1	Introduction.....	1
1.1	Self-Healing in Materials Science and Engineering.....	1
1.2	Surface Science and Tribology	4
1.3	Nonequilibrium Thermodynamics and Self-Organization	8
1.3.1	Classical Thermodynamic Potentials	8
1.3.2	Nonequilibrium Thermodynamics	11
1.3.3	Self-Organization	13
1.4	Self-Organization During Friction.....	14
1.4.1	Frictional Dynamic Effects	16
1.5	Composite Materials for Tribological Applications.....	17
1.6	Biomimetics.....	18
1.7	Summary	22

Part I Self-Healing Materials

2	Thermodynamic Principles of Self-Healing	
	Metallic Materials	25
2.1	Introduction	25
2.2	Thermodynamics of Self-Healing	28
2.2.1	Entropy of a Hierarchical System	28
2.2.2	Thermodynamic Forces that Drive Healing	30
2.2.3	Friction-Induced Degradation.....	32
2.2.4	Optimization of Healing	34
2.3	Self-Healing Metallic Systems.....	35
2.3.1	Damage Prevention by Precipitation in Under-Aged Alloys	36
2.3.2	Composite Materials Reinforced with Shape-Memory Alloys.....	40

2.3.3	Composite Materials Reinforced with a Healing Agent	44
2.4	Future Approaches	48
2.5	Summary	50
3	Case Study of Self-Healing in Metallic Composite with Embedded Low Melting Temperature Solders.....	53
3.1	Introduction	53
3.2	Modeling Self-Healing	55
3.2.1	Multiscale Effects of Crystal Grain Growth.....	55
3.2.2	Multiscale Nature of Degradation and Healing	61
3.2.3	Healing Agent Release by Fracture.....	66
3.2.4	Healing Agent Release by Heating and Melting	67
3.3	Entropy, Degradation, and Healing Rates During Self-Healing	68
3.3.1	Entropy and Degradation	68
3.3.2	Degradation and Healing	69
3.4	Validation of the Model for Self-Healing Al Alloy	71
3.5	Summary	73
4	Surface Healing: A Case Study.....	75
4.1	Introduction	75
4.2	Self-Organization at the Sliding Interface.....	76
4.3	Self-Healing at the Interface.....	78
4.4	Self-Healing of Voids in Plant Surfaces.....	83
4.5	Summary	84
5	Development of Metallic and Metal Matrix Composite Self-Healing Materials	87
5.1	Self-Healing Solders	87
5.1.1	Composition of Solders	87
5.1.2	Partial Melting and Solidification.....	89
5.1.3	Shape Memory Alloy-Based Healing of a Solder.....	90
5.1.4	Eutectic-Based Healing	91
5.1.5	Low Melting Point Alloy in Hollow Reinforcement.....	93
5.2	Off-Eutectic Healing System	94
5.3	Tests of Mechanical Properties	96
5.4	Shape Memory Alloy-Based Healing System	98
5.5	Healing by Low Melting Point Alloy Contained in Hollow Reinforcement.....	101
5.6	Precipitations of Supersaturated Solid Solution	103
5.7	Experimental Studies and Simulation with Account for the Effects of Gravity and Capillarity	105
5.8	Summary	122

Part II Self-Lubricating Materials

6 Friction, Wear, and Self-Lubrication	125
6.1 Friction and Wear as Manifestations of the Second Law of Thermodynamics	125
6.2 Contact of Rough Solid Surfaces	127
6.3 Dry Friction and Its Laws	131
6.4 Theories Explaining Dry Friction	133
6.4.1 Adhesive Friction	134
6.4.2 Deformation of Asperities	136
6.4.3 Plastic Yield	137
6.4.4 Fracture	138
6.4.5 Ratchet and Cobblestone Mechanisms	138
6.4.6 “Third-Body” Mechanism	138
6.4.7 Origins of the Linearity of Friction	139
6.5 Wear	144
6.6 Lubrication	145
6.7 Self-Lubrication	146
6.8 Summary	151
7 Thermodynamic Methods in Tribology and Friction-Induced Self-Organization	153
7.1 Introduction	154
7.2 Entropic Methods of Study of Self-Organized Tribological Systems	157
7.2.1 Qualitative Studies	158
7.2.2 Entropy During Friction and Dissipation	160
7.2.3 Thermally Activated Self-Organization	162
7.2.4 The Concept of “Selective Transfer”	166
7.2.5 The Concept of “Tribofatigue”	167
7.3 Friction-Induced Self-Organization	169
7.3.1 Running-In	169
7.3.2 Feedback Loop Model for the Running-In	173
7.3.3 Self-Organized Elastic Structures	178
7.3.4 The Problems of Combining Friction with Dynamics and Linear Elasticity	181
7.3.5 SOC and Avalanche Dynamics	182
7.3.6 Pattern Formation and Turing systems	184
7.4 Summary	193
8 Tribological Properties of Metal Matrix Composites	195
8.1 Introduction	195
8.2 Manufacturing Methods of MMC	199
8.2.1 Powder Metallurgy	199
8.2.2 Casting	200
8.2.3 Spray Deposition	200

8.3	Theoretical Basis for Understanding Friction and Wear Behavior in Composites	201
8.3.1	Friction and Thin Film Lubrication in Metal Matrix–Graphite Particle Composites	201
8.3.2	Wear in Composites Containing Solid Lubricants	203
8.4	Friction, Wear, and Seizure Behavior of Graphite Bearing Composites.....	205
8.4.1	Friction Characteristics	205
8.4.2	Wear Characteristics	209
8.4.3	Seizure Characteristics	215
8.5	Effect of Environmental Factors on Friction and Wear	216
8.5.1	Environmental Conditions and Lubrication	216
8.5.2	Wear in Electrical Contacts.....	218
8.5.3	Film Formation.....	221
8.6	Industrial Applications	224
8.7	Development of New Graphite Reinforced MMC Materials	227
8.8	The Role of Solid Lubricants	232
8.8.1	General Considerations	232
8.8.2	Nanoparticle and Microparticle Lubricants.....	232
8.8.3	Graphene and Diamond Carbon Additives	233
8.9	Summary	234

Part III Self-Cleaning Materials

9	Thermodynamic Foundations of Wetting and Capillary Phenomena	239
9.1	The Solid, Liquid, and Vapor Phases of Matter.....	240
9.2	Phase Equilibrium.....	241
9.3	Negative Pressure and Disjoining Pressure in Nanoscale Capillary Bridges.....	244
9.4	Water-Phase Diagram at the Nanoscale	249
9.5	Laplace Equation.....	252
9.6	Young Equation.....	254
9.7	Kelvin’s Equation.....	258
9.8	Osmosis and Osmotic Pressure	260
9.9	Capillary Effects During Contacts of Rough Surfaces and Stability Issues.....	262
9.9.1	Shape of the Meniscus	264
9.9.2	Capillary Force.....	266
9.10	Summary	273

10 Superhydrophobicity	275
10.1 Contact Angle with a Rough or Heterogeneous Surface	275
10.1.1 The Wenzel and Cassie Equations	276
10.1.2 Limits of Applicability of the Wenzel and Cassie Equations	278
10.2 Contact Angle Hysteresis	284
10.2.1 Causes of the Contact Angle Hysteresis	284
10.2.2 Pinning of the Triple Line	285
10.2.3 Contact angle Hysteresis and the Adhesion Hysteresis	286
10.2.4 Simulation and Semiempirical Models	289
10.3 The Cassie–Wenzel Transition	290
10.4 Effect of the Hierarchical Roughness	296
10.4.1 Wetting as a Multiscale Phenomenon	296
10.4.2 Hierarchical Roughness	298
10.4.3 Stability of a Composite Interface and Hierarchical Roughness	300
10.5 Reversible Superhydrophobicity	308
10.6 A Droplet on an Inclined Surface	311
10.7 Bouncing-Off Droplets	312
10.8 Summary	317
11 Lotus Effect and Self-Cleaning	319
11.1 Superhydrophobicity in Natural and Biomimetic Surfaces	319
11.2 Superhydrophobic Plant Leaves	325
11.3 Rose Petal Effect	326
11.4 Insect and Bird Wings	332
11.5 Lotus-Effect-Based Self-Cleaning	334
11.6 Titania-Based Superhydrophilic Self-Cleaning	335
11.7 Applications of Self-Cleaning Surfaces	336
11.8 Deicing and Icephobicity	338
11.9 Summary	341
12 Self-Cleaning in the Water Flow	343
12.1 Liquid Flow Near a Superhydrophobic Surface	344
12.2 Nanobubbles and Hydrophobic Interaction	346
12.3 Antifouling	347
12.4 Underwater Oleophobicity	348
12.5 Polymeric Materials, Filters, and Desalination	351
12.6 Summary	353

13 Artificial Self-Cleaning Surfaces	355
13.1 Techniques to Make a Superhydrophobic Surface	355
13.1.1 Roughening to Create One-level Structure.....	356
13.1.2 Coating to Create Hydrophobic Structures.....	359
13.2 Methods to Create Hierarchical Superhydrophobic Structures	360
13.3 MMC-Based Sustainable Superhydrophobic Surfaces.....	361
13.3.1 Modeling of Wetting of Composite Materials	362
13.3.2 Experimental.....	364
13.4 Polymeric Superhydrophobic Surfaces.....	368
13.5 Summary.....	370
14 Outlook.....	375
About the Authors.....	379
References.....	381
Index.....	409

Biomimetics in Materials Science
Self-Healing, Self-Lubricating, and Self-Cleaning
Materials

Nosonovsky, M.; Rohatgi, P.K.

2012, XXVI, 418 p., Hardcover
