

Contents

1	From Personal to Impersonal Exchange in Ideas	1
1.1	Introduction.....	1
1.2	The Economic History of the Patent System: Productivity	4
1.3	The Economic Principles of the Patent System: Exchange	7
1.3.1	A Market in Technology (Market Exchange)	7
1.3.2	A Contract with the State (Social Exchange).....	8
1.3.3	The Economic Principle of Trade in Technology	10
1.4	The Economic Structure and the Patent System: Specialization.....	11
1.4.1	Economic Organization and the Patent System	11
1.4.2	Management of Risk and Uncertainty as a Principle of Organizational Limits	12
1.5	Impersonal Exchange Mechanisms for a Market in Patents with Prices: Coordination	14
1.5.1	A Linear Contract.....	15
1.5.2	A Proposed Informal Theory for Linear Contracts and Prices	17
1.5.3	The Design Mechanisms for a Linear Contract	19
1.5.4	Strength of the Patent System, Legal Uncertainty and Presumed Validity, in the Economic Environment.....	22
1.5.5	The Role of Intermediaries, the “Dynamic Principle”, in the Economic Environment.....	23
1.5.6	The Technology Space – Searchable Technologies – In the Economic Environment	24
1.6	Econometrics for the Experiments.....	25
1.7	Experimental Economics: Studying What People Do	26
1.7.1	A Study of What People Do.....	26
1.7.2	What Can We Learn from Experimental Data	30
	References.....	32

2 A Dynamic Microeconomic System Design for Markets in Patents	35
2.1 Introduction.....	35
2.2 Institutional Learning in History and the Two-Dimensional Nature of the Patent System.....	37
2.2.1 A Competitive Market in Technology.....	37
2.2.2 Allocation of Risk Bearing and Risk Sharing.....	39
2.2.3 Historic Development	39
2.3 The Dynamic Microeconomic System Design	41
2.3.1 The Legal Environment.....	43
2.3.2 The Economic Environment	44
2.3.3 The Institutions	50
2.4 Informal Theory of Prices and Initial Hypotheses.....	54
2.5 Summary	58
References.....	59
3 Prices and Dynamic Gains in Markets for Patents: Experimental Study of Impersonal Exchange in Ideas	63
3.1 Introduction.....	63
3.1.1 The Patent System as a Trade System.....	65
3.1.2 Summary of a Price System on Patents	66
3.1.3 The Mechanisms Design Criteria.....	68
3.2 The Mechanisms: Details of the Institutions, the Economic and Legal Environments	69
3.2.1 The Endogenous Experimental Flow	70
3.2.2 The Trading Screens	72
3.2.3 Subject Payments, Endowments, and Special “Rules of the Game”	74
3.3 Overview of Experimental Design, Design Parameters, Market Performance, and the Sequence of the Experiment.....	75
3.3.1 Market Performance and Dynamic Gains Under High Validity.....	79
3.3.2 Experiments with Low Validity	94
3.3.3 Secondary Market Reallocation	98
3.3.4 Homework.....	100
3.4 Linear Prices, System Gains, and Potential Capital Allocation: Hypotheses and Empirical Results.....	101
3.4.1 Linear Prices Compared with Proposed Theory (Static Analysis).....	101
3.4.2 Comparison Between Institutions (Dynamic Efficiency)	107
3.4.3 Comparison Between Institutions (Heuristic Analysis).....	108
3.4.4 Gains from Trade (Dynamic Analysis).....	111
3.4.5 Capital Allocation (Calculation)	112

3.5	Summary and Conclusions: Prices and Dynamic Gains from Trade.....	113
3.5.1	Linear Prices and Informal Price Theory.....	113
3.5.2	Institutional Differences in Price Dynamics.....	115
3.5.3	Predictions of Prices.....	115
3.5.4	Gains from Trade.....	116
	References.....	116
4	Coordinating Inventing and Innovating Through Markets in Patents with Prices: Experimental Study of Institutional Behavior and Price Signals.....	119
4.1	Introduction.....	119
4.2	The Trading System.....	121
4.3	Isolation of the Problem.....	122
4.4	The Economic System: Details of the Institutional, Economic, and Legal Environment.....	123
4.4.1	The Flow of the Experiment.....	124
4.4.2	The Trading Screens.....	126
4.4.3	Subject Payments, Endowments, and Special “Rules of the Game”.....	128
4.5	Experimental Design, Design Parameters, Performance, and the Sequence of the Experiment.....	129
4.5.1	Coordination and Gains from Trade Under High Validity.....	131
4.5.2	Coordination and Gains from Trade Under Low Validity.....	136
4.5.3	Secondary Market Usage.....	137
4.5.4	Summary.....	138
4.6	Coordination, Hypotheses, and Empirical Results.....	138
4.6.1	Does Convergence Take Place?.....	138
4.6.2	Differences in WTS Between Institutions and Validity.....	138
4.6.3	Coordination.....	140
4.7	Conclusions.....	140
	References.....	141
5	Conclusions.....	143
5.1	Introduction.....	143
5.2	General Themes.....	143
5.2.1	Investigating Design Institutions Toward Impersonal Exchange in Ideas.....	143
5.2.2	How Risk is Shared in the Contract as Coordination Takes Place in a Market with Prices.....	144
5.2.3	Mechanism Design: The Integration of Information and Rules.....	144
5.2.4	A Dynamic Economic System.....	144

5.3	Experimental Results	145
5.3.1	Do Experiments Make Sense in a Complex Dynamic Environment Like the Patent System?	145
5.3.2	Why Are There No Organized Patent Markets Yet?	145
5.3.3	What Are the Main Theoretical and Experimental Results?	146
5.4	Further Research Propositions	149
	References	150
6	Policy Propositions	151
6.1	Policy Propositions	151
6.2	Future Research to Clarify Further Policy Issues	156
6.2.1	Role of Patent System in Development	156
6.2.2	Insurance	157
6.2.3	Trust Between Firms	157
6.3	Concluding Remarks on Experimental Research	157
	References	158
	Epilogue	159
	About the Author	165
	Appendices	167
	Bibliography	189
	Author Index	193
	Subject Index	195
