Planning with Demand Selection</b>	<b>33</b>
4.1	The Selective Newsvendor Problem . . . . .	33
4.2	The Basic SNP . . . . .	33
4.3	The SNP with Market Effort . . . . .	34
4.3.1	Market Variance Independent of Market Effort . . . . .	35
4.3.2	Market Variance Dependent on Market Effort . . . . .	35
4.4	The SNP with Limited Market Resources . . . . .	36
4.5	The SNP with Pricing . . . . .	37
4.5.1	Equal Market Prices . . . . .	37
4.5.2	SNP with Market Price Discrimination . . . . .	39
	References . . . . .	39
<b>5</b>	<b>Dynamic Lot Sizing with Demand Selection and the Pricing Analog</b>	<b>41</b>
5.1	Demand Selection Problem Definition . . . . .	41
5.2	Dual Ascent Solution Algorithm . . . . .	43
5.3	Shortest Path Solution Approach . . . . .	45
5.4	Interpretation of the DSP as a Pricing Problem . . . . .	46
5.5	Capacitated Versions . . . . .	47
	References . . . . .	50
<b>6</b>	<b>Dynamic Lot Sizing with Market Selection</b>	<b>51</b>
6.1	Market Selection Problem Definition . . . . .	51
6.1.1	MSP Problem Complexity . . . . .	53
6.1.2	MSP Approximability . . . . .	54
6.1.3	Polynomially Solvable Special Cases . . . . .	57
6.1.4	Heuristic Solution Methods . . . . .	59
	References . . . . .	60
<b>Part III Supply Chain Network Planning with Demand Flexibility</b>		
<b>7</b>	<b>Assignment and Location Problems in Supply Chains</b>	<b>63</b>
7.1	Demand Selection Problems . . . . .	63
7.1.1	The GAP with Demand Selection . . . . .	63
7.1.2	The FLP with Demand Selection . . . . .	64
7.2	Problems with Demand Specification Flexibility . . . . .	65
7.2.1	The GAP with Demand Specification Flexibility . . . . .	66
7.2.2	The FLP with Demand Specification Flexibility . . . . .	69
	References . . . . .	70
<b>8</b>	<b>Branch-and-Price Decomposition for Assignment and Location Problems</b>	<b>71</b>
8.1	Branch-and-Price Approach . . . . .	71
8.2	Branch-and-Price for Supply Chain Planning Problems . . . . .	74
8.2.1	The Continuous-Time Single-Sourcing Problem . . . . .	74
8.2.2	Single-Period Demand Allocation with Uncertainty . . . . .	75
8.2.3	Integrated Facility Location and Production Planning . . . . .	77
8.2.4	The GAP and FLP with Flexible Demands . . . . .	79
	References . . . . .	81

**Part IV   Research Directions and Modeling Challenges**

**9   Research Challenges in Supply Chain Planning with Flexible Demand   85**

9.1   Dimensions of Demand Flexibility Modeling . . . . . 85

9.2   Model Limitations . . . . . 86

9.3   Limitations of Branch-and-Price Decomposition . . . . . 87

9.4   Further Generalizations and Approximation Algorithms . . . . . 88

References . . . . . 90
