

# Contents

<b>1</b>	<b>Concepts and Constructs</b>	<b>1</b>
1.1	Representations of Groups . . . . .	2
1.2	Representations and Their Morphisms . . . . .	4
1.3	Direct Sums and Tensor Products . . . . .	4
1.4	Change of Field . . . . .	5
1.5	Invariant Subspaces and Quotients . . . . .	6
1.6	Dual Representations . . . . .	7
1.7	Irreducible Representations . . . . .	10
1.8	Schur's Lemma . . . . .	12
1.9	The Frobenius–Schur Indicator . . . . .	14
1.10	Character of a Representation . . . . .	16
1.11	Diagonalizability . . . . .	20
1.12	Unitarity . . . . .	22
1.13	Rival Reads . . . . .	24
1.14	Afterthoughts: Lattices . . . . .	25
	Exercises . . . . .	28
	A Reckoning . . . . .	37
<b>2</b>	<b>Basic Examples</b>	<b>39</b>
2.1	Cyclic Groups . . . . .	40
2.2	Dihedral Groups . . . . .	43
2.3	The Symmetric Group $S_4$ . . . . .	48
2.4	Quaternionic Units . . . . .	52
2.5	Afterthoughts: Geometric Groups . . . . .	54
	Exercises . . . . .	56

<b>3</b>	<b>The Group Algebra</b>	<b>59</b>
3.1	Definition of the Group Algebra . . . . .	60
3.2	Representations of $G$ and $\mathbb{F}[G]$ . . . . .	61
3.3	The Center . . . . .	63
3.4	Deconstructing $\mathbb{F}[S_3]$ . . . . .	65
3.5	When $\mathbb{F}[G]$ Is Semisimple . . . . .	73
3.6	Afterthoughts: Invariants . . . . .	77
	Exercises . . . . .	79
<b>4</b>	<b>More Group Algebra</b>	<b>83</b>
4.1	Looking Ahead . . . . .	84
4.2	Submodules and Idempotents . . . . .	86
4.3	Deconstructing $\mathbb{F}[G]$ , the Module . . . . .	89
4.4	Deconstructing $\mathbb{F}[G]$ , the Algebra . . . . .	91
4.5	As Simple as Matrix Algebras . . . . .	97
4.6	Putting $\mathbb{F}[G]$ Back Together . . . . .	102
4.7	The Mother of All Representations . . . . .	107
4.8	The Center . . . . .	109
4.9	Representing Abelian Groups . . . . .	111
4.10	Indecomposable Idempotents . . . . .	112
4.11	Beyond Our Borders . . . . .	114
	Exercises . . . . .	115
<b>5</b>	<b>Simply Semisimple</b>	<b>125</b>
5.1	Schur's Lemma . . . . .	126
5.2	Semisimple Modules . . . . .	127
5.3	Deconstructing Semisimple Modules . . . . .	131
5.4	Simple Modules for Semisimple Rings . . . . .	134
5.5	Deconstructing Semisimple Rings . . . . .	136
5.6	Simply Simple . . . . .	140
5.7	Commutants and Double Commutants . . . . .	141
5.8	Artin–Wedderburn Structure . . . . .	144
5.9	A Module as the Sum of Its Parts . . . . .	145
5.10	Readings on Rings . . . . .	147
5.11	Afterthoughts: Clifford Algebras . . . . .	147
	Exercises . . . . .	151

<b>6</b>	<b>Representations of <math>S_n</math></b>	<b>157</b>
6.1	Permutations and Partitions . . . . .	157
6.2	Complements and Young Tableaux . . . . .	161
6.3	Symmetries of Partitions . . . . .	165
6.4	Conjugacy Classes to Young Tableaux . . . . .	168
6.5	Young Tableaux to Young Symmetrizers . . . . .	169
6.6	Youngtab to Irreducible Representations . . . . .	170
6.7	Youngtab Apps . . . . .	174
6.8	Orthogonality . . . . .	179
6.9	Deconstructing $\mathbb{F}[S_n]$ . . . . .	180
6.10	Integrality . . . . .	183
6.11	Rivals and Rebels . . . . .	184
6.12	Afterthoughts: Reflections . . . . .	184
	Exercises . . . . .	188
<b>7</b>	<b>Characters</b>	<b>189</b>
7.1	The Regular Character . . . . .	190
7.2	Character Orthogonality . . . . .	194
7.3	Character Expansions . . . . .	203
7.4	Comparing $Z$ -Bases . . . . .	206
7.5	Character Arithmetic . . . . .	208
7.6	Computing Characters . . . . .	211
7.7	Return of the Group Determinant . . . . .	214
7.8	Orthogonality of Matrix Elements . . . . .	217
7.9	Solving Equations in Groups . . . . .	219
7.10	Character References . . . . .	228
7.11	Afterthoughts: Connections . . . . .	229
	Exercises . . . . .	230
<b>8</b>	<b>Induced Representations</b>	<b>235</b>
8.1	Constructions . . . . .	235
8.2	The Induced Character . . . . .	238
8.3	Induction Workout . . . . .	239
8.4	Universality . . . . .	242
8.5	Universal Consequences . . . . .	243
8.6	Reciprocity . . . . .	245
8.7	Afterthoughts: Numbers . . . . .	247
	Exercises . . . . .	248

<b>9</b>	<b>Commutant Duality</b>	<b>249</b>
9.1	The Commutant . . . . .	249
9.2	The Double Commutant . . . . .	251
9.3	Commutant Decomposition of a Module . . . . .	254
9.4	The Matrix Version . . . . .	260
	Exercises . . . . .	264
<b>10</b>	<b>Character Duality</b>	<b>267</b>
10.1	The Commutant for $S_n$ on $V^{\otimes n}$ . . . . .	267
10.2	Schur–Weyl Duality . . . . .	269
10.3	Character Duality, the High Road . . . . .	270
10.4	Character Duality by Calculations . . . . .	271
	Exercises . . . . .	278
<b>11</b>	<b>Representations of <math>U(N)</math></b>	<b>281</b>
11.1	The Haar Integral . . . . .	282
11.2	The Weyl Integration Formula . . . . .	283
11.3	Character Orthogonality . . . . .	284
11.4	Weights . . . . .	285
11.5	Characters of $U(N)$ . . . . .	286
11.6	Weyl Dimension Formula . . . . .	290
11.7	From Weights to Representations . . . . .	291
11.8	Characters of $S_n$ from Characters of $U(N)$ . . . . .	294
	Exercises . . . . .	299
<b>12</b>	<b>Postscript: Algebra</b>	<b>301</b>
12.1	Groups and Less . . . . .	301
12.2	Rings and More . . . . .	306
12.3	Fields . . . . .	314
12.4	Modules over Rings . . . . .	315
12.5	Free Modules and Bases . . . . .	319
12.6	Power Series and Polynomials . . . . .	323
12.7	Algebraic Integers . . . . .	329
12.8	Linear Algebra . . . . .	330
12.9	Tensor Products . . . . .	335
12.10	Extension of Base Ring . . . . .	338

<i>CONTENTS</i>	XV
12.11 Determinants and Traces of Matrices . . . . .	339
12.12 Exterior Powers . . . . .	340
12.13 Eigenvalues and Eigenvectors . . . . .	345
12.14 Topology, Integration, and Hilbert Spaces . . . . .	346

Representing Finite Groups

A Semisimple Introduction

Sengupta, A.N.

2012, XVI, 372 p., Hardcover

ISBN: 978-1-4614-1230-4
