1	Light Energy Conversion at Carbon Nanotubes - Organic and Inorganic Interfaces: Photovoltaics, Photodetectors and Bolometers	1
1.1	Introduction: Light Absorption and Charge Separation in Carbon Nanotubes Interfaced with Other Materials	1
1.2	CNT/Organic Based Photovoltaics and Photodetectors	4
1.2.1	CNTs Interfaced with Small Molecules	4
1.2.2	Role Carbon Nanotubes in Light Absorption and Photocarrier Generation: CNT/Fullerene Solar Cells and Photodetectors	18
1.2.3	CNT/Polymer Solar Cells.	22
1.2.4	Photocarrier Separation and Multiplication at $p-n$ CNT Junction	27
1.3	CNT/Quantum Dots Photoinduced Charge Transfer and Related Photovoltaic Effect	30
1.4	CNT/Semiconductor Based Photovoltaics and Photodetectors	35
1.4.1	CNT/Si Solar Cells.	35
1.4.2	CNT/Si Mid-IR Photodetectors	39
1.4.3	Carbon Nanotubes Interfaced with Other Semiconductors, Nanostructured and Amorphous Si and Perspective of CNT/Semiconductor Hybrid Photovoltaics	41
1.5	CNT/Polymer Based Bolometers	46
1.5.1	Bolometric Response of Pristine CNT Films	47
1.5.2	CNT/Polymer Bolometers	50
1.6	Conclusion	53
	References	54
2	Use of Carbon Nanotubes in Photoactuating Composites	69
2.1	Introduction	69
2.2	Carbon Nanotube Bundles and Freestanding Films	70
2.2.1	Freestanding Bundles	70
2.2.2	Freestanding Films	71

2.3	Carbon Nanotubes in Mixed Composites.	73
2.3.1	Rubbery Polymer Host Materials.	73
2.3.2	Hydrogel Host Materials	77
2.4	Carbon Nanotube Layered Composites	77
2.4.1	Carbon Nanotube/Acrylic Elastomer/Poly (vinylchloride) Trilayer Composites	77
2.4.2	Carbon Nanotube/Photoresist Bilayer Composites	78
2.4.3	Carbon Nanotube/Silicon Nitride Bilayer Composites	80
2.4.4	Carbon Nanotube/Nafion Bilayer Composites.	80
2.5	Conclusions	85
	References	85
3	Photophysical Properties of SWNT Interfaced with DNA	89
3.1	Introduction	89
3.2	SWNT:DNA Hybrid: Structures and Energy Interaction.	91
3.2.1	DNA Helix on SWNT	91
3.2.2	Nucleic Bases on SWNT: <i>Ab initio</i> Calculation.	94
3.2.3	Calculation of Nucleoside Binding to SWNT	97
3.2.4	Structures of Oligonucleotides Adsorbed on SWNT and Energy Interaction Between Them: Molecular Dynamics Simulation.	97
3.2.5	Wrapping of Relatively Long DNA Around SWNT	103
3.2.6	Influence of Adsorbed Biopolymer Structure on Optical Properties of SWNT: Double-Stranded DNA Adsorbed on the Nanotube Surface	105
3.3	Absorption Spectroscopy of SWNT Interfaced with DNA	108
3.3.1	Absorption Spectroscopy of SWNTs.	108
3.3.2	Absorption Spectra Analyses of SWNT Composition.	111
3.3.3	Comparison of Absorption Spectra of SWNTs Covered with DNA or Surfactants	115
3.3.4	Peculiarities of SWNT and DNA Interaction Revealed in Absorption Spectra.	118
3.3.5	The Effect of ss-DNA Helical Negative Potential on the SWNT Electronic Spectrum	123
3.4	Photoluminescence of Semiconducting SWNTs: The Influence of Environment.	124
3.4.1	Emission Properties of Semiconducting SWNTs.	124
3.4.2	Quantum Yield of Semiconducting SWNT Emission: The Role of DNA Coverage.	132
3.4.3	Influence of Environment on SWNT Photoluminescence Properties	136
3.4.4	Comparison of Protection Properties of SDS, SDBS and DNA Covering of SWNTs Against pH Influence Using Luminescence and Absorption Spectroscopy	144
