Part I Theory

1	Introduction	3
1.1	Motivation	3
1.1.1	Anti-lock Braking Systems	3
1.1.2	PID Tuning	4
1.2	Basic Principles	5
1.3	Literature Overview	7
1.3.1	Theory Development of Extremum Seeking Control	8
1.3.2	Applications of Extremum Seeking Control	13
	References	20
2	Numerical Optimization	31
2.1	Mathematical Background	31
2.2	Unconstrained Optimization	35
2.2.1	Optimality Conditions	35
2.2.2	Line Search Methods	36
2.2.3	Trust-Region Methods	40
2.2.4	Direct Search Methods	43
	References	45
3	Design of Extremum Seeking Control	47
3.1	Analog Optimization Based Extremum Seeking Control	47
3.1.1	Gradient Based Extremum Seeking Control	49
3.1.2	Sliding Mode Based Extremum Seeking Control	51
3.1.3	Perturbation Based Extremum Seeking Control	52
3.1.4	Perturbation Based Extremum Seeking Control for a Plant with Slightly Unstable Poles	54
3.1.5	Perturbation Based Extremum Seeking Control for a Plant with Moderately Unstable Poles	58
3.2	Numerical Optimization Based Extremum Seeking Control	63

3.2.1	Basic Numerical Optimization based Extremum Seeking Control Algorithm	64
	References	65
4	Finite Time State Regulator Design	67
4.1	Finite Time State Regulator Design	67
4.1.1	Linear Time Invariant Systems	67
4.1.2	State Feedback Linearizable Systems	72
4.1.3	Input–Output Feedback Linearizable Systems	75
4.2	Robustness Issues	76
4.2.1	Robustness of Line Search Methods	78
4.2.2	Robustness of Trust Region Methods	81
4.2.3	Robust Extremum Seeking Control Design	85
4.3	Conclusion	85
	References	86
5	Asymptotic State Regulator Design	89
5.1	Problem Statement	89
5.2	Asymptotic State Regulator Design for NOESC	91
5.2.1	Construction of Reference Signal	93
5.2.2	Using the Asymptotic State Regulator in Finite Time	95
5.2.3	Algorithm and Convergence	98
5.3	Robust Design for Input Disturbance	103
5.3.1	Bounded Input Disturbance	104
5.3.2	Unbounded Input Disturbance	105
5.4	Robust Design for Unknown Plant Dynamics	106
5.4.1	Indirect Adaptive Control	108
5.4.2	Direct Adaptive Control	111
5.5	Conclusions	114
	References	117
Part II Applications		
6	Antilock Braking Systems	121
6.1	Problem Description	121
6.2	Perturbation Based Extremum Seeking Control Design	122
6.3	Sliding Mode Based Extremum Seeking Control Design	124
6.4	Numerical Optimization Based Extremum Seeking Control Design	125
6.5	Conclusions	130
	References	131
7	Impedance Matching in Semiconductor Plasma Processing Chamber	133
7.1	Introduction to Impedance Matching	133
7.1.1	Maximal Power Principle	133
7.1.2	Reflected Power	134
7.1.3	Impedance Matching Techniques and Challenges in the Semiconductor Plasma Processing Chamber	136

7.1.4	Plasma Load Impedance Estimation for a CCP Chamber . .	139
7.2	Impedance Matching via Extremum Seeking Control	143
7.3	Dual Frequency Matching Network Tuning via Direct Search Based NOESC	144
7.4	Dual Capacitor Matching Network Tuning via Perturbation Based Extremum Seeking Control	148
7.5	Conclusions	150
	References	153
8	Swarm Tracking	155
8.1	Introduction	155
8.2	Problem Statement	156
8.3	Gradient Based Extremum Seeking Control Design	158
8.3.1	Analysis	158
8.3.2	Kinematic Point-Mass Model Simulations	163
8.3.3	Dynamic Point-Mass Model Simulations	164
8.4	Perturbation Based Extremum Seeking Control Design	164
8.4.1	Analysis	164
8.4.2	Kinematic Point-Mass Model Simulations	167
8.4.3	Obstacle Avoidance	167
8.4.4	Dynamic Point-Mass Model Simulations	170
8.5	Numerical Optimization Based Extremum Seeking Control Design	170
8.5.1	Kinematic Point-Mass Model Simulations: Target Tracking and Formation Orientation	174
8.5.2	Dynamic Point-Mass Model Simulations	178
8.6	Application: Detection of Leakage Points Using a Mobile Radar Sensor Network	179
8.6.1	Problem Statement	182
8.6.2	RF Signal Synthesis for Multi-SUAV Geometry	183
8.6.3	NOESC for Leakage Point Localization	185
8.6.4	Results	187
8.7	Concluding Remarks	194
	References	195
Index		199

Extremum-Seeking Control and Applications

A Numerical Optimization-Based Approach

Zhang, C.; Ordóñez, R.

2012, XVIII, 201 p., Hardcover

ISBN: 978-1-4471-2223-4
