

Contents

- 1 Introduction** 1
 - 1.1 Principles of Operation 1
 - 1.1.1 The Joule–Brayton Cycle 2
 - 1.2 The Bypass Turbofan Engine..... 4
 - 1.2.1 Performance and Efficiency of Real Engines 7
 - 1.3 Operability Limits and Component Maps 8
 - 1.3.1 Compressor and Fan Maps 9
 - 1.3.2 Turbine Maps 12
 - 1.3.3 Ray Lines and Stall Margin 13
 - 1.3.4 Combustor Instabilities and Blowout 15
 - 1.3.5 Structural and Thermal Limits 15
 - 1.3.6 Overall Engine Operating Limits 16
 - 1.4 A Note on Total and Corrected Quantities 16
 - 1.4.1 Summary 18
- 2 Engine Models and Simulation Tools** 19
 - 2.1 Two-Spool Shaft Dynamics 19
 - 2.1.1 Model Construction from Cycle Deck Data 21
 - 2.1.2 Models from System Identification 22
 - 2.1.3 Engine Aging and Deterioration Modeling 22
 - 2.2 Commercial Modular Aero-Propulsion System Simulation 23
 - 2.2.1 CMAPSS Main Features 24
 - 2.2.2 Example 27
- 3 Engine Control by Classical Methods** 35
 - 3.1 Setpoint Control via EPR or Fan Speed 35
 - 3.1.1 Integral Control 36
 - 3.1.2 Compensator Design with the Root Locus 36
 - 3.1.3 Compensation in the Frequency Domain:
Manual Loopshaping 38
 - 3.1.4 Edmund’s Model-Matching Method..... 40
 - 3.1.5 Comparative Example 41

3.2	Shortcomings of Fixed Linear Compensator Designs.....	43
3.2.1	Parameter Variations Across the Flight Envelope	44
3.2.2	Engine Limits	46
4	Engine Control by Robust State Feedback	51
4.1	Overview of Multivariable Systems Theory	52
4.1.1	Example	52
4.1.2	Singular Values	53
4.1.3	The Infinity Norm of a Linear System.....	54
4.1.4	The 2-Norm of a Linear System	55
4.2	Robust State Feedback Synthesis	55
4.2.1	Polytopic Description of System Uncertainty	56
4.2.2	Nominal and Robust Stability	58
4.2.3	Quadratic Stability of Polytopic Systems	59
4.3	Performance Measures	60
4.4	LQR State Feedback Synthesis.....	61
4.4.1	LQR with Regional Eigenvalue Constraints	61
4.4.2	The Cheap LQR Problem and Performance Limits	62
4.4.3	LQR Robustness Properties	62
4.4.4	Polytopic Systems	63
4.5	\mathcal{H}_2 State Feedback Synthesis.....	63
4.5.1	Optimal \mathcal{H}_2 Synthesis	64
4.5.2	Polytopic Systems	65
4.6	\mathcal{H}_∞ State Feedback Synthesis	65
4.6.1	Polytopic Systems	66
4.7	$\mathcal{H}_2/\mathcal{H}_\infty$ Feedback Synthesis with Regional Pole Placement	67
4.7.1	State-Feedback Setpoint Regulation and Input Integration ..	68
4.8	Example: CMAPSS-40k.....	70
4.8.1	A Polytopic Description for the 40k Engine	71
4.8.2	Stabilizability of the Scaled Augmented Plant	71
4.8.3	Fixed-Gain LQR Design	72
4.8.4	Fixed-Gain LQR in CMAPSS-40k	73
4.8.5	$\mathcal{H}_2/\mathcal{H}_\infty$ Fixed Gain Synthesis: Polytopic Plant Model	75
4.9	Simplified \mathcal{H}_∞ Fan Speed Control.....	83
4.9.1	Mixed-Sensitivity \mathcal{H}_∞ Design	84
4.9.2	Frequency Weighting	86
4.9.3	Example: Mixed \mathcal{H}_∞ Synthesis: CMAPSS-40k	88
4.9.4	Summary	90
5	Gain Scheduling and Adaptation	91
5.1	Robustness, Scheduling, Adaptation	91
5.1.1	Input Scheduling	92
5.2	Standard Gain-Scheduled GTE Control	92
5.3	Linear Parameter-Varying Methodologies	95
5.3.1	Obtaining an LPV Decomposition from Polytopic Vertices	96

5.3.2	A Simple LPV Approach to Fan Speed PI Control	97
5.3.3	Other LPV Approaches	102
5.4	Overview of Adaptive Control	102
5.4.1	Relative-Degree 1 MRAC	104
5.4.2	Example: CMAPSS-1	105
6	Sliding Mode Control of Turbofan Engines	111
6.1	Motivation Example: On–Off Rocket Thruster Control	112
6.1.1	Adding Uncertainty and Disturbance	115
6.2	Multivariable SMC Regulator	120
6.2.1	Matched Uncertainties	120
6.2.2	Control Law Development	121
6.2.3	Reduced-Order Dynamics and Sliding Coefficient Selection	122
6.2.4	Utkin and Young’s LQ Method	125
6.2.5	SMC Regulator Example: CMAPSS-40k	127
6.3	SMC Output Setpoint Following	128
6.3.1	Example: Linearized CMAPSS-40k Model	133
6.4	Simplified SISO Integral SMC Design	136
6.4.1	Example: CMAPSS-1	137
7	Engine Limit Management with Linear Regulators	141
7.1	The Min–Max Limit Management Logic	142
7.1.1	Default Index Assumptions: Min and Max Operators	144
7.1.2	Static Properties of the Min–Max Arrangement with Dynamic Compensators	144
7.1.3	Example: CMAPSS-1	148
7.2	Basic Set Invariance Concepts	149
7.2.1	Positive Invariance of an Interval	150
7.2.2	Ellipsoidal Invariant Sets for Linear Systems	150
7.2.3	Invariance of a Half-Space	152
7.2.4	Ellipsoidal Operating Sets	152
7.3	Min–Max Limit Management with Integral State Feedback Controllers	154
7.3.1	Closed-Loop Behavior Under a Fixed Regulator	155
7.3.2	Closed-Loop Behavior Relative to a Fixed Index	156
7.3.3	Static Properties of the Min–Max Arrangement with State Feedback	157
7.3.4	Example: CMAPSS-1 Linearized Model	161
7.3.5	Transient Limit Protection Analysis	164
7.4	Example: CMAPSS-1 Linearized Model	169
7.5	Alternative Minimum-Interaction Design: \mathcal{H}_∞ Approach	170
7.5.1	Example: CMAPSS-1	170
7.5.2	Example: Ellipsoidal Invariant Set: CMAPSS-1 Linearized Model	172

7.6	Acceleration and Deceleration Limiting	174
7.6.1	“N-Dot” Control and Acceleration Scheduling	175
8	Engine Limit Management with Sliding Modes	177
8.1	System Description, Assumptions and Control Objectives	178
8.1.1	Control Objectives	180
8.1.2	Sliding Mode Control Laws	180
8.2	Behavior Under a Fixed Regulator	181
8.2.1	Determination of the Steady Regulator Index	182
8.3	Summary of Stability Properties	183
8.3.1	Stability: Min or Max Switching	184
8.3.2	Stability : Max–Min Switching	184
8.4	Invariance Properties: Limit Protection	184
8.4.1	Invariance Under Min Switching	185
8.4.2	Invariance Under Max Switching	185
8.4.3	Invariance Under Max–Min Switching	185
8.5	Additional Considerations	186
8.5.1	Limited Output Consistency	186
8.6	Design Process	187
8.6.1	MultiObjective Control: Mixed $\mathcal{H}_2/\mathcal{H}_\infty$ Feedback Gain Synthesis.....	187
8.7	Design Examples	189
8.7.1	Linearized Simulation Study	189
8.7.2	CMA PSS Implementation: Upper Limit on T_{48}	194
8.7.3	CMA PSS Implementation with Multiple Limit Regulators.....	196
8.8	Summary	200
9	Engine Limit Management with Model Predictive Control	203
9.1	Digital Control Systems and Zero-Order Hold Equivalents	204
9.2	Optimal Receding Horizon Control	208
9.3	Prediction Equations	210
9.4	Incremental MPC Formulation: Unconstrained Case	211
9.4.1	Example	214
9.5	Incremental MPC Formulation: Constrained Case	215
9.6	Example: Linearized CMA PSS-40k Plant at Ground Idle	218
9.7	Example: Nonlinear Engine Simulation: CMA PSS-40k	219
9.8	Addressing Computational Burden	225
9.8.1	Explicit MPC Implementations	225
9.8.2	Multiplexed Control	226
	Afterword	229
A	Time-Optimal Control of Fan Speed	231
A.1	Time-Optimal Regulator	232
A.2	Example	234
A.3	Minimum-Time Setpoint Tracker	235
A.4	Example: Setpoint Tracking	236

B Representative Linear Model Matrix Listings: 90k Engine 239

C Representative Linear Model Matrix Listings: 40k Engine 243

D Matlab Code for Linearized MPC Simulation 249

Glossary 253
