

Contents

1	Introduction to Organic Semiconductors, Transistors and Conductors	1
1.1	Background: Plastic Electronics	1
1.2	Organic Semiconductors and Conductors	3
1.3	The Organic Thin Film Transistor	5
1.3.1	OTFT Operation and Carrier Type	6
1.3.2	Charge Carrier Mobility	8
1.4	The Dielectric/Semiconductor Interface in Organic Thin Film Transistors	10
1.4.1	Organic Semiconductor Nucleation and Growth on Dielectric Surfaces	11
1.4.2	Rate of Nucleation	13
1.4.3	Organic Semiconductor Growth Mode	14
1.4.4	Effects of Deposition Parameters	15
1.4.5	The Effects of the Dielectric Material and Dielectric Surface Modification Layer	17
1.4.6	Controlled Growth by Surface Roughness, Surface Patterning and Surface Chemistry	17
1.4.7	Summary: The Dielectric/Semiconductor Interface	18
1.5	High Conductivity Carbon: Graphene and Carbon Nanotubes	19
1.6	The Transparent Electrode	21
1.7	Conclusion and Goals of the Thesis Research	23
	References	23
2	Organic Semiconductor Growth and Transistor Performance as a Function of the Density of the Octadecylsilane Dielectric Modification Layer	27
2.1	Introduction	27
2.2	Fabrication and Characterization of Octadecylsilane Monolayers	28

2.3	Effects of OTS Density on Pentacene and C60 Transistor Performance.	31
2.4	Organic Semiconductor Thin Film Analysis: Grazing Incidence X-ray Diffraction and Atomic Force Microscopy	33
2.5	Organic Semiconductor Crystallization and 2D Versus 3D Growth Mode on OTS of Varying Order	36
2.6	Conclusions	41
2.7	Experimental.	42
2.7.1	Materials	42
2.7.2	Fabrication of OTS films	42
2.7.3	Characterization	43
2.7.4	High Resolution AFM	43
2.7.5	Grazing Incidence X-ray Diffraction	43
2.7.6	Electrical Characterization	44
	Appendix 2.A: Growth of a Kossel Crystal.	44
	References	47
3	The Nucleation, Surface Energetics and Stability of Pentacene Thin Films on Crystalline and Amorphous Octadecylsilane Surface	51
3.1	Introduction	51
3.2	Properties of the OTS Monolayers.	53
3.3	Pentacene Nucleation Density on Different OTS Monolayers . .	53
3.4	Capture Zone Model Analysis.	56
3.5	Estimating the Barrier to Nucleation	58
3.6	Pentacene Thin Film Stability on Crystalline and Amorphous OTS	61
3.7	Conclusions	65
	References	66
4	Technological Importance of Crystalline Octadecylsilane Monolayers: Crystalline Monolayers Fabricated by Spin-Casting	69
4.1	Introduction	69
4.2	Crystalline OTS Monolayer Deposition and Characterization . .	71
4.3	TFT Performance on the Spin-Cast Crystalline OTS Monolayers	76
4.4	Conclusions	85
4.5	Experimental.	86
4.5.1	Materials	86
4.5.2	Characterization	86
4.5.3	TFT Device Fabrication.	87

4.6	General Method for Fabrication of Crystalline OTS SAM from Spin-Casting	87
	Appendix: Kinetics of Self Assembled Monolayer Formation	88
	References	89
5	Alkylsilane Dielectric Modification Layer: Molecular Length Dependence and the Odd–Even Effect	91
5.1	Introduction	91
5.2	Initial Experiments Using Odd and Even Length Alkylsilanes as Dielectric Modification Layers in Pentacene TFTs	92
5.3	Similarities and Differences Between Alkylsilane/SiO ₂ and Alkanethiol/Gold Systems	97
5.4	The Role of Alkylsilane Density and Reactivity of Silane Group on the “Odd–Even” Effect	98
5.5	Role of Alkylsilane Chain Length on Pentacene TFT Performance	99
5.6	Conclusions	101
5.7	Experimental.	102
	5.7.1 Materials	102
	5.7.2 Deposition of Alkylsilane Monolayers	102
	5.7.3 Characterization of SAMs and Pentacene Thin Films	103
	Appendix 5.A.1: Grazing Incidence X-ray Diffractograms of C16 and C17 Alkylsilanes	104
	Appendix 5.A.2: Estimating the Crystallinity of Thin Films Using Grazing Incidence X-ray Diffraction	104
	References	106
6	Low-Voltage Monolayer Pentacene Transistors Fabricated on Ultrathin Crystalline Self-Assembled Monolayer Based Dielectric	107
6.1	Introduction	107
6.2	Pentacene Monolayer Transistors on Crystalline OTS Modified SiO ₂	108
6.3	Ultrathin Dielectric Based on a Crystalline OTS Monolayer	110
6.4	Low Power Monolayer Thick Pentacene Transistors	112
6.5	Conclusions	113
	References	113
7	Highly Conductivity and Transparent Carbon-Nanotube and Organic Semiconductor Hybrid Films: Exploiting Organic Semiconductor Energy Levels and Growth Mode.	115
7.1	Introduction	115
7.2	Transparent Electrodes	115
7.3	Carbon Nanotube Based Transparent Electrodes	116

7.4	Fabrication of Hybrid CNT Based Transparent Electrode	117
7.5	Conclusions	125
7.6	Experimental.	125
7.6.1	Materials and Methods	125
	References	127
8	Outlook/Conclusions	129
8.1	Outlook	129
8.2	Conclusions	129

Investigating the Nucleation, Growth, and Energy Levels
of Organic Semiconductors for High Performance
Plastic Electronics
