## Part I Theory

<b>1</b>	<b>Preliminaries</b>	3
1.1	Restrictions on Rings and Modules	3
1.2	Stable Modules and Tree Structures	5
1.3	Stably Free Modules and Gabel's Theorem	8
1.4	Projective Modules and Hyperstability	10
<b>2</b>	<b>The Restricted Linear Group</b>	13
2.1	Some Identities Between Elementary Matrices	13
2.2	The Restricted Linear Group	15
2.3	Matrices with a Smith Normal Form	16
2.4	Weakly Euclidean Rings	21
2.5	Examples of Weakly Euclidean Rings	22
2.6	The Dieudonné Determinant	25
2.7	Equivalent Formulations of the Dieudonné Condition	27
2.8	A Recognition Criterion for Dieudonné Rings	31
2.9	Fully Determinantal Rings	33
<b>3</b>	<b>The Calculus of Corners and Squares</b>	37
3.1	The Category of Corners	37
3.2	Modules over a Corner	39
3.3	Classification of Modules Within a Local Type	40
3.4	Locally Projective Modules and the Patching Condition	40
3.5	Completing the Square	43
3.6	Practical Patching Conditions	47
3.7	Karoubi Squares	48
3.8	Lifting Stably Free Modules	52
3.9	Stably Free Modules of Locally Free Type	55
3.10	Corners of Determinantal Type	57
3.11	A Bound for the Singular Set	59

<b>4</b>	<b>Extensions of Modules</b>	63
4.1	The Category of Extensions	63
4.2	The Group Structure on $\text{Ext}^1$	67
4.3	The Exact Sequences of $\text{Ext}^1$	71
4.4	The Standard Cohomology Theory of Modules	75
4.5	The Cohomological Interpretation of $\text{Ext}^1$	77
4.6	The Exact Sequences in Cohomology	83
<b>5</b>	<b>The Derived Module Category</b>	89
5.1	The Derived Module Category	89
5.2	Coprojectives and De-stabilization	94
5.3	Corepresentability of $\text{Ext}^1$	98
5.4	The Exact Sequences in the Derived Module Category	100
5.5	Generalized Syzygies	106
5.6	Corepresentability of Cohomology	109
5.7	Swan's Projectivity Criterion	114
<b>6</b>	<b>Finiteness Conditions</b>	117
6.1	Hyperstable Modules and the Category $\text{Der}_\infty$	117
6.2	The Category $\text{Der}_{\text{fin}}$	119
6.3	Finiteness Conditions and Syzygies	120
6.4	Graph Structure on Hyperstabilizations and the Action of $\tilde{K}_0$	122
<b>7</b>	<b>The Swan Mapping</b>	129
7.1	The Structure of Projective 0-Complexes	129
7.2	Endomorphism Rings	132
7.3	The Dual Swan Mapping	134
7.4	Representing Projective 0-Complexes	139
7.5	The Swan Mapping Proper	141
7.6	Stabilising Endomorphisms	145
7.7	Full Modules	146
<b>8</b>	<b>Classification of Algebraic Complexes</b>	151
8.1	Algebraic $n$ -Complexes	151
8.2	A Cancellation Theorem for Chain Homotopy Equivalences	153
8.3	Connectivity of $\mathbf{Alg}_n(M)$	155
8.4	Comparison of Trees	157
8.5	Counting the Fibres of $\pi_n$	160
8.6	Realizing Algebraic $n$ -Complexes for $n \geq 3$	161

## Part II Practice

<b>9</b>	<b>Rings with Stably Free Cancellation</b>	167
9.1	Group Algebras and the Retraction Principle	167
9.2	Dedekind Domains	168
9.3	Free Group Algebras over Division Rings	169
9.4	Local Rings and the Nakayama-Bourbaki Lemma	170
9.5	Matrix Rings	171
9.6	Iterated Fibre Products	172

<b>10</b>	<b>Group Rings of Cyclic Groups</b>	175
10.1	Stably Free Modules over $\mathbf{Z}[\Phi]$	175
10.2	Stably Free Cancellation for $\mathbf{Z}[F_n \times C_p]$	176
10.3	Stably Free Cancellation for $\mathbf{Z}[C_\infty \times C_m]$	178
10.4	Stably Free Modules over $\mathbf{Z}[F_n \times C_4]$	180
<b>11</b>	<b>Group Rings of Dihedral Groups</b>	185
11.1	Stably Free Cancellation for a Class of Cyclic Algebras	185
11.2	Extending over Free Group Rings	191
11.3	Stably Free Cancellation for $\mathbf{Z}[C_\infty \times D_{2p}]$	194
11.4	Stably Free Modules over $\mathbf{Z}[F_n \times D_4]$	196
<b>12</b>	<b>Group Rings of Quaternion Groups</b>	199
12.1	An Elementary Corner Calculation	199
12.2	Local Properties of Quaternions at Odd Primes	201
12.3	A Quaternionic Corner Calculation	204
12.4	Stably Free Modules over $\Omega[t, t^{-1}]$	205
12.5	Stably Free Modules over $\mathbf{Z}[C_\infty \times Q(8)]$	207
12.6	Extension to Generalized Quaternion Groups	208
<b>13</b>	<b>Parametrizing <math>\Omega_1(\mathbf{Z})</math>: Generic Case</b>	213
13.1	Minimality of the Augmentation Ideal	213
13.2	Parametrizing $\Omega_1(\mathbf{Z})$ in the Generic Case	215
13.3	Case I: $G$ Finite	218
13.4	Case II: $G$ Infinite and $\text{Ext}_\Lambda^1(\mathbf{Z}, \Lambda) = 0$	219
<b>14</b>	<b>Parametrizing <math>\Omega_1(\mathbf{Z})</math>: Singular Case</b>	221
14.1	The Second Minimality Criterion	221
14.2	Parametrizing $\Omega_1$	223
14.3	Infinite Branching in $\Omega_1(\mathbf{Z})$	225
<b>15</b>	<b>Generalized Swan Modules</b>	227
15.1	Quasi-Augmentation Sequences and Swan Modules	227
15.2	Generalized Swan Modules and Rigidity	230
15.3	Classification of Generalized Swan Modules	232
15.4	Completely Decomposable Swan Modules	235
<b>16</b>	<b>Parametrizing <math>\Omega_1(\mathbf{Z})</math>: <math>G = C_\infty \times \Phi</math></b>	239
16.1	The Syzygies of $F_m \times C_n$	239
16.2	Two Calculations	241
16.3	The Third Minimality Criterion	242
16.4	Decomposition in a Special Case	246
16.5	Eliminating Ambiguity in the Description	248
16.6	Complete Description of the First Syzygy (Tame Case)	250
<b>17</b>	<b>Conclusion</b>	255
17.1	The $\mathcal{R}(2)$ Problem for $C_\infty \times C_m$	255
17.2	A Duality Theorem for Syzygies	258

17.3 A Duality Theorem for Relation Modules . . . . .	260
17.4 The Current State of the $\mathcal{R}(2)$ – $\mathcal{D}(2)$ Problem . . . . .	261
<b>Appendix A A Proof of Dieudonné’s Theorem . . . . .</b>	<b>265</b>
<b>Appendix B Change of Ring . . . . .</b>	<b>273</b>
B.1 Extension and Restriction of Scalars . . . . .	273
B.2 Adjointness in Cohomology . . . . .	274
B.3 Adjointness in the Derived Module Category . . . . .	275
B.4 Preservation of Syzygies and Generalized Syzygies by $\varphi_*$ , $\varphi^*$ . . . .	276
B.5 Co-adjointness and the Eckmann-Shapiro Lemma . . . . .	276
<b>Appendix C Group Rings with Trivial Units . . . . .</b>	<b>279</b>
<b>Appendix D The Infinite Kernel Property . . . . .</b>	<b>283</b>
<b>References . . . . .</b>	<b>289</b>
<b>Index . . . . .</b>	<b>293</b>
