

Contents

- 1 Introduction 1**
 - 1.1 Background on Cyber-physical Systems and Distributed
Parameter Systems 1
 - 1.1.1 Cyber-physical Systems 1
 - 1.1.2 Distributed Parameter Systems 7
 - 1.2 Motivations for Monograph Research and Application Scenarios . 7
 - 1.2.1 Optimal Measurements in DPS 8
 - 1.2.2 Scenarios for Optimal Operations of a Mobile
Actuator/Sensor Network 9
 - 1.2.3 Fractional-Order Cyber-physical Systems (FOCPS) 12
 - 1.3 Summary of Monograph Contributions 13
 - 1.4 Preview of Chapters 14
- 2 Distributed Parameter Systems: Controllability, Observability, and
Identification 17**
 - 2.1 Mathematical Description 17
 - 2.1.1 System Definition 17
 - 2.1.2 Actuator Definition 18
 - 2.1.3 Sensor Definition 19
 - 2.2 Regional Controllability 21
 - 2.3 Regional Observability 22
 - 2.4 Parameter Identification and Optimal Experiment Design 24
 - 2.4.1 System Definition 24
 - 2.4.2 Parameter Identification 25
 - 2.4.3 Sensor Location Problem 25
 - 2.4.4 Sensor Clustering Phenomenon 26
 - 2.4.5 Dependence of the Solution on Initial Parameter Estimates 27
 - 2.5 Chapter Summary 29
- 3 Optimal Heterogeneous Mobile Sensing for Parameter Estimation
of Distributed Parameter Systems 31**
 - 3.1 Introduction 31

3.2	Optimal Sensor Location Problem	32
3.3	Mobile Sensor Model	35
3.3.1	Node Dynamics	35
3.3.2	Pathwise State Constraints	35
3.3.3	Parameterization of Vehicle Controls	36
3.4	Characterization of Optimal Solutions	37
3.5	Optimal Control Formulation of the Search for the Candidate Support Point	40
3.6	Illustrative Example	41
3.7	Optimal Measurement Problem in the Average Sense	43
3.7.1	A Limitation of the Design of Optimal Sensing Policies for Parameter Estimation	43
3.7.2	Problem Definition	45
3.7.3	An Illustrative Example	46
3.8	Chapter Summary	49
4	Optimal Mobile Remote Sensing Policies	51
4.1	Introduction	51
4.1.1	Literature Review	51
4.1.2	Problem Formulation for PDE Parameter Estimation	52
4.2	Optimal Measurement Problem	54
4.2.1	Mobile Sensor Model	54
4.2.2	Problem Definition	56
4.3	Optimal Control Formulation	56
4.4	An Illustrative Example	58
4.5	Chapter Summary	59
5	Online Optimal Mobile Sensing Policies: Finite-Horizon Control Framework	63
5.1	Introduction	63
5.2	Optimal Mobile Sensing Policy: Finite-Horizon Closed-Loop Solution	64
5.2.1	A DPS and Its Mobile Sensors	64
5.2.2	Interlaced Optimal Trajectory Planning	65
5.2.3	Illustrative Simulations	67
5.2.4	A Second Illustrative Example	67
5.3	Communication Topology in Online Optimal Sensing Policy for Parameter Estimation of Distributed Parameter Systems	71
5.3.1	The Interlaced Scheme with Communication Topology	71
5.3.2	An Illustrative Example	72
5.4	Convergence of the Interlaced Scheme	75
5.5	Chapter Summary	77
6	Optimal Mobile Actuation/Sensing Policies for Parameter Estimation of Distributed Parameter Systems	79
6.1	Introduction	79
6.1.1	Problem Formulation for PDE Parameter Estimation	80

6.2	Optimal Actuation Problem	81
6.2.1	Mobile Actuator Model	81
6.2.2	Problem Definition	82
6.2.3	An Illustrative Example	83
6.3	Optimal Measurement/Actuation Problem	85
6.3.1	Mobile Sensor/Actuator Model	85
6.3.2	Problem Definition	91
6.3.3	An Illustrative Example	92
6.4	Chapter Summary	94
7	Optimal Mobile Sensing with Fractional Sensor Dynamics	97
7.1	Introduction	97
7.2	Fractional Optimal Control Problem Formulation	98
7.3	Oustaloup Recursive Approximation of the Fractional Derivative Operator	99
7.4	Fractional Optimal Control Problem Reformulation. I	101
7.5	Impulse-Response-Based Linear Approximation of Fractional Transfer Functions	102
7.5.1	Approximation Method	102
7.5.2	Suboptimal Approximation of the Fractional Integrator	104
7.6	Fractional Optimal Control Problem Reformulation. II	105
7.7	Illustrative Examples	107
7.7.1	A Linear Time-Invariant Problem	107
7.7.2	A Linear Time-Variant Problem	108
7.8	Optimal Mobile Sensing Policies with Fractional Sensor Dynamics	110
7.8.1	Sensor Dynamics	110
7.8.2	Optimal Measurement Problem	111
7.8.3	Optimal Control Problem Reformulation	112
7.8.4	An Illustrative Example	113
7.9	Chapter Summary	115
8	Optimal Mobile Remote Sensing Policy for Downscaling and Assimilation Problems	117
8.1	Background on Downscaling and Data Assimilation	117
8.1.1	Downscaling	117
8.1.2	Data Assimilation	120
8.2	Downscaling and Assimilation Problems for Surface Soil Moisture	124
8.2.1	Introduction	124
8.2.2	Kaheil and McKee's Algorithm	124
8.3	Introduction of UAV-Based Remote Sensors	128
8.4	Optimal Trajectories for Data Assimilation	128
8.4.1	Description of the Problem	128
8.4.2	Problem Formulation	130
8.4.3	Numerical Method to Find the Solution	130
8.5	An Illustrative Example	131
8.5.1	System's Description	131

8.5.2	Results	131
8.6	Chapter Summary	133
9	Conclusions and Future Work	135
9.1	Conclusions	135
9.2	Future Research Directions	136
9.2.1	Communication Topology Influence on Regional Controllability and Observability for DPS	137
9.2.2	Directed Communication Topologies	137
9.2.3	Regional Identifiability of a DPS	137
Appendix A	Notation	139
A.1	General Notation	139
A.2	Special Notation in Chap. 2	140
A.3	Special Notation in Chap. 3	140
A.4	Special Notation in Chap. 4	140
A.5	Special Notation in Chap. 6	140
A.6	Special Notation in Chap. 7	141
Appendix B	RIOTS Tutorial	143
B.1	Introduction	143
B.2	Features of RIOTS_95	144
B.3	Class of Optimal Control Problems Solvable by RIOTS_95	145
Appendix C	Implementations	147
C.1	Remote Sensors Trajectory Optimization	147
C.2	Online Scheme for Trajectory Optimization	152
C.3	Fractional-Order Trajectory Optimization	157
References	161
Index	169

Optimal Mobile Sensing and Actuation Policies in
Cyber-physical Systems

Tricaud, C.; Chen, Y.

2012, XVIII, 170 p., Hardcover

ISBN: 978-1-4471-2261-6
