

Contents

1	Preliminary Remarks on Vectors and Matrices	1
1.1	Vector	1
1.1.1	Definition	1
1.1.2	Operations	3
1.2	Matrix	8
1.2.1	Definition	8
1.2.2	Operations	10
2	Kinematics	19
2.1	Coordinate Frames	19
2.2	Position and Orientation	22
2.2.1	Vector Notations	23
2.2.2	Orientation	25
2.2.3	Position	28
2.3	Velocity	34
2.3.1	Linear Velocity	34
2.3.2	Angular Velocity	36
2.3.3	Relation Between Linear and Angular Velocities	40
2.4	Acceleration	42
3	Dynamics	61
3.1	Inertial Properties	61
3.1.1	Definitions	61
3.1.2	Theorems and Rules	68
3.2	Momentum	73
3.2.1	Linear Momentum	74
3.2.2	Angular Momentum	74
3.3	Force, Moment of Force, Torque, Work, and Power	80
3.4	Impulse, Work, and Power	82
3.5	Kinetic Energy, Potential Energy, and Mechanical Energy Conservation	84

3.6	Equations of Motion	90
3.6.1	Newton–Euler Formulation	91
3.6.2	D’Alembert’s Principle	110
3.6.3	Lagrange Equations	117
4	Case Studies	131
4.1	Two-Link Planar Robotic Arm	131
4.2	Human Body Doing Twisting Somersaults	138
4.3	Bicycle Balance	143
	References	151
	Index	153

A Concise Introduction to Mechanics of Rigid Bodies

Multidisciplinary Engineering

Huang, L.

2012, XII, 156 p., Hardcover

ISBN: 978-1-4614-0471-2
