Contents

1 Reaching for the Stars 1
1.1 Introduction 1
1.2 An Overview of Propulsion Schemes for Space 1
1.3 Practice Exercises 9
References 10

2 The Dream of Flight and the Vision of Tomorrow 11
2.1 Introduction 11
2.2 Becoming a Spacefaring Civilization 11
2.3 The Promise of the Future 14
2.4 Why We Shouldn't Go Out into Space 17
2.5 Why We Should Go Out into Space 20
2.6 Practice Exercises 26
References 26

3 Fundamental Limitations to Achieving Interstellar Flight 27
3.1 Introduction 27
3.2 How Much Speed Is Required to Reach the Stars? 27
3.3 How Much Energy Is Required to Reach the Stars? 35
3.4 Practice Exercises 37
References 38

4 Aviation: The Pursuit of Speed, Distance, Altitude, and Height 39
4.1 Introduction 39
4.2 The History of Propulsion in Aviation 39
4.3 The Physics of Aviation Propulsion 43
4.4 Practice Exercises 47
References 48

5 Astronautics: The Development and Science of Rockets 49
5.1 Introduction 49
5.2 The History of Propulsion in Rocketry 49

5.3 The Physics of Rocket Propulsion..... 54
5.4 Rockets for Space..... 61
5.5 Practice Exercises..... 74
References..... 75

6 Exploring the Solar System and Beyond..... 77
6.1 Introduction..... 77
6.2 Near Earth..... 78
6.3 The Colonization of Mars..... 81
6.4 Other Planetary Objects..... 88
6.5 Mining He-3 from the Gas Giants..... 93
6.6 The Outer Solar System..... 94
6.7 Practice Exercises..... 97
References..... 97

7 Exploring Other Star Systems..... 99
7.1 Introduction..... 99
7.2 The Stars and the Worlds Beyond..... 99
7.3 The Discovery and Evolution of Life..... 109
7.4 Practice Exercises..... 114
References..... 115

8 Solar System Explorers: Historical Spacecraft..... 117
8.1 Introduction..... 117
8.2 Precursor Mission Probes..... 117
8.3 Pioneer Probes..... 122
8.4 Voyager Probes..... 123
8.5 Galileo..... 125
8.6 Ulysses..... 126
8.7 Cassini-Huygens..... 126
8.8 Deep Space 1..... 127
8.9 Cosmos I..... 128
8.10 New Horizons..... 129
8.11 Dawn..... 130
8.12 Interstellar Boundary Explorer..... 131
8.13 Summary Discussion on Probe Design..... 132
8.14 Practice Exercises..... 136
References..... 137

9 Electric and Nuclear-Based Propulsion..... 139
9.1 Introduction..... 139
9.2 Electric Propulsion..... 139
9.3 Nuclear Thermal and Nuclear Electric Propulsion..... 144
9.4 The Interstellar Precursor Probe..... 146
9.5 The Thousand Astronomical Unit Mission..... 147

9.6 The Innovative Interstellar Explorer 149
9.7 Project Prometheus 151
9.8 Practice Exercises 153
References 153

10 Sails & Beams 155
10.1 Introduction 155
10.2 Solar Sailing 156
10.3 The Interstellar Heliopause Probe 164
10.4 Interstellar Probe 166
10.5 Beamed Propulsion 167
10.6 Beamed Microwaves and Starwisp 172
10.7 Problems 175
References 175

11 Nuclear Fusion Propulsion 177
11.1 Introduction 177
11.2 Fusion: The Holy Grail of Physics 178
11.3 Fusion Power for Space Exploration 184
11.4 The Enzmann Starship 189
11.5 Project Daedalus 190
11.6 Project Longshot 198
11.7 Project VISTA 201
11.8 Discovery II 203
11.9 Problems 205
References 205

12 External Nuclear Pulse Propulsion 207
12.1 Introduction 207
12.2 Nuclear Pulse Detonation and Project Orion 207
12.3 The Medusa Concept 215
12.4 Problems 217
References 218

13 Towards Relativistic Propulsion: Antimatter and the Interstellar Ramjet 219
13.1 Introduction 219
13.2 Relativity in Space Flight 220
13.3 The Interstellar Ramjet 223
13.4 The Bussard Ramjet Spacecraft Concept 226
13.5 Matter-Antimatter Annihilation 227
13.6 The AIMStar Spacecraft Concept 229
13.7 The ICAN-II Spacecraft Concept 231
13.8 Practice Exercises 232
References 233

14 Aerospace Design Principles in Interstellar Flight 235
14.1 Introduction 235
14.2 Principles of Aerospace Design 235
14.3 Systems Engineering Approach to Concept Design Studies 238
14.4 Technology Readiness Levels 243
14.5 A Concept Design Problem for a Precursor Mission Proposal 244
14.5.1 Scoping Concept Design Space 245
14.5.2 Concept Solution 248
14.6 Problems 261
References 261

15 The Scientific, Cultural and Economic Costs of Interstellar Flight 263
15.1 Introduction 263
15.2 The Advance of Science 263
15.2.1 Planetary Physics, Including Terrestrial and Giant Planets 265
15.2.2 Stellar Physics, Including Different Spectral Types 265
15.2.3 The Presence and Evolution of Life 265
15.2.4 The Physics of the Interstellar Medium 266
15.2.5 The Physics of the Kuiper Belt and Oort Cloud Layers of Different Stars 266
15.2.6 Galactic Structure, Cosmology and the Global Picture 266
15.2.7 Exotic Physics, Including Gravitational Issues 267
15.2.8 Engineering Design Issues Such as Spacecraft Reliability 267
15.3 Cultural Growth and the Rise and Fall of Civilization 271
15.4 The Economics of Space Exploration 277
15.5 Practice Exercises 284
References 285

16 The Role of Speculative Science in Driving Technology 287
16.1 Introduction 287
16.2 The Connection between Science and Fiction 288
16.3 Breakthrough Propulsion Physics and the Frontiers of Knowledge 291
16.4 NASA Horizon Mission Methodology 300
16.5 Problems 302
References 303

17 Realising the Technological Future and the Roadmap to the Stars 305
17.1 Introduction 305
17.2 International Co-operation in the Pursuit of Space 306

17.3 Establishing Precursor Missions and the Technological Roadmap for Interstellar Exploration 309
17.4 Project Icarus, Son of Daedalus, Flying Closer to another Star 312
17.5 The Alpha Centauri Prize..... 318
17.6 Problems 322
References 323

18 From Imagination to Reality 325

Epilogue 345

Appendix A..... 349

Appendix B..... 351

Appendix C..... 353

Appendix D..... 357

Index..... 361
