

# Contents

<b>1</b>	<b>The Major Definitions, Concepts and Auxiliary Facts</b>	<b>1</b>
<b>2</b>	<b>The Simplest Schemes of Generalized Solution of Linear Operator Equation</b>	<b>7</b>
2.1	Strong Generalized Solution	7
2.2	Strong Near-Solution	9
2.3	Weak Generalized Solution	10
2.4	Weak Near-Solution	12
2.5	Existence and Uniqueness of a Weak Generalized Solution of a Linear Operator Equation	13
2.6	Relation Between Weak and Strong Solutions of a Linear Operator Equation	14
<b>3</b>	<b>A Priori Estimates for Linear Continuous Operators</b>	<b>17</b>
3.1	A Priori Inequalities	17
3.2	A Generalized Solution of an Operator Equation in Banach Spaces	18
3.3	A Generalized Solution in Locally Convex Linear Topological Spaces	22
3.4	Relation Between Generalized Solutions in Banach and Locally Convex Spaces	25
<b>4</b>	<b>Applications of the Theory of Generalized Solvability of Linear Equations</b>	<b>29</b>
4.1	Application to the Equations with Hilbert–Schmidt Operator	29
4.2	Generalized Solutions of an Infinite System of Linear Algebraic Equations	36
4.3	Application to Volterra Integral Equation of the First Kind	44
4.4	Application to the Statistics of Random Processes	47
4.5	Application to Parabolic Differential Equation in a Connected Region	48
4.5.1	Problem Definition	49

4.5.2	Properties of Operators Associated with a Boundary Value Problem . . . . .	50
4.5.3	Generalized Solvability of the Boundary Value Problem . . . .	54
4.6	Application to Parabolic Differential Equation in a Disconnected Region . . . . .	56
4.6.1	Main Definitions . . . . .	57
4.6.2	Properties of Operators Associated with a Boundary Value Problem . . . . .	63
4.6.3	Generalized Solution of a Parabolic System with Discontinuous Coefficients and Solutions . . . . .	67
4.6.4	Approximate Method for Solving the Boundary Value Problem for a Parabolic Equation with Inhomogeneous Transmission Conditions of Non-ideal Contact Type . . . . .	69
4.7	On the Unique Solvability of Wave Systems . . . . .	80
4.7.1	Basic Notation and Statement of the Operator Equation . . . .	81
4.7.2	A Priori Inequalities: Main Case . . . . .	84
4.7.3	Analysis of the System on the Basis of a Single Chain of a Priori Inequalities . . . . .	89
4.7.4	Construction of a "Scale" of Solvability Theorems . . . . .	93
4.8	Projection Theorem for Banach and Locally Convex Spaces . . . . .	97
<b>5</b>	<b>Computation of Near-Solutions of Operator Equations . . . . .</b>	<b>103</b>
5.1	Construction of Near-Solutions . . . . .	103
5.2	Method of Neumann Series . . . . .	105
5.3	The Condition Number of Matrix . . . . .	109
5.4	Hotteling Method for Correction Inverse Matrix . . . . .	111
5.5	Exact Solving a System of Linear Algebraic Equations . . . . .	112
5.6	Solving a System of Linear Algebraic Equations with Guarantee Precision . . . . .	114
5.7	Characterization of a Classic Solution Using Neumann Series . . . . .	117
<b>6</b>	<b>General Scheme of the Construction of Generalized Solutions of Operator Equations . . . . .</b>	<b>125</b>
6.1	Generalized Solution of Linear Operator Equations in Locally Convex Topological Spaces . . . . .	125
6.2	Examples of Generalized Solutions . . . . .	131
6.2.1	Classical Solvability . . . . .	132
6.2.2	Generalized Strong Solvability . . . . .	133
6.2.3	Generalized Weak Solvability . . . . .	134
6.2.4	A Priori Inequalities . . . . .	135
6.3	Properties of the Generalized Solvability in the Spaces $E_1, E_2$ . . . .	135
<b>7</b>	<b>Concept of Generalized Solution of Nonlinear Operator Equation . . .</b>	<b>137</b>
7.1	Generalized Solution of Nonlinear Operator Equation . . . . .	137
7.2	Near-Solution of Nonlinear Operator Equation . . . . .	138

7.3	Existence and Uniqueness of a Generalized Solution . . . . .	139
7.4	Correctness of Generalized Solution . . . . .	139
7.5	Pseudo-Generalized and Essentially Generalized Solutions . . . . .	140
7.6	Relation Between Pseudo-Generalized and Generalized Solutions . .	144
7.7	Example of Operators . . . . .	148
7.8	Computation of Generalized Solution . . . . .	150
7.9	Uniform Structures and Generalized Solutions of Operator Equations . . . . .	152
7.9.1	Definition of a Generalized Solution of Operator Equation . .	152
7.9.2	Generalized Solutions and Embeddings of Uniform Spaces . . . . .	154
7.9.3	Examples of Generalized Solutions . . . . .	158
7.9.4	Generalized Solution of Operator Equation in Proximity Spaces . . . . .	160
<b>8</b>	<b>Generalized Extreme Elements . . . . .</b>	<b>163</b>
8.1	Examples of Generalized Extreme Elements . . . . .	163
8.2	Generalized Extreme Elements for Linear and Positively Homogeneous Convex Functional . . . . .	166
8.3	On Compact Embedding into a Banach Space . . . . .	173
8.4	Generalized Extreme Elements for General Convex Functionals . . .	177
8.5	Some Remarks . . . . .	187
	<b>References . . . . .</b>	<b>195</b>
	<b>Index . . . . .</b>	<b>201</b>

Generalized Solutions of Operator Equations and  
Extreme Elements

Klyushin, D.A.; Lyashko, S.I.; Nomirovskii, D.A.; Petunin,  
Y.I.; Semenov, V.

2012, XXII, 202 p., Hardcover
