

Contents

1	Introduction: Away from Trial and Error Methods.	1
2	Materials and Interfaces in Microsystems	7
2.1	Levels of Interconnections, Typical Stress Factors and Related Failure Mechanisms	7
2.1.1	IC Level	8
2.1.2	Package Level	10
2.1.3	Board Level	20
	References	22
3	Introduction to Mechanics of Materials	25
3.1	Deformation of Electronic Materials	27
3.2	Restoration of Plastically Deformed Metals	30
3.3	Formation of Strains and Stresses in the Electronic Assemblies	31
3.3.1	Electronic Component Boards Assemblies under Changes of Temperature	31
3.3.2	Electronic Component Boards under Vibration and Mechanical Shock Loading	34
3.4	Failures in Electronic Component Boards	38
3.4.1	Fracture Modes	40
3.4.2	Fatigue Failures	40
	References	42
4	Introduction to Thermodynamic-Kinetic Method	45
4.1	Thermodynamics	45
4.1.1	Gibbs Free Energy and Thermodynamic Equilibrium	46
4.1.2	The Chemical Potential and Activity in a Binary Solid Solution	49

4.1.3	Driving Force for Chemical Reaction	51
4.1.4	The Phase Rule and Phase Diagrams	52
4.1.5	Thermodynamics of Phase Diagrams	53
4.1.6	Calculation of Phase Diagrams	66
4.1.7	Local Equilibrium in Thin Film System?	71
4.1.8	The Use of Gibbs Energy Diagrams	71
4.2	Diffusion Kinetics	76
4.2.1	Multiphase Diffusion	76
4.2.2	Diffusion Couples and the Diffusion Path	80
4.3	Microstructures	84
4.3.1	The Role of Grain Boundaries	84
4.3.2	The Role of Impurities	86
4.3.3	Segregation	87
4.3.4	Amorphous Structures	88
4.3.5	The Role of Nucleation	89
4.3.6	The Role of Steep Concentration Gradients	95
4.4	Summary	97
	References	97
5	Interfacial Adhesion in Polymer Systems	101
5.1	Adsorption	102
5.1.1	Enthalpy of Adsorption	102
5.1.2	Specificity	103
5.1.3	Reversibility	103
5.1.4	Thickness of the Adsorbed Layer	103
5.1.5	Conditions of Adsorption	103
5.2	Surface Energy and the Wetting of a Solid Polymer Surface	105
5.2.1	Equation-of-State Model	107
5.2.2	Surface Free Energy Component Models	109
5.3	Kinetics of Wetting	112
5.3.1	Role of Surface Roughness and Capillary Action	112
5.3.2	Role of Chemical Surface Homogeneity	113
5.3.3	Influence of Interphasial Interactions	114
5.3.4	Influence of liquid viscosity	114
5.4	Surface Modification	115
5.5	A Brief Look at the Adhesion Mechanisms	118
5.5.1	Adsorption Mechanism (Contact Adhesion)	118
5.5.2	Diffusion Mechanism	119
5.5.3	Mechanical Interlocking Mechanism	119
5.5.4	Electrostatic Mechanism	119
5.5.5	Adhesion Mechanisms in Practice	120
5.6	Durability of Interfacial Adhesion	123

5.7	Measurement of Interfacial Adhesion	124
5.8	Work of Adhesion	126
5.8.1	Testing the Adhesion Strength-Quantitative versus Qualitative	126
	References	128
6	Evolution of Different Types of Interfacial Structures	135
6.1	Examples of Metal–Metal Interfaces	135
6.1.1	Au/Al in Wire Bonding	135
6.1.2	Sn-Based Solder Versus UBM in Flip Chip	140
6.1.3	Ni or Ni(P) Metallisation on PWB Versus SnAgCu solder	151
6.1.4	Redeposition of AuSn ₄ on Top of Ni ₃ Sn ₄	159
6.1.5	Zn in Lead-Free Soldering	171
6.1.6	Deformation Induced Interfacial Cracking of Sn-Rich Solder Interconnections	172
6.1.7	Diffusion and Growth Mechanism of Nb ₃ Sn Superconductor	177
6.2	Examples of Metal–Ceramic Interfaces	181
6.2.1	Cu/diffusion Barrier/Si Systems	181
6.2.2	Reactive Brazing of Ceramics	188
6.2.3	Reactions Between Non-Nitride Forming Metals and Si ₃ N ₄	192
6.3	Example of Metallisation Adhesion on a Polymer Substrate	194
6.4	Example of Polymer/Polymerisation Adhesion on Metal Substrate	198
6.5	Example of Polymer Coating Adhesion on a Polymer Substrate	200
6.6	Some Examples of Epoxy Polymer Surface Treatments	201
	References	204
	Index	213

Interfacial Compatibility in Microelectronics

Moving Away from the Trial and Error Approach

Laurila, T.; Vuorinen, V.; Paulasto-Kröckel, M.; Turunen, M.; Mattila, T.T.; Kivilahti, J.

2012, X, 218 p., Hardcover

ISBN: 978-1-4471-2469-6
