1	Introduction to Radiowaves	1
1.1	Introduction	1
1.2	Radio Services	2
1.3	International Codes and Standards	3
1.3.1	Objectives	3
1.3.2	Class of Codes and Standards	3
1.3.3	Radio Regulations	4
1.3.4	ITU-R Recommendations	5
1.4	Basic Terms and Definitions	5
1.5	Classification of Radio Systems	6
1.5.1	Classification Based on Frequency Bands	6
1.5.2	Classification Based on Service Types	6
1.6	Radio Frequency Bands	7
1.6.1	Role of Frequency in Radio-communications	7
1.6.2	Classification of Frequency Bands	7
1.7	Application of Frequency Bands	9
1.7.1	ELF, ULF, and VLF Bands	9
1.7.2	LF Band (30-300 KHz)	9
1.7.3	MF Band (300-3,000 KHz)	9
1.7.4	HF Band (3–30 MHz)	10
1.7.5	VHF Band (30–300 MHz)	10
1.7.6	UHF Band (300–3,000 MHz)	10
1.7.7	SHF Band (3–30 GHz)	10
1.7.8	EHF Band (30–300 GHz)	11
1.7.9	Micrometric and Nanometric Bands	11
1.8	Frequency Allocation	11
1.8.1	Introduction	11
1.8.2	Frequency Registration	11
1.8.3	ITU Regions for Frequency Allocation	12
1.8.4	Frequency Assignment	12

1.9	Atmosphere Layers	14
1.9.1	Troposphere Layer	15
1.9.2	Stratosphere Layer	16
1.9.3	Ionosphere Layer	16
1.9.4	Magnetosphere layer	17
1.10	Designation of Emissions	17
1.11	Summary	18
1.12	Exercises	19
2	Basic Principles in Radiowave Propagation	23
2.1	Introduction	23
2.2	Transmission Media	24
2.2.1	Media Characteristics	24
2.2.2	Radiowave Velocity	25
2.2.3	Depth of Radiowave Penetration	26
2.3	Electromagnetic Waves	27
2.3.1	Maxwell Equations	27
2.3.2	Electromagnetic Waves Spectrum	28
2.4	Wave Equations and Spectrum	29
2.4.1	Plane Waves	29
2.4.2	Radiowave Spectrum	30
2.5	Media Effects on Radiowaves	30
2.6	Propagation Parameters	31
2.7	Radiowaves Polarization	32
2.7.1	Definition of Polarization	32
2.8	Main Types of Radiowaves Polarization	32
2.8.1	Basic Polarized Radiowaves	33
2.9	Radio Links	36
2.10	Free-Space Loss	37
2.10.1	Power Flux Density	37
2.10.2	Free Space Loss	38
2.10.3	ITU-R Formulas	39
2.11	Equivalent Radiated Power	42
2.11.1	Antenna Gain	42
2.11.2	ERP and EIRP	44
2.11.3	Electric Field Intensity	44
2.12	Transmission Loss	45
2.12.1	Loss Terms in Radio Links	45
2.12.2	Basic Transmission Loss	46
2.12.3	System and Total Losses	47
2.13	Radio Ray Path and K-factor	48
2.13.1	Curvature of Ray Path	48
2.13.2	K-Factor	50
2.14	Summary	52
2.15	Exercises	52

3 Radiowave Propagation in Troposphere	57
3.1 Introduction	57
3.2 Earth Atmosphere	58
3.2.1 Major Parameters	58
3.2.2 Lower Part of the Troposphere	59
3.2.3 Standard Earth Atmosphere	59
3.2.4 Non-standard Atmospheric Parameters	61
3.3 Radiowave Refraction	62
3.3.1 Refractive Index of Air	62
3.3.2 Wave Path and Effective Earth Radius	63
3.4 K-Factor	64
3.4.1 Definition	64
3.4.2 Variation Range of K-Factor	64
3.4.3 The Earth Bulge	66
3.4.4 Radio Horizon	68
3.4.5 Atmospheric Duct	69
3.5 Radiowave Attenuation in the Troposphere	77
3.5.1 Introduction	77
3.5.2 Rain Attenuation	78
3.5.3 Cloud and Fog Attenuation	81
3.5.4 Hail and Snow Attenuation	84
3.5.5 Aerosoles	85
3.6 Radiowave Reflection	86
3.6.1 Reflection Equations	86
3.6.2 Multipath Reception	89
3.6.3 Coverage Diagram and Height Gain Curve	92
3.6.4 Fresnel Zones	95
3.6.5 Fresnel Radius Calculation	96
3.7 Radiowave Diffraction	99
3.7.1 Introduction	99
3.7.2 Diffraction Parameter	100
3.7.3 Field in Diffraction Region	101
3.7.4 Field in Interference Region	102
3.7.5 Field in the Midpath Region	105
3.8 Attenuation of Obstacles	107
3.8.1 Obstruction Loss in Diffraction Condition	108
3.8.2 Obstructed Radio Path	111
3.9 Forest and Vegetation Area	112
3.9.1 Overall Views	112
3.9.2 VHF/UHF Frequency Bands	113
3.9.3 SHF/EHF Frequency Bands	116
3.10 Summary	119
3.11 Exercises	120

4	Radiowave Propagation in Ionosphere	127
4.1	Introduction	127
4.2	Ionization in the Ionosphere layer	127
4.2.1	Ionization and Plasma State	127
4.2.2	Ionosphere Layer Classification	128
4.2.3	Ionospheric Phenomena	129
4.3	Ionospheric Communications in MF/HF Frequency Band	131
4.3.1	Radiowave Propagation in the Ionosphere	131
4.3.2	Applications	132
4.3.3	Vertical Propagation in the Ionosphere	133
4.3.4	Inclined Propagation of Ionospheric Waves	135
4.3.5	Optimum Usage Frequency	136
4.3.6	Long-Distance Communications	138
4.3.7	Effects of D Sub-layer and Day/Night Frequencies	139
4.3.8	Time Delay of Different Transmission Modes	140
4.3.9	Solar Effects	143
4.3.10	Geomagnetic Field Effect	144
4.4	Ionosphere Effects on Satellite Communications	145
4.4.1	Main Effects	145
4.4.2	Ionosphere Ionization	146
4.4.3	Faraday Rotation	146
4.4.4	Group Delay	148
4.4.5	Dispersion	149
4.4.6	Scintillation	150
4.4.7	Frequency Dependence of Ionospheric Effects	152
4.5	Ionosphere Reference Characteristics	152
4.5.1	Introduction	152
4.5.2	Mapping Functions	153
4.5.3	Prediction of f_0F_2 and $M(3000)F_2$	156
4.5.4	Prediction of f_0E	156
4.5.5	Prediction of f_0F_1	159
4.5.6	Software Programs	160
4.6	Ionosphere Main Parameters	162
4.6.1	Main Indices	162
4.6.2	Sun Spot Numbers	162
4.6.3	Index Φ	163
4.7	Summary	165
4.8	Exercises	166
5	Propagation in 3 KHz to 30 MHz Band	169
5.1	Introduction	169
5.1.1	Applications	169
5.1.2	Evolution Trend	170
5.1.3	Main Considerations	170

5.2	Propagation in VLF/LF Frequency Band	171
5.2.1	Introduction	171
5.2.2	Radiowave Propagation in Seawater	171
5.2.3	Design Considerations	173
5.2.4	Submarine Vessel Radio Communications	174
5.2.5	Propagation in the Earth Atmosphere	178
5.3	Surface Wave Propagation	179
5.3.1	Introduction	179
5.3.2	Electric Characteristics	179
5.3.3	Electric Characteristics Variation	179
5.3.4	Waves Penetration.....	181
5.3.5	Effective Factors in Electric Characteristics	182
5.3.6	Received Power	183
5.3.7	Vertically Polarized Waves	183
5.3.8	Horizontally Polarized Waves	185
5.3.9	ITU-R Diagrams	186
5.3.10	Mixed Paths	192
5.4	Wave Propagation in MF/HF Band	193
5.4.1	Location of the Control Points	194
5.4.2	Screening Frequency for E and F2 Layers.....	195
5.4.3	Propagation Modes	196
5.4.4	Wave Elevation Angle	197
5.4.5	Field Intensity of Waves	197
5.4.6	Received Power	201
5.4.7	Signal to Noise Ratio	202
5.4.8	Lowest Usable Frequency	203
5.4.9	Design Considerations	203
5.4.10	Wave Propagation in MF Band.....	206
5.5	Summary	208
5.6	Exercises	209
6	Terrestrial Mobile Radio Propagation	215
6.1	Introduction	215
6.2	Diffractions Loss	217
6.2.1	Fresnel Zones	217
6.2.2	Basic Concepts	218
6.2.3	Diffraction of Spherical Earth	220
6.2.4	Obstacle Diffraction	224
6.2.5	Single Knife-Edge Obstacles	224
6.2.6	Single Rounded Obstacles	226
6.2.7	Double Isolated Obstacles	229
6.2.8	Multiple Isolated Obstacles.....	232
6.3	Propagation Environment in Mobile Radio Communications	234
6.4	Signal Level Variability	235
6.4.1	Introduction	235
6.4.2	Shadow	235

6.4.3	Location Variability	236
6.4.4	Time Variability	239
6.4.5	Location and Time Variability	239
6.4.6	Fade Margin	240
6.5	Polarization	241
6.5.1	Depolarization Effects	241
6.5.2	Polarization Diversity	242
6.6	Antenna Height	242
6.6.1	Outlines	242
6.6.2	Antenna Height Gain	243
6.6.3	Fixed Antenna Height Gain	245
6.6.4	Mobile Antenna Gain	247
6.7	Reflection and Multipath	247
6.7.1	Local Reflections	247
6.7.2	Correlation Between Main and Unwanted Signals	248
6.7.3	Multipath Fading	249
6.8	Time Delay Spread	249
6.8.1	Received Signal Time Delay	249
6.8.2	System Performance	251
6.9	Climate Effects	252
6.9.1	Index of Refraction	252
6.9.2	Climate Factors	252
6.10	Earth Effects	253
6.10.1	Seawater	254
6.10.2	Fields and Hills	254
6.11	Guided Radiowave Propagation.....	255
6.11.1	Radiowave Propagation in Tunnels	256
6.11.2	Leaky Feeders	257
6.11.3	Air Duct	257
6.12	Mobility Effects.....	258
6.12.1	Surrounded Areas	258
6.12.2	Body Loss	258
6.13	Media Conditions	258
6.13.1	Introduction	258
6.13.2	Main Factors	259
6.13.3	Received Power Equation	260
6.14	Received Signal Level	263
6.14.1	Introduction	263
6.14.2	Link Power Budget Equation	263
6.15	Area Coverage Prediction Models	266
6.15.1	Introduction	266
6.15.2	Classification of Models	266
6.15.3	Model Limitations	267
6.16	Basic Models.....	267
6.16.1	Theoretical Model.....	267
6.16.2	Simple Empirical Model.....	268

6.17	Applied Models	270
6.17.1	Bullington Model	270
6.17.2	Hata Model	272
6.17.3	COST 231-Hata Model	275
6.17.4	Lee Model	275
6.18	Summary	279
6.19	Exercises	280
7	Line of Sight Propagation	289
7.1	Introduction	289
7.1.1	Propagation Environment.....	289
7.1.2	Main Factors	290
7.1.3	Frequency Bands	290
7.2	Ray Trajectory	291
7.2.1	Radius of Radio Path Curvature	291
7.2.2	<i>K</i> -Factor	293
7.2.3	Earth's Atmosphere	294
7.2.4	Typical Values of <i>K</i> -Factor	295
7.2.5	Radio Path Profiles	296
7.3	Terrestrial Obstacles	300
7.3.1	Obstacles Types	300
7.3.2	Fresnel Radius.....	300
7.3.3	Diffraction Loss	301
7.4	Radio Path Clearance	302
7.4.1	Single Antenna Criterion	302
7.4.2	Two Antenna Space Diversity Criterion	303
7.4.3	Three Antenna Space Diversity Configuration	304
7.4.4	Minimum Antenna Height.....	304
7.4.5	Single Antenna Height.....	304
7.4.6	Antenna Space Diversity	304
7.4.7	Optimum Antenna Height	305
7.4.8	Antenna Around Clearance.....	307
7.5	Propagation Loss in LOS Radio Links	308
7.5.1	Communication Equation	308
7.5.2	Propagation Loss	310
7.5.3	Precipitation Loss	311
7.5.4	Cross Polarization Discrimination, XPD	316
7.5.5	Antenna to Air Coupling Loss	319
7.6	Design Criteria	319
7.6.1	Hypothetical Reference Circuit	320
7.6.2	Grade of the System	320
7.6.3	Availability and Unavailability Criteria	321
7.6.4	Quality Criterion	323
7.6.5	Performance Criterion	323

7.7	Fading of the Received Signal	324
7.7.1	Permanent Attenuations	324
7.7.2	Occasional Attenuations	325
7.7.3	Fading	325
7.7.4	Multipath	326
7.7.5	Over-Reach Reception	329
7.7.6	Fading Occurrence Probability	331
7.7.7	New ITU-R Method	334
7.8	Outage Time	341
7.8.1	Introduction	341
7.8.2	Fade Margin	341
7.8.3	Link Outage Time	342
7.8.4	Fade Margin Calculation	344
7.9	Design Considerations	344
7.9.1	Design Criteria	345
7.9.2	Radio Site Selection	345
7.9.3	Foundations and Earthling Network	346
7.9.4	Climate	346
7.9.5	Radio Path Inclination	346
7.9.6	Zigzag Path	347
7.9.7	Path-length	347
7.9.8	Antenna Around Clearance	347
7.9.9	Radio Sources	348
7.9.10	Precipitation	348
7.9.11	Improvement Techniques	348
7.9.12	Technical Calculations	349
7.10	Summary	349
7.11	Exercises	350
8	Selected Topics in Radiowave Propagation	357
8.1	Scope	357
8.2	Optical Radio Links	358
8.2.1	Introduction	358
8.2.2	Main Atmospheric Effects	359
8.2.3	Atmospheric Absorption	359
8.2.4	Atmospheric Scattering	360
8.2.5	Scintillation	362
8.2.6	Atmospheric Precipitation	363
8.2.7	Aerosol Absorption	366
8.2.8	Ambient Sun Light Effect	366
8.2.9	Visibility	367
8.3	Optical Radio Link Design	368
8.3.1	Design Calculations	369
8.3.2	FSO Link Design	374

8.4	Radiowave Propagation from 20 to 375 THz	377
8.4.1	Main Effects of Atmosphere	378
8.4.2	Absorption	378
8.4.3	Scattering	379
8.4.4	Turbulence	380
8.5	Propagation in Guided Media	381
8.5.1	Introductions	381
8.5.2	RF Leaky Cable	382
8.5.3	Waveguides	383
8.5.4	Fiber Optics Cable	386
Appendix 1 Logarithmic System of Units		397
1.1	Introduction	397
1.2	Definition	397
1.3	Basic Formulas	398
1.4	Common Logarithmic Quantities	398
1.5	Principles of Logarithmic System of Units	399
1.6	Advantages of Logarithmic System of Units	399
Appendix 2 ITU-R Recommendations P-series		403
Appendix 3 ITU-R Based Terms and Definitions Related to Propagation in Non-ionized Media		407
Appendix 4 Acronyms		413
