## Part I

<b>1</b>	<b>Fundamental Concepts of Distance Measurement Using Synchronized Clocks</b>	<b>3</b>
1.1	The Fundamental Process of Measuring Distance	3
1.2	Comments on the Use of Models and the ICD-200 Document	3
1.3	Distance Measurement by Time of Arrival Measurement	4
1.4	The Physical Process of Clock Synchronization	5
1.5	Magic Binoculars	6
1.6	A Simple Light Pulse Transmitter and Receiver to Measure Distance	7
1.7	Problems with the Simple Light Pulse Transmitter/Receiver System	8
1.8	A New Clock Model	8
1.9	A “Time Transfer” Linear Model	10
1.10	Clock Synchronization	12
1.11	Time Transfer Linear Model with Receiver Clock Not Synchronized to Clocks A and B	13
1.12	A Master Clock	15
1.13	A “Second” Counting Dial for the Clock (Modified TOW)	18
1.14	Time Tag the Pictures	20
1.15	The Subtle Problem of Delays at the Receiver	20
1.16	Extending Position Measurement to 3-D Space	22
1.17	Summary	22
<b>2</b>	<b>Introduction to the Global Positioning System</b>	<b>23</b>
2.1	The Satellite System	23
2.2	Physical Constants of a GPS Satellite Orbit That Passes Directly Overhead	24

2.3	A Model for the GPS SV Clock System .....	25
2.4	Calculating Tbias Using One SV, User Position Known .....	26
2.5	GPS Time Receiver Using Master Clock and the Delay term $T_{atm}$ .....	28
2.6	Solving For User Position Using Four Satellites.....	30
2.7	The Pseudo-Range .....	33
2.8	A Simplified Model of the GPS Receiver.....	33
2.9	The Receiver Reference Oscillator.....	35
2.10	Satellite Position Information .....	36
2.11	Summary.....	36
<b>3</b>	<b>GPS Signal Structure and Use .....</b>	<b>39</b>
3.1	A GPS SV Transmitter Model.....	39
3.1.1	Embedded Timing in the 50 Hz Data.....	41
3.1.2	BPSK Modulated Carrier .....	42
3.1.3	The Reset Line .....	44
3.2	Virtual Time Alignment .....	44
3.3	The C/A Code in GPS Receivers.....	45
3.4	Hidden Signals.....	45
3.4.1	Data Hiding and Data-Modulated Carrier Spectrum .....	47
3.5	Received Signal Power by User at Earth's Surface.....	47
3.6	P-Code Receivers.....	48
3.7	GPS Data Structure Overview.....	48
3.7.1	Using the Data to "Set" Replica Clock Dials in the Receiver.....	51
3.8	The Doppler Problem.....	51
3.9	Summary .....	54
<b>4</b>	<b>Solving for SV Position .....</b>	<b>55</b>
4.1	SV Position .....	55
4.2	Coordinate System.....	55
4.3	Multiple Clocks, One Master Clock, and One Time Unit .....	56
4.3.1	The SV Clock Correction Terms.....	57
4.3.2	The Ephemeris Time Reference Variables $t_{oe}$ and $t_k$ .....	57
4.3.3	Ephemeris Reference Time, $t_{oe}$ .....	58
4.3.4	The Delta Time $t_k$ .....	59
4.3.5	Computing $t_k$ for Any Given "Time Sent" .....	59
4.3.6	Comments on the Time Scaling of $t_{oe}$ and $t_k$ .....	59
4.4	GPS SV Orbit Description.....	62
4.4.1	Solving the Equations for the SV Position and Speed....	62
4.4.2	Second- and Third-Order Correction Terms.....	65
4.4.3	Some Comments on the Ephemeris Data and Solving for the SV Position .....	68
4.4.4	Other SV Orbit Information, Almanac Data.....	68

4.5	Age/Issue of Data Terms .....	68
4.6	$t_{oc}$ SV Clock Reference Time .....	69
4.7	Summary .....	69
<b>5</b>	<b>Solving for User Position.....</b>	<b>71</b>
5.1	Iteration Versus Direct Solution.....	71
5.2	Linear Approximation .....	71
5.3	The Pseudo Range Equations for Four SV .....	72
5.4	Forming the Nominal Pseudo-Range.....	73
5.5	Forming the Estimate of the Pseudo-Range to Each SV.....	73
5.6	Resulting Linear Equation Set.....	74
5.7	Estimating the $\Delta PR_i$ Term.....	74
5.8	Matrix Form of Solution.....	75
5.9	Flowchart, C Code Program, Assumed Initial Position/User Clock Bias .....	76
5.10	Testing for Solution .....	76
5.11	Geometry Considerations.....	80
5.12	Converting User Position to Lat/Long/Altitude from ECEF Coordinates (Spherical Earth).....	80
5.13	Corrections for Non-Spherical Earth .....	81
5.14	Summary.....	81

## Part II

<b>6</b>	<b>GPS Receiver Hardware Fundamentals.....</b>	<b>85</b>
6.1	Analog Versus Digital GPS Receivers .....	85
6.2	Five Fundamental Steps in the GPS Receiver Hardware .....	86
6.2.1	Receive RF and Convert to a Lower IF.....	86
6.2.2	Signal Acquisition.....	86
6.2.3	Data Demodulation and Data Clock Recovery .....	87
6.2.4	Properly Set the 1 s and Second-Counting Dials .....	87
6.2.5	Measure Tsent and Trec.....	87
6.3	Block Diagram of Shared Signal Processing for a Single-Channel Receiver .....	87
6.3.1	Antenna.....	89
6.3.2	Pre-amp.....	89
6.3.3	Bandpass and Mixer Stages Up to Second IF .....	89
6.4	Overview of Second IF Processing.....	90
6.4.1	The Doppler Scan/Track Subsystem.....	90
6.4.2	Second Mixer, LO2, and Doppler Scan/Track.....	91
6.4.3	Correlator and C/A Code Scan/Track Subsystem .....	91
6.5	Signal Acquisition .....	92
6.5.1	C/A Code Clock Doppler .....	92
6.5.2	Substantial Time Is Needed to Search for Code and Doppler Lock .....	93

6.5.3	Time Can Be Reduced with Prior Knowledge.....	93
6.5.4	Estimate of Signal Acquisition Time .....	93
6.6	Data Demodulator .....	94
6.7	SV Replica Clock Block Diagram .....	94
6.8	The Data Clock Recovery Problem (The 20 ms Dial of Replica Clock) .....	96
6.8.1	Recovering the Data Clock Phase (Setting the 20 ms Dial) .....	97
6.8.2	Noise Effects on Jitter of 50 Hz Data.....	97
6.9	Recovery of the Correct Phase of the 1 s Dial .....	98
6.10	The Second Counting Dial of the Received SV Clock .....	98
6.11	Generating the SNAP_SHOT Signal (Receivers Reference Clock) .....	100
6.12	Recording SV Replica Clock Time at SNAP_SHOT Instant .....	100
6.13	The Data Record Method.....	102
6.14	Data Processing.....	102
6.15	Absence of AGC.....	103
6.16	Summary.....	103
<b>7</b>	<b>Functional Implementation of a GPS Receiver .....</b>	<b>105</b>
7.1	RF Conversion to First IF .....	105
7.1.1	Antenna and Pre-amp .....	105
7.1.2	1,575 MHz Bandpass Filter .....	107
7.1.3	First Mixer, 46 MHz IF and Filter, IF Power Splitter ...	108
7.2	Second Converter to 10.7 MHz IF .....	108
7.2.1	Mixer and VCXO Removes Doppler Offset.....	108
7.2.2	10.7 MHz BPF and Amp.....	111
7.2.3	10.7 MHz Correlator with Crystal Filter.....	111
7.3	10.7 IF Processing Using SA615 .....	113
7.3.1	SA615 IF Processor .....	113
7.3.2	Correlation Detection and Demod of Dither AM Using RSSI .....	113
7.3.3	Quadrature Detection of 50 Hz BPSK Data .....	113
7.3.4	Limited 10.7 IF to Frequency Counter .....	114
7.4	Doppler Scan Track Subsystem .....	114
7.4.1	Frequency Counter Frequency Discriminator .....	116
7.4.2	Center Frequency Control.....	116
7.4.3	Digital Doppler Loop Filter.....	116
7.4.4	Level Detection and SCAN/TRAK .....	117
7.5	Code Tracker.....	117
7.5.1	Tau-Dither Code Lock .....	117
7.5.2	EX-OR Detection of Code Error.....	119
7.5.3	Active Bandpass Filter Recovers Tau-Dither AM Signal .....	119

7.5.4	Digital Filtering of Code Error Sign Bit.....	120
7.5.5	Code Clock Modulator.....	122
7.5.6	C/A Code Generator, SV Replica Clock, Phase State Counters and Latches .....	124
7.5.7	An Example of a C/A Code Generator w/Tau-Dither.....	126
7.6	Signal Acquisition Process.....	126
7.6.1	Searching for the Signal, Search Rates, and Alternate Methods .....	127
7.6.2	Detecting Code or Doppler Lock and Switching to Track .....	128
7.7	Data Demodulator.....	128
7.7.1	Block Diagram of Data Demodulator, Operation .....	128
7.7.2	50 Hz Data RESET's the Divide by 20 Block .....	130
7.8	Summary .....	131

### Part III

<b>8</b>	<b>GPS Time and Frequency Reception .....</b>	<b>135</b>
8.1	GPS Receiver in Time and Frequency, Rate and Phase Errors.....	135
8.1.1	An Instrumentation Model of GPS Receiver Clock Rate and Phase Measurements.....	136
8.1.2	Reported Rate and Phase Precision and Scale.....	137
8.1.3	Corrected and Uncorrected Receiver Clocks .....	138
8.1.4	Typical Receiver Reference Clock System and Rate Error Propagation .....	139
8.2	Limits on Estimating Receiver Clock Rate and Phase Errors .....	140
8.2.1	Estimating Predicted Doppler Error Due to User Position Uncertainty.....	141
8.2.2	Detectable L1 Carrier Phase Rate Limits and Clock Rate Error Precision.....	142
8.2.3	Receiver Reference Clock Quality and Rate Error Limits.....	143
8.2.4	Measuring Carrier Rate, Doppler and Receiver Clock Rate Error .....	145
8.2.5	Estimating Receiver Clock Rate Error .....	146
8.2.6	C/A Code Phase Measurements Limit Time precision in L1 Time Transfer (Clock Mode) .....	146
8.3	Initial Estimate of GPS Time .....	148
8.3.1	SV to USER Signal Delay .....	149
8.3.2	Estimating Path Delay .....	149
8.4	Verifying the Veracity of Reported Receiver Clock Rate and Phase Errors .....	149

8.5	Using a DDS Based Receiver Clock to Introduce Precise Rate and Phase Errors .....	153
8.6	GPS Disciplined Oscillators .....	155
8.7	A Rate Corrected DDS 5/10 MHz Reference Based on Any 10 MHz Clock .....	157
8.7.1	A Mechanical Model of Rate Corrected DDS 5/10 MHz Reference Based on Any 10 MHz Clock .....	160
8.8	Receiver Delays in GPS Time Transfer .....	162
8.9	Antenna Phase Center .....	164
8.10	Summary .....	166
<b>9</b>	<b>The Zarlink 12-Channel GPS Receiver .....</b>	<b>167</b>
9.1	The Zarlink GP2015 RF Downconverter .....	167
9.1.1	Triple Conversion to 4.039 MHz IF .....	167
9.1.2	Digital Sampling Creates IF@ 1.405 MHz .....	169
9.1.3	GP2015/GP2021 Clock Signals and Complex Mode .....	170
9.1.4	The TIC Signal .....	170
9.2	ZarLink GP2021 12-Channel Baseband Processor .....	171
9.2.1	Single-Channel Block Diagram .....	171
9.2.2	Doppler Offset Removal .....	171
9.2.3	C/A Code Sliding Correlators .....	174
9.2.4	C/A Code-Clock Generator .....	174
9.2.5	Prompt Channel, Early, Late, and Dither Codes .....	175
9.2.6	C/A Code Scanning, Slewing .....	175
9.2.7	Code-Phase Counter and Code-Clock Phase .....	175
9.3	The 16-Bit Accumulators .....	176
9.3.1	How Do the 16-Bit Accumulators Work? .....	176
9.3.2	The DUMP Signal .....	177
9.3.3	Digital Accumulators as Integrators .....	178
9.3.4	Approximating a Digital Accumulator as Analog Lowpass Filter .....	178
9.4	An Analog Model of the Doppler Loop .....	180
9.4.1	Assume VCO Is Exactly Correct in Phase and Frequency .....	180
9.4.2	Adjustable Baseband Bandwidth for Track .....	182
9.4.3	Doppler, Code Scan, and Threshold Detects .....	182
9.4.4	Doppler Acquisition and Track .....	183
9.5	Analog Model Approximates Unlocked Output Waveforms .....	183
9.5.1	Case 1 Frequency VCO in Error by 90 Hz .....	184
9.5.2	Case 2 Frequency of VCO in Error by 10 Hz .....	185
9.5.3	Case 3 VCO Frequency Error is Zero, Small Residual Phase Error .....	185
9.5.4	Getting Code Lock Using I and Q Data .....	186

9.6	Getting Frequency Discriminator Information from I/Q Processing .....	186
9.6.1	Analytic Signal Interpretation of $f_d$ Sign Change .....	188
9.7	Cycle Counting in the GP2021 .....	188
9.8	Summary .....	189
<b>10</b>	<b>Carrier Phase Measurements and Turbo Rogue Receivers.....</b>	<b>191</b>
10.1	A Mechanical Clock Model of Carrier Phase Range Measurement .....	191
10.1.1	Observer Sees Pure Doppler and Static Phase Offsets on Difference Clock Dial .....	193
10.1.2	Difference Clock Changes Direction of Rotation When Doppler Changes Sign .....	193
10.1.3	Full Cycle Counting, Partial Cycles, and Sign Issues .....	193
10.1.4	Range Measurement Using Full and Fraction Cycles of Difference Dial, Integrated Doppler .....	194
10.1.5	The Initial Value of the Full Cycle Counter .....	194
10.1.6	Practical Issues .....	195
10.1.7	Cycle Slips.....	195
10.2	L1 Carrier Loop Processing .....	195
10.2.1	Analog Base Band Model of L1 Carrier Loop.....	196
10.2.2	Loop Opened, Input Signal (Fin) is Constant, Loop Filter Input Is Zero.....	197
10.2.3	Loop Opened, Frequency Ramp on Input Signal at $t_1$ .....	198
10.2.4	$\delta\phi$ Is an Estimate of SV Acceleration with Respect to Receiver (on LOS).....	198
10.2.5	Loop Filter Is a Weighted Sum of Acceleration and Velocity Terms .....	198
10.2.6	All Digital Baseband Carrier Loop .....	199
10.2.7	Typical Loop Up-Date Relationships .....	199
10.2.8	Initial Value of $\Sigma\delta\phi_0$ .....	200
10.2.9	Slope of Accumulated Carrier Phase Can Be Reversed (i.e., Inverted Plot).....	200
10.2.10	Accumulated Phase Is Typically the Total Phase .....	200
10.2.11	To Extract Measured Phase Subtract Number of Cycles of the Nominal IF Rate.....	201
10.2.12	Units of Accumulated Carrier Phase Can Be in Cycles, Counts, Etc.....	201
10.3	Using the L1 and L2 Carrier Phase Dials to Create a New Dial .....	201
10.4	Analysis of the Measurement and Use of Total Integrated Carrier Phase $\Phi(t)$ .....	203

10.4.1	Analysis of Total Integrated Carrier Phase and Its Uses .....	204
10.4.2	Derivation of Total Integrated Carrier Phase .....	206
10.4.3	Differences and Ratios of $\Phi(t)$ 's .....	206
10.4.4	The Ratio of $\Phi_1(t)$ to $\Phi_2(t)$ .....	206
10.4.5	Single Carrier Difference of $\Phi(t)$ , or $\Delta\Phi(t)$ .....	207
10.4.6	Between Carrier Phase Differences, $\Phi_1(t)$ : $\Phi_2(t)$ (ratios and single differences) .....	209
10.5	Time Precision and Time Resolution in the Turbo Rogue Receiver .....	209
10.5.1	Disturbances to Carrier Phase, An Overview .....	211
10.5.2	Turbo Rogue Time Resolution .....	212
10.5.3	Turbo Rogue Time Precision .....	212
10.5.4	Internally Generated Phase Noise in the Turbo Rogue Receiver .....	214
10.5.5	A Base-Band Model of the Carrier Tracking Loop with Phase Quantization Noise As the Input .....	216
10.5.6	Estimates of Timing Jitter as Seen by Carrier Processing .....	218
10.5.7	Summary Sampled Phase Analysis for Turbo Rogue Receiver .....	219
10.6	Summary .....	220
	Reference .....	220
<b>11</b>	<b>JPL Turbo Rogue Receivers .....</b>	<b>221</b>
11.1	Turbo Rogue L1 C/A Receiver .....	221
11.1.1	A Mechanical Clock Model of Turbo Rouge L1 C/A Channel Processing .....	222
11.1.2	A Totally Coherent Design Using 20.456 MHz Master Oscillator .....	222
11.1.3	Residual Carrier and Code Phase Measurements .....	224
11.1.4	Carrier Phase Dial and Chip Dial, Phase Rate Measurements .....	224
11.1.5	Clock Synchronizer .....	224
11.1.6	Delay or Range Delay Estimate $\tau_{C/A}$ .....	225
11.1.7	Code Rate Is Tied to Carrier Rate .....	225
11.1.8	Why Is the Carrier Phase Rate, $\Delta\phi$ , Subtracted from the Nominal IF Frequency to Obtain the Code Phase Rate $\Delta\tau_{C/A}$ ? .....	225
11.1.9	20 ms Update Rate .....	226
11.2	A Synthetic 20 ms Dial Mechanical Model and the Time Tag .....	226
11.2.1	Getting Delay Estimates Using the Time Tags from 20 ms Synthetic Dial with SV Clock as Reference Clock .....	228

11.3	Turbo Rogue Processor Block Diagram.....	230
11.3.1	Down Conversion and Sampling .....	230
11.3.2	The Reference Clock .....	230
11.3.3	Accumulator Start/Stop Control, Processing .....	232
11.3.4	Carrier Phase and Code and Chip Dials.....	232
11.3.5	Absence of C/A Epoch Signal, 20 ms and 1-s Counters or Replica Dials.....	232
11.3.6	C/A Code Generator .....	233
11.3.7	Carrier Phase NCO Command Is Extracted from Total Integrated Carrier Phase.....	233
11.3.8	Phase and Rate Steered Carrier Phase Loop .....	234
11.3.9	Time Tag Information .....	234
11.4	Turbo Rogue Receiver DSP Calculations, Performance Overview .....	234
11.5	Details of DSP Computations Performed in the GP Processor.....	235
11.6	The Counter Rotator Term .....	239
11.7	A Summary of TR Time Tag and the Delay ( $\tau_{c/a}$ ) Observables .....	240
11.8	Summary .....	241
<b>12</b>	<b>The L2C Signal .....</b>	<b>243</b>
12.1	Introduction .....	243
12.2	L2C Signal History .....	243
12.2.1	Applications for L2C .....	244
12.3	L2 Signal Requirements .....	247
12.3.1	L2 Signal Structure .....	248
12.3.2	L2C Signal Description.....	249
12.4	L2C Navigation Data Demodulation .....	258
12.4.1	Legacy Navigation Data Message Framing Without FEC .....	258
12.4.2	Legacy Navigation Data Message Framing with FEC .....	259
12.4.3	Civil Navigation Data Message Framing .....	259
12.4.4	Viterbi Decoder .....	259
12.5	Observables .....	262
12.5.1	Pseudorange.....	263
12.5.2	Phase .....	266
12.5.3	Doppler .....	269

<b>Appendix A Sliding Correlators, Delay-Based Discriminators, and Processing Gain with GPS Applications.....</b>	<b>271</b>
<b>Appendix B Pseudo-Random Binary Codes and the C/A Code Generator .....</b>	<b>291</b>
<b>Appendix C BPSK Modulators and Demodulators .....</b>	<b>299</b>
<b>Appendix D Subframe Format.....</b>	<b>307</b>
<b>Appendix E Glossary .....</b>	<b>313</b>
<b>Index .....</b>	<b>325</b>
