**Part I    Overview of Fractional Processes and Fractional-Order Signal Processing Techniques**

<b>1    Introduction</b>	<b>3</b>
1.1    An Introduction to Fractional Processes and Analysis Methods	3
1.2    Basis of Stochastic Processes	6
1.2.1    Statistics of Stochastic Processes	6
1.2.2    Properties of Stochastic Processes	7
1.2.3    Gaussian Distribution and Gaussian Processes	9
1.2.4    Stationary Processes	10
1.3    Analysis of Random Signals	10
1.3.1    Estimation of Properties for Stochastic Signals	10
1.3.2    Simulation of Random Signals	12
1.3.3    Signal Filtering	13
1.3.4    Modeling Random Processes	15
1.3.5    Transform Domain Analysis	16
1.3.6    Other Analysis Methods	19
1.4    Research Motivation	19
1.4.1    Heavy Tailed Distributions	19
1.4.2    Long Range Dependence	20
1.4.3    Local Memory	22
1.5    Basics of Fractional-Order Signal Processing	23
1.5.1    Fractional Calculus	23
1.5.2 $\alpha$ -Stable Distribution	25
1.5.3    Fractional Fourier Transform	26
1.6    Brief Summary of Contributions of the Monograph	28
1.7    Structure of the Monograph	28
<b>2    An Overview of Fractional Processes and Fractional-Order Signal Processing Techniques</b>	<b>31</b>
2.1    Fractional Processes	31

2.1.1	Fractional Processes and Fractional-Order Systems . . . . .	32
2.1.2	Stable Processes . . . . .	35
2.1.3	Fractional Brownian Motion . . . . .	36
2.1.4	Fractional Gaussian Noise . . . . .	37
2.1.5	Fractional Stable Motion . . . . .	37
2.1.6	Fractional Stable Noise . . . . .	38
2.1.7	Multifractional Brownian Motion . . . . .	38
2.1.8	Multifractional Gaussian Noise . . . . .	38
2.1.9	Multifractional Stable Motion . . . . .	39
2.1.10	Multifractional Stable Noise . . . . .	39
2.2	Fractional-Order Signal Processing Techniques . . . . .	39
2.2.1	Simulation of Fractional Random Processes . . . . .	39
2.2.2	Fractional Filter . . . . .	40
2.2.3	Fractional-Order Systems Modeling . . . . .	41
2.2.4	Realization of Fractional Systems . . . . .	41
2.2.5	Other Fractional Tools . . . . .	43
2.3	Chapter Summary . . . . .	46

## Part II Fractional Processes

<b>3</b>	<b>Constant-Order Fractional Processes . . . . .</b>	<b>49</b>
3.1	Introduction of Constant-Order Fractional Processes . . . . .	49
3.1.1	Long-Range Dependent Processes . . . . .	49
3.1.2	Fractional Brownian Motion and Fractional Gaussian Noise	51
3.1.3	Linear Fractional Stable Motion and Fractional Stable Noise	53
3.2	Hurst Estimators: A Brief Summary . . . . .	56
3.2.1	R/S Method [194] . . . . .	56
3.2.2	Aggregated Variance Method [22] . . . . .	56
3.2.3	Absolute Value Method [297] . . . . .	57
3.2.4	Variance of Residuals Method [298] . . . . .	57
3.2.5	Periodogram Method and the Modified Periodogram Method [97, 113] . . . . .	57
3.2.6	Whittle Estimator [298] . . . . .	58
3.2.7	Diffusion Entropy Method [105] . . . . .	58
3.2.8	Kettani and Gubner's Method [138] . . . . .	59
3.2.9	Abry and Veitch's Method [1] . . . . .	59
3.2.10	Koutsoyiannis' Method [153] . . . . .	59
3.2.11	Higuchi's Method [116] . . . . .	60
3.3	Robustness of Hurst Estimators . . . . .	60
3.3.1	Test Signal Generation and Estimation Procedures . . . . .	61
3.3.2	Comparative Results and Robustness Assessment . . . . .	62
3.3.3	Quantitative Robustness Comparison and Guideline for Selection Estimator . . . . .	74
3.4	Chapter Summary . . . . .	76

<b>4</b>	<b>Multifractional Processes</b>	77
4.1	Multifractional Processes	78
4.1.1	Multifractional Brownian Motion and Multifractional Gaussian Noise	78
4.1.2	Linear Multifractional Stable Motion and Multifractional Stable Noise	79
4.2	Tracking Performance and Robustness of Local Hölder Exponent Estimator	79
4.2.1	Test Signal Generation and Estimation Procedures	80
4.2.2	Estimation Results	82
4.2.3	Guideline for Estimator Selection	91
4.3	Chapter Summary	92

**Part III Fractional-Order Signal Processing**

<b>5</b>	<b>Constant-Order Fractional Signal Processing</b>	95
5.1	Fractional-Order Differentiator/Integrator and Fractional Order Filters	95
5.1.1	Continuous-Time Implementations of Fractional-Order Operators	96
5.1.2	Discrete-Time Implementation of Fractional-Order Operators	101
5.1.3	Frequency Response Fitting of Fractional-Order Filters	120
5.1.4	Transfer Function Approximations to Complicated Fractional-Order Filters	123
5.1.5	Sub-optimal Approximation of Fractional-Order Transfer Functions	125
5.2	Synthesis of Constant-Order Fractional Processes	129
5.2.1	Synthesis of Fractional Gaussian Noise	129
5.2.2	Synthesis of Fractional Stable Noise	131
5.3	Constant-Order Fractional System Modeling	131
5.3.1	Fractional Autoregressive Integrated Moving Average Model	132
5.3.2	Gegenbauer Autoregressive Moving Average Model	133
5.3.3	Fractional Autoregressive Conditional Heteroscedasticity Model	134
5.3.4	Fractional Autoregressive Integrated Moving Average with Stable Innovations Model	134
5.4	A Fractional Second-Order Filter	136
5.4.1	Derivation of the Analytical Impulse Response of $(s^2 + as + b)^{-\gamma}$	136
5.4.2	Impulse Response Invariant Discretization of $(s^2 + as + b)^{-\gamma}$	140
5.5	Analogue Realization of Constant-Order Fractional Systems	145
5.5.1	Introduction of Fractional-Order Component	145

5.5.2	Analogue Realization of Fractional-Order Integrator and Differentiator . . . . .	146
5.6	Chapter Summary . . . . .	148
<b>6</b>	<b>Variable-Order Fractional Signal Processing . . . . .</b>	<b>149</b>
6.1	Synthesis of Multifractional Processes . . . . .	149
6.1.1	Synthesis of mGn . . . . .	149
6.1.2	Examples of the Synthesized mGns . . . . .	151
6.2	Variable-Order Fractional System Modeling . . . . .	152
6.2.1	Locally Stationary Long Memory FARIMA( $p, d_t, q$ ) Model . . . . .	152
6.2.2	Locally Stationary Long Memory FARIMA( $p, d_t, q$ ) with Stable Innovations Model . . . . .	154
6.2.3	Variable Parameter FIGARCH Model . . . . .	154
6.3	Analogue Realization of Variable-Order Fractional Systems . . . . .	154
6.3.1	Physical Experimental Study of Temperature-Dependent Variable-Order Fractional Integrator and Differentiator . . . . .	154
6.3.2	Application Examples of Analogue Variable-Order Fractional Systems . . . . .	158
6.4	Chapter Summary . . . . .	159
<b>7</b>	<b>Distributed-Order Fractional Signal Processing . . . . .</b>	<b>161</b>
7.1	Distributed-Order Integrator/Differentiator . . . . .	162
7.1.1	Impulse Response of the Distributed-Order Integrator/Differentiator . . . . .	163
7.1.2	Impulse Response Invariant Discretization of DOI/DOD . . . . .	165
7.2	Distributed-Order Low-Pass Filter . . . . .	167
7.2.1	Impulse Response of the Distributed-Order Low-Pass Filter . . . . .	168
7.2.2	Impulse Response Invariant Discretization of DO-LPF . . . . .	169
7.3	Distributed Parameter Low-Pass Filter . . . . .	171
7.3.1	Derivation of the Analytical Impulse Response of the Fractional-Order Distributed Parameter Low-Pass Filter . . . . .	172
7.3.2	Impulse Response Invariant Discretization of FO-DP-LPF . . . . .	174
7.4	Chapter Summary . . . . .	175
<b>Part IV Applications of Fractional-Order Signal Processing Techniques</b>		
<b>8</b>	<b>Fractional Autoregressive Integrated Moving Average with Stable Innovations Model of Great Salt Lake Elevation Time Series . . . . .</b>	<b>179</b>
8.1	Introduction . . . . .	179
8.2	Great Salt Lake Elevation Data Analysis . . . . .	180
8.3	FARIMA and FIGARCH Models of Great Salt Lake Elevation Time Series . . . . .	184
8.4	FARIMA with Stable Innovations Model of Great Salt Lake Elevation Time Series . . . . .	185
8.5	Chapter Summary . . . . .	187

<b>9</b>	<b>Analysis of Biocorrosion Electrochemical Noise Using Fractional Order Signal Processing Techniques</b>	189
9.1	Introduction	189
9.2	Experimental Approach and Data Acquisition	190
9.3	Conventional Analysis Techniques	190
9.3.1	Conventional Time Domain Analysis of ECN Signals	190
9.3.2	Conventional Frequency Domain Analysis	192
9.4	Fractional-Orders Signal Processing Techniques	196
9.4.1	Fractional Fourier Transform Technique	196
9.4.2	Fractional Power Spectrum Density	197
9.4.3	Self-similarity Analysis	199
9.4.4	Local Self-similarity Analysis	201
9.5	Chapter Summary	201
<b>10</b>	<b>Optimal Fractional-Order Damping Strategies</b>	203
10.1	Introduction	203
10.2	Distributed-Order Fractional Mass-Spring Viscoelastic Damper System	204
10.3	Frequency-Domain Method Based Optimal Fractional-Order Damping Systems	206
10.4	Time-Domain Method Based Optimal Fractional-Order Damping Systems	209
10.5	Chapter Summary	214
<b>11</b>	<b>Heavy-Tailed Distribution and Local Memory in Time Series of Molecular Motion on the Cell Membrane</b>	217
11.1	Introduction	217
11.2	Heavy-Tailed Distribution	218
11.3	Time Series of Molecular Motion	219
11.4	Infinite Second-Order and Heavy-Tailed Distribution in Jump Time Series	221
11.5	Long Memory and Local Memory in Jump Time Series	223
11.6	Chapter Summary	226
<b>12</b>	<b>Non-linear Transform Based Robust Adaptive Latency Change Estimation of Evoked Potentials</b>	233
12.1	Introduction	233
12.2	DLMS and DLMP Algorithms	234
12.2.1	Signal and Noise Model	234
12.2.2	DLMS and Its Degradation	234
12.2.3	DLMP and Its Improvement	235
12.3	NLST Algorithm	236
12.3.1	NLST Algorithm	236
12.3.2	Robustness Analysis of the NLST	236
12.4	Simulation Results and Discussion	239
12.5	Chapter Summary	242

<b>13</b>	<b>Multifractional Property Analysis of Human Sleep</b>	
	<b>Electroencephalogram Signals . . . . .</b>	<b>243</b>
13.1	Introduction . . . . .	243
13.2	Data Description and Methods . . . . .	244
	13.2.1 Data Description . . . . .	244
	13.2.2 Methods . . . . .	245
13.3	Fractional Property of Sleep EEG Signals . . . . .	245
13.4	Multifractional Property of Sleep EEG Signals . . . . .	248
13.5	Chapter Summary . . . . .	250
<b>14</b>	<b>Conclusions . . . . .</b>	<b>251</b>
	<b>Appendix A Mittag-Leffler Function . . . . .</b>	<b>253</b>
	<b>Appendix B Application of Numerical Inverse Laplace Transform</b>	
	<b>Algorithms in Fractional-Order Signal Processing . . . . .</b>	<b>257</b>
B.1	Introduction . . . . .	257
B.2	Numerical Inverse Laplace Transform Algorithms . . . . .	258
B.3	Some Application Examples of Numerical Inverse Laplace Transform Algorithms in Fractional Order Signal Processing . . .	259
	B.3.1 Example A . . . . .	259
	B.3.2 Example B . . . . .	260
	B.3.3 Example C . . . . .	261
	B.3.4 Example D . . . . .	263
	B.3.5 Example E . . . . .	263
B.4	Conclusion . . . . .	266
	<b>Appendix C Some Useful Webpages . . . . .</b>	<b>267</b>
	C.1 Useful Homepages . . . . .	267
	C.2 Useful Codes . . . . .	267
	<b>Appendix D MATLAB Codes of Impulse Response Invariant</b>	
	<b>Discretization of Fractional-Order Filters . . . . .</b>	<b>269</b>
D.1	Impulse Response Invariant Discretization of Distributed-Order Integrator . . . . .	269
D.2	Impulse Response Invariant Discretization of Fractional Second-Order Filter . . . . .	272
D.3	Impulse Response Invariant Discretization of Distributed-Order Low-Pass Filter . . . . .	275
	<b>References . . . . .</b>	<b>279</b>
