

Contents

- 1 The Earth Observation Perspective..... 1**
 - 1.1 Earth Observation and Environment..... 2
 - 1.2 Confronting Complexity 3
 - 1.3 Remote Sensing Theory and Practice..... 6
 - 1.4 Bringing Remote Sensing Down to Earth 13
 - 1.5 Moving Forward 20
 - References..... 21

- 2 Environmental Sensing..... 23**
 - 2.1 Sensing the Environment 24
 - 2.2 The Environmental System 24
 - 2.3 Pattern, Process, and Disturbance 30
 - 2.4 Patches and Progressions 36
 - 2.5 Sensing the Human Dimension..... 38
 - 2.6 Acknowledging Uncertainty 43
 - 2.7 The Role of Measurement 44
 - 2.8 The Logic of Maybe 46
 - 2.9 Summary 47
 - References..... 48

- 3 Sensors and Systems..... 51**
 - 3.1 Data Acquisition Fundamentals 51
 - 3.2 Footprints and Formats 57
 - 3.3 Sensor Characteristics..... 59
 - 3.4 Summary 80
 - References..... 81

4	Fundamentals of Image Processing	83
4.1	Information: Defined	83
4.2	Explanation and Classification	85
4.3	Recognizing Pattern	87
4.4	Classification Schemas	89
4.5	Summary	107
	References	108
5	Sensing Uncertainty	111
5.1	Embracing Imprecision	111
5.2	Soft Classification Strategies	114
5.2.1	Fuzzy Classification	115
5.2.2	Implementing Fuzzy-Based Strategies	120
5.3	Evidence-Based Classification	122
5.4	Bayesian Classification	126
5.5	Mixtures and Subpixel Analysis	128
5.5.1	Spectral Unmixing and Spectral Mixture Analysis	129
5.6	Summary	131
	References	132
6	Environmental Characterization	135
6.1	The Characterization Question	136
6.2	Classification as Characterization	141
6.3	Indicator Science	145
6.4	Environmental Indicators and Transforms	148
6.4.1	Vegetation Transform	148
6.4.2	Landscape Metrics	153
6.4.3	Customized Band Ratios	158
6.4.4	Statistical Estimation	159
6.5	Summary	164
	References	165
7	Environmental Monitoring and Change Detection	169
7.1	Principles of Environmental Monitoring	169
7.2	Monitoring Remotely	174
7.3	Sensing Change	176
7.4	Change Detection Algorithms	182
7.4.1	Algebraic Techniques	183
7.4.2	Classification-Based Techniques	185
7.5	The Thresholding Question	186
7.6	Summary	189
	References	189

8 Thermal Sensing and Anomaly Detection	193
8.1 Principles of Thermal Remote Sensing	193
8.2 Moving to Measurement	197
8.3 Anomaly Detection and Mapping	203
8.4 Anomaly Detection Algorithms	206
8.5 Summary	210
References	211
9 Hyperspectral Sensing	213
9.1 Moving to the Hyperspectral	213
9.2 Imaging Spectroscopy	217
9.3 Endmember Spectra	222
9.4 Mixtures and Models	228
9.5 Managing Endmembers	230
9.6 Compiling Spectral Libraries	233
9.7 Developing Hyperspectral Applications	234
9.8 Summary	236
References	236
10 Hyperspectral Classification	239
10.1 Processing Fundamentals	239
10.2 Hyperprocessing	242
10.3 Hyperspectral Processing Strategies	248
10.3.1 Whole-Pixel Analysis	249
10.3.2 Subpixel Analysis	250
10.4 Interpretation and Explanation	254
10.5 Summary	256
References	257
11 Object-Based Analysis	259
11.1 Objects and Segments	259
11.2 The Role of Homogeneity	264
11.3 The Object-Based Paradigm	266
11.4 Object-Based Classification	269
11.5 Uncertainty Management	272
11.6 Finding a Fit	273
11.7 Limitations and Constraints	275
11.8 Summary	276
References	276

12 Forensic Remote Sensing	279
12.1 Remote “Fingerprinting”	280
12.2 Baselines and Benchmarks	282
12.3 Sensing Beyond the Obvious	290
12.4 Creative Problem Solving	298
12.5 Summary	298
References	299
13 Integrative Sensing	303
13.1 Integrative Sensing: Geomatics in Action	303
13.2 GIS Primitives	305
13.3 Raster Modeling	308
13.4 Image-Based Modeling	310
13.5 Environmental Sensor Nets and Webs	313
13.6 Sensing on the Horizon	319
13.7 Summary	321
References	321
Index	325

Environmental Sensing
Analytical Techniques for Earth Observation

Lein, J.K.

2012, XIV, 334 p., Hardcover

ISBN: 978-1-4614-0142-1
