## Part I    Finitely Generated Abelian Groups

<b>1</b>	<b>Matrices with Integer Entries: The Smith Normal Form</b>	9
1.1	Reduction by Elementary Operations	9
1.2	Existence of the Smith Normal Form	17
1.3	Uniqueness of the Smith Normal Form	32
<b>2</b>	<b>Basic Theory of Additive Abelian Groups</b>	47
2.1	Cyclic $\mathbb{Z}$ -Modules	47
2.2	Quotient Groups and the Direct Sum Construction	61
2.3	The First Isomorphism Theorem and Free Modules	75
<b>3</b>	<b>Decomposition of Finitely Generated <math>\mathbb{Z}</math>-Modules</b>	97
3.1	The Invariant Factor Decomposition	98
3.2	Primary Decomposition of Finite Abelian Groups	120
3.3	Endomorphism Rings and Isomorphism Classes of Subgroups and Quotient Groups	133

## Part II    Similarity of Square Matrices over a Field

<b>4</b>	<b>The Polynomial Ring <math>F[x]</math> and Matrices over <math>F[x]</math></b>	165
4.1	The Polynomial Ring $F[x]$ where $F$ is a Field	166
4.2	Equivalence of Matrices over $F[x]$	187

---

<b>5</b>	<b><math>F[x]</math>-Modules: Similarity of <math>t \times t</math> Matrices over a Field <math>F</math></b>	203
5.1	The $F[x]$ -Module $M(A)$	203
5.2	Cyclic Modules and Companion Matrices	227
<b>6</b>	<b>Canonical Forms and Similarity Classes of Square Matrices over a Field</b>	251
6.1	The Rational Canonical Form of Square Matrices over a Field	252
6.2	Primary Decomposition of $M(A)$ and Jordan Form	274
6.3	Endomorphisms and Automorphisms of $M(A)$	306
	<b>Solutions to Selected Exercises</b>	339
	<b>Index</b>	379
