
Contents – Volume 2:

Functional Analytic Methods and Differential Geometric Applications

Chapter 7	Operators in Banach Spaces	1
1	Fixed Point Theorems	1
2	The Leray-Schauder Degree of Mapping	12
3	Fundamental Properties for the Degree of Mapping	18
4	Linear Operators in Banach Spaces	23
5	Some Historical Notices to the Chapters 3 and 7	30
Chapter 8	Linear Operators in Hilbert Spaces	33
1	Various Eigenvalue Problems	33
2	Singular Integral Equations	47
3	The Abstract Hilbert Space	56
4	Bounded Linear Operators in Hilbert Spaces	66
5	Unitary Operators	78
6	Completely Continuous Operators in Hilbert Spaces	89
7	Spectral Theory for Completely Continuous Hermitian Operators	106
8	The Sturm-Liouville Eigenvalue Problem	113
9	Weyl's Eigenvalue Problem for the Laplace Operator	120
10	Some Historical Notices to Chapter 8	128
Chapter 9	Linear Elliptic Differential Equations	131
1	The Differential Equation $\Delta\phi + p(x, y)\phi_x + q(x, y)\phi_y = r(x, y)$	131
2	The Schwarzian Integral Formula	137
3	The Riemann-Hilbert Boundary Value Problem	140
4	Potential-theoretic Estimates	148
5	Schauder's Continuity Method	160
6	Existence and Regularity Theorems	165
7	The Schauder Estimates	173
8	Some Historical Notices to Chapter 9	189

Chapter 10 Weak Solutions of Elliptic Differential Equations	191
1 Sobolev Spaces	191
2 Embedding and Compactness	205
3 Existence of Weak Solutions	212
4 Boundedness of Weak Solutions	216
5 Hölder Continuity of Weak Solutions	219
6 Weak Potential-theoretic Estimates	231
7 Boundary Behavior of Weak Solutions	238
8 Equations in Divergence Form	242
9 Green's Function for Elliptic Operators	248
10 Spectral Theory of the Laplace-Beltrami Operator	257
11 Some Historical Notices to Chapter 10	260
 Chapter 11 Nonlinear Partial Differential Equations	261
1 The Fundamental Forms and Curvatures of a Surface	261
2 Two-dimensional Parametric Integrals	267
3 Quasilinear Hyperbolic Differential Equations and Systems of Second Order (Characteristic Parameters)	275
4 Cauchy's Initial Value Problem for Quasilinear Hyperbolic Differential Equations and Systems of Second Order	283
5 Riemann's Integration Method	293
6 Bernstein's Analyticity Theorem	297
7 Some Historical Notices to Chapter 11	303
 Chapter 12 Nonlinear Elliptic Systems	305
1 Maximum Principles for the H -surface System	305
2 Gradient Estimates for Nonlinear Elliptic Systems	312
3 Global Estimates for Nonlinear Systems	325
4 The Dirichlet Problem for Nonlinear Elliptic Systems	329
5 Distortion Estimates for Plane Elliptic Systems	337
6 A Curvature Estimate for Minimal Surfaces	345
7 Global Estimates for Conformal Mappings with respect to Riemannian Metrics	350
8 Introduction of Conformal Parameters into a Riemannian Metric	358
9 The Uniformization Method for Quasilinear Elliptic Differential Equations	364
10 Some Historical Notices to Chapter 12	365
 Chapter 13 Boundary Value Problems from Differential Geometry	367
1 The Dirichlet Problem for Graphs of Prescribed Mean Curvature	367

2	Winding Staircases and Stable Minimal Graphs on a Riemann Surface	378
3	Mixed Boundary Value Problem for Minimal Graphs over the Etale Plane	388
4	Plateau's Problem with Constant Mean Curvature.....	401
5	Closed Surfaces of Constant Mean Curvature	407
6	One-to-one Solutions of Lewy-Heinz Systems	416
7	On Weyl's Embedding Problem and Elliptic Monge-Ampère Equations	433
8	Some Historical Notices to Chapter 13	441
References		445
